Thread: [Simple Cloudflare Resolver \[+Project\]](#)

PhunkTechH - February 24, 2013, 1:13 pm

Hey guys today I'm going to give out a simple cloudflare resolver I made. You will need:

- 1 Button(Resolve)
- 1 Textbox(Type Site)
- 1 Label(CF Link:)
- 1 ListBox(Shows IP's)

When you have finished you should get something similar to this:

Heres Code:

Imports System.Net

Public Class Form1

Dim Domains(9)

Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)

Handles Button1.Click

Domains(0) = "blog."

Domains(1) = "cpanel."

Domains(2) = "dev."

Domains(3) = "direct."

Domains(4) = "direct-connect."

Domains(5) = "ftp."

Domains(6) = "forum."

Domains(7) = "mail."

Domains(8) = "m."

Domains(9) = "webmail."

TextBox1.Text = TextBox1.Text.Replace("http://", "")

TextBox1.Text = TextBox1.Text.Replace("Http://", "")

TextBox1.Text = TextBox1.Text.Replace("www.", "")

TextBox1.Text = TextBox1.Text.Replace("/", "")

If TextBox1.Text = "" Then

MessageBox.Show("Please enter a domain! Remember: Leave out 'http://' and 'www.'")

Else

For Each Str As String In Domains

Try

Dim hostname As IPHostEntry = Dns.GetHostByName(Str + TextBox1.Text)

Dim ip As IPAddress() = hostname.AddressList

ListBox1.Items.Add(Str + TextBox1.Text + ": " + ip(0).ToString())

Catch ex As Exception

ListBox1.Items.Add(Str + TextBox1.Text + ": Not Found")

End Try

Next

End If

'Made by PhunkTechH'

End Sub

Private Sub Button2_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)

ListBox1.ClearSelected()

End Sub
End Class

Download the source Project Here: <http://www.mediafire.com/?i6sbjy2b6q5oe4>

Virus Scan Here:

Enjoy! ?

If you want to release your code, it's better to release it as a class/function so people can use it in their projects easily.

C3oI - February 24, 2013, 1:19 pm

i download it for the theme and delete it u know why

The theme wasnt built in it xD It shows that theme because of the theme on my pc.

C3oI - February 24, 2013, 1:26 pm

i know but i hope maybe alittle chance but

Yui Asuna - February 24, 2013, 1:40 pm

Can you use the CODE balise, please ? Thanks.

let me point out some things:

Code Dim Domains(9)

Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles MyBase.Load

End SubFirst, please specify the type of your Array. In this case, it's a String.

And why is this empty sub here ? It's a little mistake, but you should be aware of these little things ;)

netrosly - February 24, 2013, 1:51 pm

thanks mate, I might add this too my project, and if i do i'll add credit to you
