[CPA / PPD Tutorial #1 – How to double your earnings \(DLL Method\)](#)

Welcome to the first tutorial on the topic of CPA / PPD. Today we're going to talk about how to double your earnings, well not clearly double it, but there's something like 85% chance of doubling your earnings. You've probably heard a couple of ways of doing that, maybe you're using some of the ways already published at the moment, but this is something different. A total unique way of doubling your earnings, if you're into the Hacks, Keygens, Activators. Basically, let's say we're going to make a simple program with a progress bar. So you make the user download the password to unlock your program's ZIP/RAR archive, but why not make a double win? Well this is where my plan comes in play. If your program has progressbar in it, we can use that to our advantage. Let's say the progressbar reaches 78% then throws an error something like this:

[img]http://hackingsources.net/wp-content/uploads/2013/02/dllmissing.png[/img]

You've already completed a survey, and you already know how to complete another so doing another one in hopes to get the program working will be fairly easy right? Yes. However, some people don't really know how to set this one up, so follow me please. Open up your Visual Basic .NET fake program project, and add "Imports System.Threading" at the very top of the code. Please follow the image below with each line COMMENTED:

[img]http://hackingsources.net/wp-content/uploads/2013/02/finished.png[/img]

Enjoy guys! And please do not forget to visit my blog more often and check for new tips and tricks!

Lime Whips - February 22, 2013, 6:53 pm

Thanks i was looking for a keygen tutorial!

Note2 - February 22, 2013, 6:57 pm

Thanks for the nice comment Ted, if you have any problems please don't hesitate to PM me. A tip for you guys, instead of double tricking them and increasing your conversion rate, you could let him download the archive without a password. Once he opens the fake file or so called your hack, he'll reach up to 75 percent and he'll want those 25 remaining percents so damn much he'll do a survey for them. Basically, the same stuff but helps you in conversions!

blue++ - February 22, 2013, 6:58 pm

Any way you could get a link for the source file?

I'm too lazy to do anything right now.

Note2 - February 22, 2013, 7:00 pm

You have the source file on the blog, directly posted. Enjoy mate, only for the members of HF!

MARVID - February 22, 2013, 7:03 pm

Thanks, I will take a look into source.

blue++ - February 22, 2013, 7:04 pm

Didn't see that there.

Thank you.

Furloy - February 22, 2013, 8:10 pm

or just bind the program with ransomware and make them do a survey >:)
i dont have the heart for that :P
the first week i got my new computer i got that FBI moneypack shit. had to manually remove in safe mode, not fun.

Lime Whips - February 22, 2013, 8:39 pm

can someone help me I can find were VB is saveing lol

Capricious - February 22, 2013, 9:10 pm

Thanks for this script man, i was searching for such program! :-)

Also, how did you make this download button?
It looks attractive. I want to make few for my niches

aspirin - February 22, 2013, 10:36 pm

Thanks man I was looking for something like this.

Zalg0 - February 23, 2013, 2:08 am

(Feb 22, 2013 09:39 PM)Ted. Wrote: [\[CITE\]](#) can someone help me I can find were VB is saveing lol
Should be somewhere in your Documents.

Note2 - February 23, 2013, 3:31 am

It's in where the project is located + /bin/Release if you're building it, or /bin/debug if you're debugging the program. Also I have a pretty neat blackhat method that will get me up to 10,000\$ monthly, just gotta do a test today and see how much CR I'll get.

1337God - February 23, 2013, 4:41 am

Another great bost by Note2, nice thread mate.

Adolf Hipster - February 23, 2013, 5:36 am

Why not actually make it check if the file is there instead?

Note2 - February 23, 2013, 5:38 am

Why go through the hassle, because you're giving them a fake .dll file with a fake hack :)

Adolf Hipster - February 23, 2013, 5:41 am

(Feb 23, 2013 06:38 AM)Note2 Wrote: [\[CITE\]](#) Why go through the hassle, because you're giving them a fake .dll file with a fake hack :)
I dont see where the hassle is?

```
Code If IO.File.Exists(Application.StartupPath & "\fake.dll") Then
Msgbox("dl file")
else
'do whatever you want
End if
```

Note2 - February 23, 2013, 5:42 am

But why doing this? What's the point of actually writing a code to check if the dll is there or not?

Adolf Hipster - February 23, 2013, 5:43 am

(Feb 23, 2013 06:42 AM)Note2 Wrote: [\[CITE\]](#) But why doing this? What's the point of actually writing a code to check if the dll is there or not?

I dunno, maybe to infuse the thought that the file they downloaded actually wasn't fake and that it did something good

But hey, it's your choice, but I don't see why not.

Note2 - February 23, 2013, 5:45 am

It's not like they're gonna report your hosting to the feds, or report your file on the CPA/PPD network. Yes, it's not ethical but hey nothing is humanly ethical.

Adolf Hipster - February 23, 2013, 5:48 am

(Feb 23, 2013 06:45 AM)Note2 Wrote: [\[CITE\]](#) It's not like they're gonna report your hosting to the feds, or report your file on the CPA/PPD network. Yes, it's not ethical but hey nothing is humanly ethical.

You know, a clever computer user can easily locate the "Report" button on the download page as if I am not wrong, most of the PPDs have one.

But whatever, I just said this as a little tip.

Note2 - February 23, 2013, 5:50 am

Yeah, and a clever user wouldn't report the file knowingly that they downloaded an illegal 'hacking' tool, anyway thanks for the tip mate.

Legends71 - February 23, 2013, 6:28 am

I have better method than this, with my method I can force 1 people complete 4 times the survey

Note2 - February 23, 2013, 6:29 am

Yeah, tell us your apparent better method?

punkHD - February 23, 2013, 9:23 am

Good one man. It's useful for all PPD'ers if many people start implementing this.

By the way, how did you make that download button? It's very attractive. Would you mind sharing the source for it with me, please? Thanks in advance. :)

Asset - February 23, 2013, 9:30 am

(Feb 22, 2013 09:39 PM)Ted. Wrote: [\[CITE\]](#) can someone help me I can find where VB is saving lol It's saving in Documents/Visual Basic 20XX/Projects/YourProject/Bin/Release
