Thread: [Updating listview data overwrites all the data](#)

Snoepie1012 - March 5, 2013, 9:48 am

Sup guys

I made a application that would retrieve information from my Mysql database and put it in a Listview (Under categories such as name, email, ...)

I made it so when you double click a data line in the Listview a new form would open with textboxes with the data in it so you could edit it.

However when you edit some data and then click the 'Save' button all the listview items are changed (Not just the line you double clicked but also the data under it)

My code to change the listview item:

```
Code Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs) Handles Button1.Click
```

```
    Dim con As MySqlConnection = New MySqlConnection("Data Source=localhost;Database=fca;User ID=root;Password=;")
    strsql = "Update informatie set Naam = '" & TextBox1.Text & "', Bijvoegsel = '" & TextBox2.Text & "', Achternaam = '" & TextBox3.Text & "'"
    Dim da As New MySqlDataAdapter(strsql, con)
    da.Fill(ds)
    Me.Hide()
```

```
    Form2.list()
End Sub
```

Hope someone can help me! If you need more information just ask.

Thanks!

Just load all the information into a listview (without MySqlAdapter) and then use SqlQueries to update, save, delete, add, etc. It's so much easier.

Yes I was already thinking about doing that, but how would I edit that single line and not everything :/

MySQL Queries.. Like I said.

Code UPDATE WHERE
