Really interesting, interested in buy: sorry for the question, but this is the newest Infinity Crypter a brand new crypter ?

How is the size of the stub ? [since I know AutoIT crypters creates big size output files]

Thank you :)

Visuals - March 3, 2013, 6:59 am

Adding you on skype, may be interested.

This is a different crypter than Infinity. Infinity coded in .NET is still being developped, and this new one is coded in ASM/AutoIt.

Stub size is arround 320 KB.

Cape - March 3, 2013, 8:32 am

Vouch for DeMoNi & Element Protector.

Good luck on sales.

PedroDJ - March 3, 2013, 11:16 am

Last question: are you the coder ? :)

Raz?r - March 3, 2013, 11:21 am

Vouch for DeMoNi he is a great guy!

But i don't think that you are able to crypt autoit files, they are not cryptable because of the interpreter.

Decompile - March 3, 2013, 12:19 pm

Nice protector here mate.

Been looking for something coded in AutoIt.

Good luck with sales.

Currently no startup option, I would have to code it in ASM, will see if I can do it for the next update.

eCoLoGy - March 5, 2013, 3:20 am

Amazing job Demoni.

As other users said Startup is a very important option in a Crypter.

I really want to buy this one also but first it has to have the Startup option.

Looking forward to get it.

You can simply use your RAT's or bot's startup, it will work smoothly.

(Mar 5, 2013 04:06 AM)DeadLine Wrote: [\[CITE\]](#) This looks amazing. Can I ask you to crypt something as a test?

Is Element working in virtual enviroment (I use a VPS w. Windows 2008 Server) ?

Any chance of getting a trial version ? Unfortunately I purchased long subscriptions for Cube Crypter and Absolute Crypter and both is giving an excellent "FUD" rate of 5/35.

Perhaps Cube Crypter And Absolute Crypter creators are referring to FUD word as in Fuck Undetected Dependencies ?

Infinity is coded in .NET with a stub of 50kB, Element (this one) is coded in ASM/AutoIt with a stub of around 320kB.

I want a discount because my name is Elements :P GLWS

DI?E - March 29, 2013, 8:21 am

This crypter kicks ass! Very low detection rate if at all not to mention there is no need for additional programs to crypt your server just the Element Crypter. Good support as well. Demoni was very informative and polite. I highly recommend this crypter to those thinking of which one to buy. I spent the \$20 to try it out and I will wind up purchasing it all year long if it stays at this rate. Good job guys and good luck with sales!

DI?E - March 29, 2013, 9:25 am

0/35 all day long! ? Damn it feels nice to be stealth ?

Hedex - March 29, 2013, 2:56 pm

This crypter is awesome if you know what you're doing. Getting 100% FUD crypts no problem. Cannot believe the price for non-dependent stubs.

itzrobertbrooooooooooki - March 29, 2013, 8:39 pm

I added you on skype but you haven't been on? I signed in and it says "No license could be found" I was just on it yesterday. My account is NoSettings

That's right...

(Mar 29, 2013 05:45 AM)ElKosiri Wrote: [\[CITE\]](#) does this have an extension spoofer ?

No, but I can give you an external tool to spoof your crypted server.

For those getting detections, please remove your posts before having your licence banned. And PM me or contact me on skype for the right config.

I also advise to not use UPX at the moment, it adds detections.

(Apr 1, 2013 07:35 PM)Rip.2013 Wrote: [\[CITE\]](#) So should i buy Element Protector or Infinity crypter..?

Depends on your preference, this one has no dependencies and Infinity has a small .net 2.0 dependency (96% of PCs have .net) I'm thinking about getting Element today.

Vodge - April 2, 2013, 7:09 am

Looked through a few crypters and this seems like a good high quality choice. Definitely thinking about purchasing today or tomorrow.

Just bought it, for the first time on HF when it says instant delivery it was actually true!

Brutal Chaos - April 2, 2013, 8:40 am

Just purchased this, received it instantly, I'll post my testimonial after testing it using DarkComet.

It's %100 FUD, if anyone needs help with settings let me know, I completely vouch for this product, now all that's left is to see how quickly the updates happen when detections occur but DeMoNi has always been great with those!

This one is without dependencies, but doesn't work with .NET files.

Infinity is .NET 2.0.

I love infinity crypter, but I was very curious to try a no dependencies crypter... and I run into Demoni again! If this works as good as Infinity, then I will purchase yet another one of your products

Maybe a stupid question- with infinty I can save as a .pif file. Does Element Protector only save in a .exe?

Hey Demoni, a few questions before I get this

Do it works with betabot ? Is startup and AVKiller of Betabot intact even after crypting ?

What is current FUD status ?

Do you offer private stubs ? How much for ? (I would really like to always pay and get private stubs
for my major releases)

Have bought 2 crypters in last 5 days, 1 totally messed up betabot even though it said it works and
other is not as FUD as advertised

There's no start-up feature in the crypter itself as you can use the one in your server.

Unlike .NET crypters, Element Protector actually supports the start-up of the input file.

If you'd like to purchase - Feel free to contact either me or DeMoNi. ?

Element Protector never had any issues and even when it got detected, it had maximum 2-3 detections.

We automatically update the cloud stub once the crypter is detected.

There are some programs that uses EOF (End Of File) and in term to get them crypter, you must add a special function to the stub to support it.

The EOF support checkbox refers to an activation of the EOF support function.

I think an increase in price is reasonable if it can really stay FUD because once it's detected, the patch might not come in time before the anti virus.

Secondly will it be possible for us to set the "Original Filename", it's saying autoit (obvious)

Any guide to using icons? Anyway Thank you for this crypt. Hope it works out well.

The prices will increase dramatically very soon.

I'm not sure what do you mean by saying "Original Filename" but if it's something that's related to the Assembly Information, you can change it either via the crypter it self or via Resource Hacker. Google it.

The stub can stay FUD more than a week.

There's a mutual stub for all customers although we have a very small customers db and we are very strict with our customers and ban those who are being caught in doing Crypting service, scanning on VirusTotal alike sites.

The quality of the customers and the actual unique & advanced stub code reflects in the FUD time and reputation.

Contact me to purchase.

Currently buying private stubs is irrelevant.

But, we still have a very long average FUD. (considering to the other crypters)

Big respect for support team. Today is FUD again (I can see they even fixed it esterday). Hey Demoni/Angelic

Is there any new stub update ? A File I crypted 5 days ago now shows 5/35 on Elementscanner site, it was 0/35 5 days ago

Also, I think there is a bit of problem on scan results as even though ES reports 5/35, some AV which are stated as "OK" are still detecting files

I got around 23 users reporting me on my site about files being detected as Trojan (though I told them it's a game crack so ofc AV will detect it) but still just wanted to know if there is a bug in scan results and if there had been any stub update since 5 days so that I shall recrypt my files as well.

Also, I am not sure from where someone reported it, but there were 2 reports stating that the files are 14/43 by users, do diff scan sites will have diff AV scan results (like diff versions and all) ?

PS: Vouches for the crypter, first time ever saw files being detected :P And its assembly feature is just pawn@\$\$

AV's detect the website itself, not the crypted file.

The fact that your website is detected is obviously not our problem.

14/43 ? The only websites that supports so many AV's are the websites that distribute the files to the AV companies.

ElementScanner's Anti-Viruses's engines are up-to-date.

It's literally impossible what you're saying here.

Well I reported what my users commented in my game releases

Also, what do you mean by my site is detected ? :/ I just clearly mentioned what AV detected were the files not the site or such

Anyways, I scanned the file on ES which I crypted 4-5 days ago and its now 5/34

So I wanted to ask had there been a stub update since then as then I would just recrypt the files and reupload the games if there is so

Also, what do you mean by my site is detected ? :/ I just clearly mentioned what AV detected were the files not the site or such

Anyways, I scanned the file on ES which I crypted 4-5 days ago and its now 5/34

So I wanted to ask had there been a stub update since then as then I would just recrypt the files and reupload the games if there is so http://scan4you.net/result.php?id=f066f_4egp7t

Wow... cant believe you, 3 days ago you asked me for help with betabot's cryption and I helped that guy you linked me to, I leave vouches in your thread and even suggest Element to anyone and everyone who ask me for my crypter choice with Betabot or any bin in PMs and other threads

Even with all this I am doing just because I feel this crypter worthy of it and like it, yet I am the one sales trashing just because I had a few doubts I wanted to confirm (not even complaining)

And here is my scan result just to show you in case you still think I am speaking BS

You must check the start-up option in the server builder itself and after the crypt it will still work.

Custom Icon doesn't work at all...

You keep reiterating to 'use your server builders start-up options' yet as soon as i have them enabled then encrypt, I run in sandboxie and it fails to connect every time. As soon as start-up options are disabled, it crypts FUD and connects fine. Care to provide some insight?

EDIT: I don't mean to make this sound rude or anything, I'm not doubting its functionality. Just more of me trying to figure out what i could possibly be doing wrong as it all seems extremely straight forward...

It's because they are .NET Framework depended.

Element Protector doesn't support (currently) this type of files.

Just waiting for the custom start-up if you guys can add that...

Phwaakfc - May 4, 2013, 11:14 pm

Just coming back to post that my problem appears to have been lying in the .ico file that i was trying to use. Element Protector was crashing rather than actually finishing, hence the crypted file not being able to connect to the server.

All seems to be working fine now, with start-up options enabled and a custom icon. Working pretty damn good now :) Thanks a lot

Working Now.

10th Day into using this Crypt, It gets detected every few days and it's too late to update the crypt in time for detection = lose your clients. Definitely not one for long term FUD.

Good for short term FUD , Hit and Run.

The least you can do is to update your crypt every few days before it gets detected?

It's impossible to predict detections.

We are doing our best to maintain the crypter and it's detections and we will keep doing so.

I'm thinking about importing a new hidden feature into the crypter that will help us to extend the FUD time. I won't get into details though.

Use WesternUnion OR MoneyGram instead of LR because they will need time to fix issue and that both payment methods I mentioned are very fast and easy and secure too. ?

If you're experiencing a "server offline" error message, you should consider flushing your DNS, restarting your PC and redownload the crypter.

If it still doesn't work, there may be something that blocks it and you might want to try to run it on a different PC. (ofcourse you'll need a HWID reset)

Leaving forever - June 1, 2013, 3:49 am

the issue we're talking about has nothing to do with netseal, it happens once you are already logged into the crypter and attempt to crypt a file. Numerous people I know are having this problem. Last week I could get it to work if I kept trying a bunch of times but this week no success at all. Does support have any ideas why this is happening?

Well the error persisted for over two weeks now, it is good I only purchased the one month and I am not satisfied as it is a waste of money. This is not a netseal problem because I used netseal for other purposes and it is working well. I flushed the server several times, when it is finally okay and I crypt it is

not fud with either norton or avast or both. I complained though and I was told that is a minor detection. waste of money indeed.

jorinator - June 17, 2013, 3:36 am

does it update itself, or do you have to click something while starting the crypter, because now I have 6/35, yesterday 4/35, it's getting more and more detected. The lowest number I've had in a week was 1/35.

Why my license from element protector and IPKiller has expired...
I paid enough money for JDB, Crypter and IPKiller and i'm the only one with this problem!

Give me please refund or reactivate my license now

Does this crypter works with the avast sandbox?

cowok_kerenz - June 25, 2013, 8:10 am

iam buy decrypter from Angelic Wings, his service very bad.

to much promise, i ask when the crypter will update he say will update today just waiting.

almost everyday i ask to him and the answer still same, and then i saw here demoni the op of this program talk if he have exam and will away for 10 days. what the fuck!!!

why Angelic Wings promised like thats ? very bad sales service.

today i ask him if he can help decrypt my exe.

after i send him my exe file, then he send me back file decrypted exe. i check with scanner its fud 0/35 but when i run the exe i didnt see my install mesagge setting.

i know thats its my crypted file, he was trying to send me his exe.

hes legit because send my crypter after i buy from him. but everything is bad.

be aware with him.

InVista - July 24, 2013, 9:08 am

I discovered another incident of my post being deleted by a system bug probably.
Here is again a repost.

The official HF Loser this week is DeMoNi.
Congrats for this at first.

Price achieved by: giving pathetic non adult commented reps, and he couldn't: he didn't take part in this particulair thread at first.

He just read something, paid hf for getting the option to rep and actually has no idea what he is doing, let alone why he has repped at all.

Here is the thread:

<https://hackforums.net/showthread.php?tid=3629638>

There was kind of a conversation going on between 2 members and, if you going to look, look who called the first four-letter word and who replied therefor in response.
One gave the other a rep and, he was in the thread and this could happen.
DeMoNi read this and decide to rep me too. DeMoNi didn't took part in this thread at all.
Therefore: DeMoNi gave me a JUNK rep.

And therefore:

And meant again: Congrats!

InVista.

P.s.

Better check this link: <http://elitecracker.com/> Awesome guy, no doubt about DeMoNi, really not.

DeMoNi is really a trustworthy guy to pay your money to and buy from.

still unable to use the crypter. I get "Unable to initialize license file" error right after running it. Any solution?

kingsbig2001 - August 6, 2013, 8:04 am

Since this crypter is Autoit will it be ok to use for. Net server files

gspike4u - August 6, 2013, 8:28 am

does it have startup function and it really bypass proactives like kis avira norton avast
