Thread: [If you want to remain anonymous while on the internet look no further.](#)

? ?Shiro - February 24, 2013, 6:32 pm

If you want to remain anonymous while doing things I can give you a quick rundown. There are three common ways to hide yourself while doing activities on the internet, these things are common and can easily be found on HF or other sites and they will hide your IP address from everyone who would normally have access to them. The first way would be to use a VPN. A virtual private network or (VPN) extends a private network and the resources contained in the network across public networks like the Internet. This is done by point to point tunneling through the line think of it like digging a secret hole down a giant toob. There are many good vpn's out there you can check the buyers bay I will give you two vpn's out there you don't have to use these but they are good. First is vpnreactor it is a great vpn trusted and you can get a free trial with a new account and continue getting accounts. Another is Anonymous VPN trusted seller and vpn I have never used it but the reviews and people who made it make it seem quite good.

1. <https://www.vpnreactor.com/default.aspx>
2. <https://hackforums.net/showthread.php?tid=2255945>

The next thing you could do is use a proxy server this is a website you physically will go to and when you go to it and it will ask you to enter in a url from there you will go to wherever you want and be hidden. This is done because you are using that websites IP not yours some sites are not safe so you will just have to look around to find an odd proxy. Last thing you can do is physically go else ware where you don't live and use their networks there. I think there are ways around this but I'm not entirely sure of all of them. Last thing I also have never tried this but you can use all three together to stay 100% hidden activate your VPN then go to a proxy site and last be on someone else's internet and you will never be caught if someone says otherwise please message me with this crazy IP finder because just getting around one is usually hard enough. Hope I helped and thanks for reading any questions feel free to PM me anytime. Stay hidden my friend and I wish you the best of luck.

I just keep seeing people post asking this question so I thought I would post this not the best but not the worst I expect this to quickly get no posts and go down this page for no one to see followed by more people asking this question but I will gladly answer them. Hope I could help at least 1 person out with this post it did take me a little bit to make. Good luck and stay hidden my friends. PS. if this did help you please post it kinda makes my day to know I helped someone.

This is nice and all but it's not really helpful. You need to do more than briefly explain it. You need to teach how they work.
