Thread: [Darkcomet](#) | [Tutorial](#) | [Noob Friendly](#) | [Detailed](#)

Phoeni? - March 3, 2013, 1:19 am

Hey HF, I just made a Detailed Tutorial about setting up Darkcomet RAT, All credits goes to ME ?

note :This Tutorial is for Educational Purposes only, use the information at your own risk! I am not responsible if you use this knowledge for unethical purposes.

This tutorial would teach the following things

- >Setting up No-Ip Client
- >Setting up Darkcomet RAT
- >Making a stable stub
- >Some tips on spreading

I won't be teaching you how to port forward though you can refer to this thread to learn about port forwarding [Here](#)

Why Darkcomet ?

DarkComer-RAT [as] one of the very best around, it is totally free to use and allows you to control many remote machines at the same time using hundreds of functions (webcam streaming, desktop streaming, micro streaming, keylogger, MSN control, system control, etc, etc.)

DarkComet is also considered as the most stable RAT around and it is even regarded more stable than some professional ones (profesional is another word for not free). Why would you spend even one dollar on a RAT when you can have better one for free ?" (Quoted from DarkComet Website)

Things we need:

NO-IP Account and DUC

Darkcomet v5.3 (Any older version will also work)

Download links :

[No-Ip Client](#)

Darkcomet v5.3 :

<http://sharesend.com/download/62s36u4b>

Older versions can be found [here](#)

Lets begin:

Step 1.

Setting up No-Ip

Spoiler ([Click to View](#))

Go to <https://www.noip.com/>
and make an account there

After that head over to your E-mail id in order to confirm your account
You'll get a confirmation E-mail, Just click on the link to confirm the account.

Now Download [DUC](#)

Install it on your PC, Then run it after that Log into your no-ip account.

Click Edit Host

After that a dialogue box will pop-up, Check mark your Host in it

After that Just minimize the DUC and head over to Step2.

Step 2.

Setting Up Darkcomet.

[Darkcomet V5.3](#) (or any other version)

Spoiler ([Click to View](#))

open up Darkcomet.exe and Click on Darkcomet-RAT

Then click on Listen to a new Port

Enter any desired number, for ex. 100 - > then hit [b]Listen[b]

Then again click "Darkcomet-RAT" --> then click Client Settings

Edit the settings,

Now close the "Settings" window and click on Server Module --> Full edition(expert)

Your server is now ready. You will need to crypt it first. Get it crypted from a crypter in the "Cryptography Section" or you can find someone doing it for free in the "Free Services and Giveaways" section or better still you can buy a crypter from the "Marketplace" of this section.
Some recommended crypters Free crypters are

--> [Tyna Crypter](#)

NOTE:

1. Never run your server on yourself because it can kill your firewall and Fixcomet doesn't always work. If you do run it then go through this tutorial . You can test your server in your sandboxie or in a

VM.

2. The inbuilt No-Ip client on darkcomet doesn't work not more, use the external no-ip client (DUC)
3. If you have problems portforwarding, or your router is too old and doesn't support portforwarding use a VPN that supports portforwarding - [here](#)
4. Some recommended Spreading methods are Torrent, Chatrooms, Youtube method. You can read about them [here](#)
- Other guides for spreading can be found [here](#)
6. In order to test your RAT you can follow my my tutorial located [here](#)

Please leave Feedback or if you feel something is wrong in the tut Let me know ?
Hope you like it
Regards ?

Will sure help some. :) Thanks for the compliment ?
Hope it help the folks around here.

Revcode - March 3, 2013, 3:34 am

This is nice tutorial dude, good job!

sikander007 - March 3, 2013, 3:41 am

ok..i m facing strange problem with dc..i use minimum setting option...when i chk window installation and when i run that server in sandbox it work and get detected...but when i infect myself it dint pop up in client..when i uncheck that option it works perfectly on sandbox and when i infect myself... sever make with window installtion>on sandbox working and detecting>infecting myself not wotking without > working on both ways..
hope i explain it clearly :)

Phoeni? - March 3, 2013, 3:58 am

aniruddha0101 - March 5, 2013, 7:15 am

thank you very much sir. this is the best tutorial and you are best :)

Tutelary - March 5, 2013, 7:24 am

Good tutorial, and even though you mentioned to not use them if you plan to add startup, a note saying, "It will corrupt if you crypt it." would be nice.

Phoeni? - March 5, 2013, 7:26 am

Ho?u? - April 1, 2013, 5:12 am
Very good tutorial PhoniX!
Thank you! =)

89dogg - April 1, 2013, 10:07 am
great tut. this will help many users

hachev - April 1, 2013, 11:38 am
very good tutorial, so the darkcomet no-ip thing doesn't work, makes sense now.

Tibs - April 2, 2013, 7:55 am
thank you very much for this good tutorial

Sky123 - April 2, 2013, 7:57 am
Nice tutorial bud. Goodjob, looking good.

Phoeni? - April 3, 2013, 6:59 am
(Apr 1, 2013 11:38 AM)hachev Wrote: [\[CITE\]](#) very good tutorial, so the darkcomet no-ip thing doesn't work, makes sense now.
yes its outdated, just download DUC as instructed in the tutorial and everything is good to go.

Youch - April 3, 2013, 7:19 am
Great tutorial really helped me out, the only problem is I want my stub to be disguised an image. Is there anyway I can make it so if the victim opens the stub it would open a legitimate picture and also make the stub undetectable to anti virus programs? (Preferably free programs, yes I'm so poor atm xD) Thanks!

Phoeni? - April 3, 2013, 7:21 am
(Apr 3, 2013 07:19 AM)Youch Wrote: [\[CITE\]](#) Great tutorial really helped me out, the only problem is I want my stub to be disguised an image. (Preferably free programs, yes I'm so poor atm xD) Thanks!
This option is possible with Darkcomet with the Binding option but the problem is its highly undetectable, So I recommend you to get a crypter that is FUD and has a binding option in it.

Youch - April 3, 2013, 7:37 am
Thanks for the quick response, could you recommend any free crypters that would get the job done? Thanks again.

Phoeni? - April 3, 2013, 7:42 am
(Apr 3, 2013 07:37 AM)Youch Wrote: [\[CITE\]](#) Thanks for the quick response, could you recommend any free crypters that would get the job done? Thanks again.
The free one umm go for Ageis crypter people say it is decent one.

Youch - April 3, 2013, 7:43 am
Thanks very much for the help, so once it's crypted and I've bound a file to it. Is there anyway I can make the file size appear as that of a normal sized picture? Thanks.

Leg4cy - April 3, 2013, 7:46 am

Nice tutorial, easy to follow definitely simple enough for any experience level to follow

Desigeae - April 3, 2013, 8:06 am

Once I've infected a computer and am using a lightweight crypter with no melt/hide function, what would happen when the slave deletes (for whatever reason) the file ive sent them?

Connection lost?

Phoeni? - April 3, 2013, 8:08 am

(Apr 3, 2013 08:06 AM)Desigeae Wrote: [\[CITE\]](#) Once I've infected a computer and am using a lightweight crypter with no melt/hide function, what would happen when the slave deletes (for whatever reason) the file ive sent them?

It depends upon how FUD is your file, and mate this is a tutorial thread not a support thread ?
