Thread: [Save Page for user?](#)

La Manifesto - February 28, 2013, 6:30 pm

I am in the middle of making an image site and I have a like button on the pages. How would I check to see if they have already clicked the like button on the page?

Thanks in advance!

Racialz - February 28, 2013, 8:02 pm

Well you'd need to be logging the likes. So just check your database for a rating where the user & pic are the same.

Are you sure that's the only way to do it?

A facebook like button or a like button from your website? :)

SIM-1419016 - March 1, 2013, 3:00 am

When someone clicks the 'like' button, add their username to the list of users who have liked that picture.

If they unlike it, remove their name.

If they view the picture again, and their username is already in a list of users who have liked the picture, make "like" become "unlike"

Are you saying like each time someone likes a photo, create a new row in the table?

no, he was talking about a magical storage.

(incase you couldn't tell, yes he means create a new row for each image)
