Thread: [New Skype Tool - Opinions/Ideas/Suggestions wanted](#)

Ever0n - March 3, 2013, 12:57 pm

I'm currently taking a course at college in software development so I want to hone my coding skills so as a small project I've decided to make a Skype Tool as a form of practice. I know there are a bunch of them already out there but I want to make one that doesn't always crash and actually has a bunch of cool features.

All I need to know right now if there is anything specific that you guys/girls would want to see in a new Skype tool. I've got a bunch of features already sorted out and most of them coded which I'll list below. Any opinions would be great and if I can get everything sorted out quick enough I'll probably be releasing a beta version in a week or so.

I'm going to be calling it HazMat, if anyone has any better ideas I'm open for suggestion but unless its awesome, HazMat will probably stick.

Here are the features I have already coded or intend to:

Basic Skype functionality (Call, Message, Online Status, Display Name, ect..)

Call Spamming (Call user, hang up after 2 seconds, rinse and repeat until user decides to stop)

Message Spamming (Pretty self explanatory)

Quote generator (Create fake and yet perfectly genuine Skype quotes)

Friend list information (Dump friend list data that includes most information available on a Skype profile into a CSV file(?))

I've been toying with the idea of including a Skype Resolver but at the moment I'm not sure, all the ones I've been using as far seem to be on and off with their functionality and the cheapest API I've seen so far is \$12 a year, so I'll be considering this but it isn't a definitive feature.

Any more ideas would be appreciated. Thanks ?

Yui Asuna - March 3, 2013, 1:04 pm

Why the point of this ?

Oh yeah, another awesome Skype Tool. My heart is full of happiness. It's the best day of my life, like if Tweety asked to be my wife (Still waiting, darling :()

No, seriously, post it when you are done if you want, but WHEN YOU ARE DONE, not before !

Ever0n - March 3, 2013, 1:07 pm

I'm looking just mainly for suggestions or ideas for features people want.

Yui Asuna - March 3, 2013, 1:09 pm

You understand that your program isn't unique, right ?

So try to think outside the box ? Even it will probably be hard, because it's just a useless skype tool, but, who knows ?

Ever0n - March 3, 2013, 1:11 pm

Yeah I know there are floods of Skype tools, that was the idea to think outside the box and add something that actually makes it different and reasonably useful as hard as that might be.

shock_y0 - March 3, 2013, 1:16 pm

very pointless.

i can do this all with skype. why i need an extra program?

Ever0n - March 3, 2013, 1:18 pm

You can't create fake quotes in Skype nor can you effectively spam message/call users as far as I'm aware and like I said, for me this is mostly just for practice and learning.

?YY? - March 3, 2013, 3:30 pm

There are already enough skype tools.

SunFaker - March 4, 2013, 3:24 am

Nice idea with quote faker :). I have intress!

Vincent1468 - March 4, 2013, 5:24 am

You could make a feature where your Skype tool automaticly responds to messages that are send to the user.

For example if someone says 'hey' to you, the Skype tool replies with 'Hey! This an automatic response!'

Also, could you send me the source of the quote generator? I'm intrested in seeing how that works.

The other idea for this is to help others learn, when it is finished the source for everything will be released, so far I'm also commenting near enough every line so that when people do go through it they understand what each line of code actually does.

That's very nice to hear, do you already have a release date?

heartbreaker - March 4, 2013, 7:41 am

1. i think u can add some type of chat emotion pic which is very help chaating

2. two step verification when some one open his id user got a message on his /her mobile with confirmation code and then after applying with that code open his id

Not yet, its more of a project I'm working on among college and work. Depending on the complexity of some the features people recommend I shouldn't think longer than a week.

deputy. - March 6, 2013, 12:14 am

How about Colored Skype statuses? I think I've seen something like it before.

?eumonic - March 6, 2013, 12:16 am

If you need to learn something for your Skype tool, be sure to check mine out.

Has a ton of shit to learn from, and doesn't look bad doing it. ;P

Thanks, I've seen yours, its really nice. It has the kind of useful feature set I'm trying to achieve so it looks like it will be a good reference.
