Thread: [SSL-STRIP - TUTORIAL](#)

**TheGrayAviator** - February 25, 2013, 11:51 pm

Hi Guys,

I just want to share this video on SSL-Strip that I found to be very easy to follow and understand.

The presenter on this video did a great job at explaining what SSL-Strip is and how to put it into practice.

I think this video will be of a great assistance for some users.

I had trouble seeing the video or link, on HF, with different browser's.  
Here's the link for anyone else experiencing the same issues.

**TheGrayAviator** - February 26, 2013, 2:18 am

@Thanks PandaSec for adding it to the Stickie, and I did mention it wasn't mine.

@Thanks Rafe\_D for providing the link, MyBBForum doesn't support the video player format I was trying to upload. That's why you couldn't watch on any of the web browsers.

**PinkPanther** - February 26, 2013, 9:43 am

Gotta love securitytube. Thanks for the share man.

**DBLue** - February 26, 2013, 10:15 am

Yea Pink, Security Tube is awesome. I like Vivek's videos very much.

I do have a question though. For people being attacked wouldn't it cause for some alarm that the expected https address shows instead http? I have run this before on my own pc's and router but never noticed the s missing! I was raised on Windows and was always told to look for the "lock". Maybe by not noticing I answered my own question. ?

Not so much that, but your browser could also send a warning message about the certificate being invalid. Which in that video, that didn't happen, but I have seen that happening before.

**sauron321** - March 15, 2013, 1:01 am

Its Vivek Ramachandran. Founder of Securitytube.net

**SoMuchMudkip** - May 25, 2013, 10:26 pm

Awesome video I was just about to post something similar until I found this thread.

The link if anyone is curious.

Had to click on the link to see how old it was. Might want to avoid tutorials from 2011. Now I'm no

expert on IPtables, but it looked like he was saying to route inbound traffic on port 80 to SSLstrip. I must not be reading that right. No one would try to strip SSL from HTTP. Anyway, it's a good DoS method for ~26% of websites.
