Panel is easy to navigate and pretty quick.

I have a couple of suggestions;

1) Enable a function where the bots can be sorted by things like; country, uptime, newest to oldest..?

2) Add a stealer perhaps as a "premium" function to make things a bit tasty for members who can afford a "premium" subscription.

The ideas above are purely suggestions, not criticism. Anyhow, great work! +REP ?

Actually.. not correct, This way we give people the chance to trust our product and get familiar with it, if they decide we're reliable enough and provide what they need they have the option to extend.

Pendalum - March 4, 2013, 10:20 am

Ah, why don't you do just a 3 day trial then or free trial where it limits the amount of bots?

Are you guys counting the month package as 30 days or 4 weeks (28 days)?

If the 2nd is true, why would you buy 4 weeks (a month) instead of two 2 week subscriptions.

I'm asking because 2 weeks is 10.50 and 1 month is 22.50.

If the first situation is true (1 month = 30 days), then disregard this.

(Mar 7, 2013 04:12 PM)Dr. Maple Wrote: [\[CITE\]](#) IMO weekly plans aren't smart. Nobody would buy if they are hosting bots.

This is mainly to let them try, they could always extend if they wish to.
Would be unfair if we offered only 1 month and if the user does dislike a web-based rat he would've wasted his money.

And the people that mainly host bots could instantly purchase one month if they wish to.

Few questions for OGKush.

Does the server drop itself into a folder? Does the server add itself to startup? I am just a little curious, cause i keep seeing slaves come and go, so Im just wondering if they are just pressing Delete to delete the file/folder they downloaded.

The server copies itself 3X into 3 different locations and then executes itself.

It cannot be deleted, if it does get deleted it re-executes itself again.

Many have tried when they tested the rat on themselves and weren't able to uninstall it.

And yes, we keep it 100% FUD, we update the stubs each week or earlier if needed.

Doesn't matter, we will increase our servers depending on the amount of bots under control.. At the moment we have around 800+.

Snapz - March 10, 2013, 8:20 am

Does the panel have a bot selector to d/e a file to a specific amount of bots??

Tutelary - March 10, 2013, 8:39 am

Is the stub precrypted? Meaning, if it becomes detected and we crypt it once more, it will corrupt? If so, you should have an option to make an unencrypted server for this reason.

It's either To-ALL or to an individual. We might add X amount option soon.

You cannot crypt it yourself, we keep the stubs updated and maintain them 100% FUD it's all preset.

The server copies itself 3x on the victims computer and re-executes.

Hopefully this answered your question.

Just purchased and I am surprised. I expected half of what I got, It has a wonderful layout with a Fud server premade for you, some nice options to Download and execute specific files to your slaves.

This is going to be perfect for what I need.

I'm going to be a returning customer ;)

How would I use this to view their screen in real time, like other RAT's. And how do I "bind" my file, I don't understand, Can I bind it to a .png or .jpg? if not what kind of file and how do i go about making it look more legit.

Oh P.S This isn't fud, tried infecting my laptop which is using McAfee, then I tried it while using AVG, both times it alerted unless I disabled it, shame because I only just bought this.

When you reFUD the Server.exe will you automatically update our slaves? Or do we have to update them manually?

EDIT: Also i have a suggestion: We should be able to give each generated Server.exe a different "Build Name" and to show this "Build Name" next to the Bot in the List or anywhere else in the Statistics. It would be interessting to test different Spreading Methods and record Statistics.

Make the calculation, Executable RAT is around 30-40\$ A crypter is around 20-30\$ (A good one) Lets you would at least pay 60\$ to get a RAT and have the ability to keep your server FUD.

Compared with our price that's a lot more, especially because with us no additional costs are required to be able to fully use the product.

Bought this RAT and it's unbelievably stable, works great!
Panel is easy to navigate and pretty quick.

I have a couple of suggestions;

- 1) Enable a function where the bots can be sorted by things like; country, uptime, newest to oldest..?
- 2) Add a stealer perhaps as a "premium" function to make things a bit tasty for members who can afford a "premium" subscription.

The ideas above are purely suggestions, not criticism. Anyhow, great work! +REP ?

Still not FUD for me.

And when it's binded it's like 5 AV's that detect it.

Every time I see this thread, I come sooo close to buying it. It's REALLY tempting. It's kinda pricy though. Get it down to 10\$ per month and then we'll talk.

Ugh I can't help it... I'm probably gonna buy this anyway. I will for sure if it can be lowered to 10\$ a month. For now, is there anyway I can get some kind of trial before purchasing so I know I'm not making a mistake? If so, please PM me the details. Thanks in advance.

We usually have to update once ish 2 weeks, it stays FUD for a very long time.
The rat is Web-based, PHP , JS , ect..

We tend to keep this running until we reached the top ;) and hopefully for ever.

A direct download to the .exe file you want executed, like downloadthisfile.com/executethisfile.exe
That is a direct link, because if you click it you will download it without see any other page, or click a download button.

Just got this and could not be more pleased. Works fantastic.

Question on use of the bind tool though, how do I bind it to a .exe game and have the game still be functional?

I binded it to a .exe (I think) and it popped up with an error. Injected the RAT easily enough, but looked fishy because the game didn't work. I could social engineer my way around this, but it'd be easier if I knew the correct method.

Thanks, 10/10

press (Bind) choose file must be .exe then wait for the page to load
if you see (Unbind) that mean your file bind successfully
now send your 39 KB server to anyone if he have internet it will download and run the file you bind

my advice to bind it with file size range 50 ~ 2000 KB for faster run

Why did you add your silent bitcoin miner into it?
It kind of sucks now because now we as the buyers can't mine bitcoins.

There is no bitcoin miner on any of the customers their bots, i only use a bitcoin miner on personal bots herded by me and OMARATION.

No reason to worry, the issue happened due to the stub using a large amount of CPU caused by a loop problem, this should be all fixed now.

Regards, OG Kush.

To uninstall yourself, use the "Cure" option in the plugin tab on yourself.

And for your other questions; they will have to use download*execute on their own bots using your direct download to your stub.

It's to bind.. let's say uhh you have a fake software you made with .net or delphi or whatever, by using the bind tool you can bind your stub (server) with that fake software so whenever the software is opened, they will get infected as well.

/MsfConsole - April 14, 2013, 6:05 am

I am very interested in this rat since its an all in 1 rat no need to crypt, no-ip and portforward but my question is this functions like any other rat right? e.g darkcomet, blackshades etc only difference is its web based?

how many bots can this hold?

i ask cause i plan on using foxy SJDB on my facebook page with 200k likes normaly average to get 2-5k likes on 1 pic thats posted on the page witch means alot of bots for me. Is your rat available to hold couple thousand bots?

ryoh - April 14, 2013, 5:51 pm

Another question; are you going to implement a keylogger and live video?

I want to spread through their facebook accounts, but there is no way to get log in info...

EDIT: Oh. You have a keylogger.

You should make it so it keyloggs everyone, like send to all, so you dont have to enable individual.

Probably isn't FUD, or your buddy didn't send them.

Most likely the first one.

Emilia Clarke - April 27, 2013, 11:02 am

all fixed now :D talked to xH20s, thanks again man really apprecate it

xh20s,

Quick question, in the changelogs it says "please use website uploader for run and upload" (my upload & run hasn't been working with ge.tt links)

Where can I find the website uploader/how can I fix my upload & run function??

On a similar note, could you add 2 functions?

1) Delete cookies

2) A password stealer (like it steals it from saved passwords in browsers)?

uploader link is : <http://www.tw4r.com/index.php?do=uploader>

and these function will be added soon :)

I have been having issues with the download and execute function as many others have also. when i use the inbuilt uploader and then paste the link in the download and execute window it just shows a bar and then nothing happens. i know the program i am executing is fully FUD and works fine as i have tried it on multiple pc's. if there isn't some secret trick i believe it's broken and needs fixing

putting those two issue aside, how would you rate the overall functionality/effectiveness of the RaT?

lets say i maybe expected a little to much but this is my thoughts so far.

It's great not having to crypt but sucks dick to browse files because it takes forever to load and thats the general issue most of the time. If you are making a keylogger for a rat why would you not make it a panel??? instead you get to download logs from t in txt format. also it lacks a video function or remote desktop. So far i think it's a great idea but in it's current state i can't recommend it but im very interested in the future of the project as i can see this evolving alot as it's still pretty new.

Cakeb\$\$\$ - May 4, 2013, 10:36 am

Ok xH20S resolved my issue or it just figured itself out because now The download and execute feature is working just as advertised

J????ce - May 4, 2013, 2:58 pm

It's currently at 2 / 46

Also, can you explain the binding fully? I don't get it.

Also, where can I find more plugins ? And how do I botkill?

Dragoon0309 - May 4, 2013, 9:06 pm

Should add DDOS as a feature:)

otherwise awesome

Snowflake1337 - May 5, 2013, 4:57 am

Just bought this, looks great, but isn't it any program?
