Something about Russian VPS's in, you know, the entire thread...

I'm thinking about getting one so I can set up a 24/7 EnhancedViews watcher, as well as a VPN and TOR exit node. I'm going assume I'm going to be needing more than 512 ram for that since it's going to need a GUI for certain programs to run...

Would love to pay for it with LR, but the \$50 I put in a HYIP seems to be stuck there (figures...) and I may not get that back. Won't kick myself over it if I can't, since I knew full well what I was getting into from the get-go.

VENETX - April 11, 2013, 10:19 am

@Encrypto

yes we do. It's in Russia/ [RU]

@UbZerv

I am assuming you are talking about getting a Windows VPS.

Correct?

Ubersaki - April 11, 2013, 12:22 pm

Is it allowed to host a IRC botnet on the RU servers?

This is by far one of the best VPS providers around so go and order from him its 1 million% legit and the quality is great.

Ulysses S Grant™ - May 28, 2013, 7:19 pm

Hey just wondering the down and upload speed of the smallest windows package you have !

auralnirvana - May 28, 2013, 7:21 pm

Vouch for this love hosting all my stuff on here.

???c? - May 28, 2013, 7:21 pm

Hey Ventro I need a windows vps for RDP . do you have one ?

Location : US

VENETX - June 1, 2013, 7:05 am

@NuclearX

I am very busy right now and won't be available until June 9th and then I'll be available 24/7

@UTRYUDIE™

From speedtest we recorded 70/90

@P4CKET

Thank you for the vouch and comment

@aaurnirvana

Thank you for the vouch brother, I hope you enjoy our service.

@C???????

Yeah I can create you a Windows VPS and location US.

Just submit a ticket or send me a PM and I'll direct you how.

mbro - June 2, 2013, 11:47 am

I cannot connect to my VPS using putty, and can't connect to the IP through a web browser, yet in the Panel it says the server is online.

I messaged you on Skype about this a few days ago and you never replied.

Is anyone else having this problem, or is this just me?

webbie146 - June 2, 2013, 4:06 pm

Like to order the 140,- Dedi but it says it out of stock. Could u check please, thanks!

VENETX - June 3, 2013, 4:29 am

@mbro

Please open a support ticket on your account or PM me here your e-mail address and I'll check the problem for you.

Remember if this is KVM and you install the minimal templates you must install few modules, if this is OpenVZ then I will more than gladly look into this.

@webbie146

PM me and I'll get this sorted out for you.

YOU CAN PAY WITH BTC NOW!!!

Google Bot - June 3, 2013, 4:32 am

Are DoS services allowed? It's not under the not allowed list.

VENETX - June 6, 2013, 6:13 pm

@Google Bot

We do not allow DDoS or DoS from our VPS.

Anyone found doing this will get their vps terminated, ip banned from all of our websites and then black listed (email + ip)

and now it setup instant but i cant connect it says status offline cant connect to vps i already submitted a ticket

VENETX - June 10, 2013, 7:03 pm

@OGMartin

Thank you for the purchase.

I saw a recent purchase of a Windows VPS.

Please allow Windows OS to install as it takes time to install.

OGMartin - June 10, 2013, 7:06 pm

alright i got a ticket answer i thought it was instant setup and your welcome :)

VENETX - June 10, 2013, 7:25 pm

@OGMartin

It is instant activation, but you tried to re-install Windows OS 3 times and has the vps to cause some errors from the log.

We fixed it and now you should be able to VNC over the VPS and finish installing Windows.

VENETX - June 11, 2013, 2:03 pm

@Psilocin

I should really put a tutorial for this.

Get it a lot.

Since this might be the first time you bought a Windows VPS it means you need to finish installing the Windows OS, by setting a admin password and then windows will finish installing.

After that you will need to go into the computer config and enable RDP.

It is set disabled by default on all Windows OS.

*How to connect to windows and finish installing it ;

Log onto panel.vpsdatabase.com:5353

Click your VPS

You will have an option to VNC over it and then a screen will pop up for it.

Wrong, he had a picture of himself being banned from VestroV's service with the words, "Nigg*r Jew"(much like the email). If you think that's fake just get on team viewer and look for yourself.

You can't use inspect element to fake a ban page. You can only modify text. So yes, he was banned. And why are YOU so for the VPS guy? He doxes members and uses bad and inappropriate language but YOUR the one protecting him SO much and implying that the guy who warned the community should close his thread. Charging payments back is fraud. If the person can't deal with some alleged bad language then he's a pussy. He also only threatened to release dox, do you have proof he has actually released them? If so take him to court for breach of privacy.
