Thread: [\[TUT\] DarkComet Setup With Crypter and VPN](#)

Ray Reddington - February 26, 2013, 5:57 pm

In this tut, I will walk you through setting up your RAT (DarkComet) and other things like a Crypter and VPN.

1st: Setting up your Noip.com account: Go to <http://www.noip.com/> and click 'Sign Up '

Follow the steps on the website to make your account

Verify your account by logging in to your email and pressing the link they sent you

When you have logged in, go to 'Manage Hosts' Then 'Add Host'

For the host name you can put anything. But make sure, after, you choose the 'no-ip.org' option

Your IP Address should be entered by itself.

Leave everything else how it is and press 'Update Host'

2nd: Downloading the DUC No-IP Client: DUC download links:

Windows - <http://www.noip.com/downloads.php?page=win>

Once downloaded, extract, and log in to your No-IP Account.

When you log in, go to 'Edit Hosts'

"Check" the host you made and click save.

Press 'Refresh' and you are set. 3rd: Port forwarding Since Port Forwarding is a very common issue for people who try to set up their RAT, I have provided a link that guides you through it. All you need to know is some information about your router (Usually the black and white sticker with a bunch of numbers on it LOL) If you still do not understand how to port forward, look through HF and I'm sure you'll find a great guide.

http://portforward.com/english/routers/port_forwarding/routerindex.htm

If you know how to port forward, in this TUT, I will be using port 200. 4th: Setting up your DarkComet RAT

Downloading your DarkComet Rat.

MAKE SURE YOU DO NOT DOWNLOAD DARKCOMET VERSION 5.4

IT DOES NOT HAVE A SERVER FOR YOU TO BUILD.

I have provided safe download links for versions 4 – 5.3.1

(I suggest version 5.3 or 5.3.1)

<https://hackforums.net/showthread.php?tid=2632776>

Before you download, you might have to disable your AV and/or your Firewall. This is because it will detect the RAT as a virus. The links are safe so don't be afraid to download them.

Now, once you have disabled your AV/ Firewall, proceed with downloading the DarkComet.

Once downloaded, extract it. (I recommend to your Desktop for easy access but whatever you like, as long as it's in one folder)

Run DarkComet and Accept the Rights (At least skim through it * Haha okay*)

Once you have DarkComet open, head over to "Socket/Net" (Top right hand corner)

Right click on DarkComet and press "Add Port to Listen"

(Since I said I was using port 200, I will enter 200)

It should say "Listening"

(To check if you have done this correctly, head over to <http://www.canyouseeme.org/> and type in the port you used, I used 200) (If you get the message: Success: I can see your service on XXX.XX.XXX.XXX [X= my IP] on port (200) Your ISP is not blocking port 200.

Then it works. If not, it has failed and you need to look up how to Port Forward.

Now press in the top left corner " DarkComet – RAT"

Press "Client Settings" then go to "NO-IP Updater"

Fill the first line with the host you made (example.no-ip.org)

And the next two with your login info for No-IP

Press Update.

5th: Building the Server: Press DarkComet-RAT -> Server Module -> then Full Editor (Expert)

On Process Mutex, press Random a few times

Network Settings; Where it says "IP/DNS", put in your NO-IP Host name!

For the port, type in the port you port forwarded (in this case, I would type in 200)

Stub Finalization; Check "No compression" and "Save the Profile"

Press "Build the Stub" and save it.

Server is now built. 6th: Crypter/Binder: To make your server FUD, you WILL need a crypter.

The one I use is FileProtector and it is great. Great price, great options for the crypter, and it is FUD in most cases.

Link to the thread: <https://hackforums.net/showthread.php?tid=3203361&highlight=fileprotector>

Or the actual website: <http://fileprotector.net/>

\$20/1 Month; \$35/ 3 months; \$50 / 1 full year 7th: VPN: Last but not least, the VPN.

This step is not mandatory. Your RAT will work without it.

The reason behind a VPN for your RAT is if you are going to do "badass things" and want to be safe.

The VPN I use and I recommend is nVpn.

<http://nvpn.net/order.php>

This VPN allows you to open ports manually (you yourself) and it does not keep logs. This will keep you safe if you steal PayPal accounts, Steam accounts, and whatever else you may do. I suggest if you do things like this, uninstall the server from your slave so you can be sure you are safe.

To set up nVpn with DarkComet, you can refer to here for a great guide:

<https://hackforums.net/archive/index.php/thread-3060440.html>

Hope this helped guys ? . Enjoy!

This is my first tutorial so sorry if i messed up on a few things. LMK if you want me to fix anything!
Thanks ?

xx_redgh0st_xx - February 26, 2013, 9:32 pm

you didn't go over the crypting side... Google Chrome free n stable

willybobsta - February 26, 2013, 9:34 pm

No-IP IS NOT NECCESSARY!

I have tested it and it is not neccesary!

EpicAndrew - February 26, 2013, 10:01 pm

An automatic DNS update service is necessary and without it you would probably lose your slaves in an instant when your IP changes.

#Skyline - February 26, 2013, 10:04 pm

You're a idoit. It is necessary.

Then if it's not I'm going to ask you this question.

How the fuck does incoming ports to your router connect to your remote administration tool?

It's because it is necessary duh.

I will make a tutorial on how to use FileProtector soon :)

(Feb 26, 2013 10:34 PM)willybobsta Wrote: [\[CITE\]](#) No-IP IS NOT NECCESARY!

I have tested it and it is not neccesary!

Actually, No-IP is necessary since it is your host. Depending on what kind of IP address you have but at most times, you will need it.

I R Anonymoose - February 28, 2013, 7:45 pm

Is there a VPN that has open ports & doesn't have to be paid for? I already paid for [censored] but it doesn't open ports..

Ray Reddington - February 28, 2013, 7:47 pm

(Feb 28, 2013 08:45 PM)Unb?und Wrote: [\[CITE\]](#) Is there a VPN that has open ports & doesn't have to be paid for? I already paid for [censored] but it doesn't open ports..

I don't believe so. You can keep searching. You might find something but sometimes, paid things are the best. Though, considering nVpn is only \$6/month, it's a great price and works very well.

If you are going to be RAtIng on a normal basis, use FileProtector bc it lasts longer.

idealpoolsconst - March 3, 2013, 7:15 pm

Thank you ..

this was very helpful!!!

Ray Reddington - March 3, 2013, 8:30 pm

(Mar 3, 2013 08:15 PM)idealpoolsconst Wrote: [\[CITE\]](#) Thank you ..

this was very helpful!!! no problem. if you are still having trouble, feel free to pm me ?

I did go over it. What specifically are you talking about. Do you mean the options for FileProtector?

Jeryab - May 8, 2013, 2:10 am

very useful article, I just had trouble getting through vpn.

Who knows vpn with port forwarding, except nvpn?

UberNuberNEW - May 8, 2013, 2:22 am

Nice tutorial good luck

35chrctrssss..

MaikenBaiken32 - May 8, 2013, 2:24 am

Excellent tutorial! Keep up the good work man, I hope to see you will make other tutorials ;-)

You should get +1 from me :=)

Sommmen - May 8, 2013, 2:40 am

informative and precise.
could use some minor images tho :)

tang22 - May 11, 2013, 1:18 am

Great tutorial, well written, thank you.

8gold8 - March 20, 2014, 4:56 am

I did everything and my port is working cause I check on canyouseeme.org but users don't pop up

UNKNOWN - March 20, 2014, 6:28 am

Had trouble with port forwarding, i know how to do it and even had my friend try but it still didn't work from what i see

Kebabs - March 20, 2014, 6:33 am

nice tut bro, too advanced for me at the moment though

secretumpiratica - March 20, 2014, 8:07 am

Ardamax is a much better keylogger than this.

morrisonm6 - March 21, 2014, 2:56 am

thank you very nice. cold have explain more but enough info to get my feet wet thanks again

8gold8 - March 22, 2014, 5:52 am

Thank you,...
This was very helpful!

Dj Keylogger - October 11, 2015, 3:07 pm

Big mistake!
VPN does not keep logs. But no-ip keep!

This mistake is a reason why Cutefuzzypuppy in jail. Google him or find his profile here!

kaliowned97 - November 12, 2015, 1:59 am

Great job on the tutorial!
