Too many help desks now a days. Nice intention, but don't expect too many replies.

True, But I help to TRY MY BEST! :p

trail - March 6, 2013, 10:22 pm

can u provide me step by step hacking way like which method i should apply first. i know all methods like footprinting ,sniffing, hijacking etc but got to know which method will give me exact information in simple way by using effective application.

m very confused how to start if network is totally unknown for us then what things we should apply first.

thanks in advance

Since it says you wanted to start a method, first go here:

<https://hackforums.net/showthread.php?tid=792171>

This will teach u everything.

PS. English no GOOD. If I have misinterpreted your question, reply again.

I currently have an ardamax keylogger fully setup to send... But the problem is that I need to make it undetectable by anti-virus's... Can you give me a hand?

Terry A. Davis - March 6, 2013, 10:57 pm

So you say fast, dude if you want to make a help desk you should really make it "better" show what you can do and such

slade01 - March 6, 2013, 11:06 pm

Is there a way I can get these passwords? hottnatcat@yahoo.com
wolffang_60@yahoo.com

Get a FUD Crypter. There should be free ones available. Go roam around HF

hottnatcat@yahoo.com

wolffang_60@yahoo.com Keyloggers, Rats or Bruteforcing. For more info, PM Me.

Keyloggers, Rats or Bruteforcing. For more info, PM Me.

I looked but uhm, can you suggest me one of the best on HF? I'm pretty confused.

Also, I'd be interested to find some e-mail / Photobucket passwords too... Send me a PM? :D - I'm trying to learn.

There's a Free Crypter There :D

awesomefuntimelol - March 7, 2013, 2:00 am

Vouch for the hacking support, the lessons really helped and looking forward to buying lessons. :)

That isn't FUD, unless of course no kids have scanned it on virustotal in 3 months (last post edit)

It's a cute idea but I think you should prove you know some stuff about hacking

1. You recommended Cybergate Free, Darkcomet is better
2. You should know there is no such thing as a free FUD crypter, it's either UD/Backdoored
3. Bruteforcing is hardly a viable method these days

IMPERATOR - March 7, 2013, 5:12 am

Hello guys,

I bought nVPN.

I opened port 1604 on the website.
I start up DarkComet.
Servermodule -> expert..
Fill in the IP of my vpn
Fill in port 1604.
I go to socket / net fill in port 1604 (listen)

Then I run the rat in Sandboxie, no new users connected?

What did I do wrong?

Regards,
-12348766754.
