[\[NEW\] IP Strayer \[TheFlood\]](#)

The IP Strayer is a new solution for server owners to trace down illegal invaders and get their real IP even if they use a VPN or proxy. IP Strayer works like a FUD silent JDB, but at some points even more advanced method than a JDB. It has got a builder which is a control panel and a developer environment in one. You can create a server file using the smooth and clean GUI which will be automatically (and anonymously!!) uploaded onto our servers without any logs about the user. Then the user will get a link (or optionally a script) that he can install onto his server and which will grab the connected IPs and make advanced logs and analysis about them. When target visits the server IP Strayer server installed, it'll be automatically downloaded onto his computer and will gather all important informations about his network. Then these informations will be directly sent to server builder so He can get complete logs about the IPs even if target used VPN. Thanks to our unique technology, the incoming information will be encrypted and target won't have a chance to decode your server even if he's experienced programmer. After the log has been sent, server file will be automatically removed from target computer so most likely He won't even realise what happened. IP Strayer is a free tool for everybody.

Features: Completely FREE tool

Uncrackable technology

Anonymous technology

Small, Quick and Effective

Smooth, user-friendly GUI

100% White-hat (when somebody connects to a server he accepts the agreement his IP and other informations about his IP can be gathered by server owner)

Coded in Java

Mac OS support

Coming soon: Free beta test for all The Flood members

Screenshots: Coming soon!

Download link: Coming soon!

Virus scan: Coming soon!

Would you like to get this tool even more sooner than others? Join The Flood!

This looks pretty cool! It can gather some nice information to use. Some people may use it for blackhat activity but this would still have a positive effect.

The evil is always in the heart of people, not in the technology. I'm - as a believer - always optimistic about people. We are developing this tool to help server owners and legal investigations, but if people will abuse the technology, we'll find out something to protect the Good and exile the Evil.

With trust,
~ SE?Y

awesome thought i respect it....will b waiting 4 this tool..

regards

poepen112 - March 10, 2013, 7:12 am

This looks nice, im waiting for this too ;)

Investigator' - March 12, 2013, 11:49 am

Thank you for feedbacks! Although, we are developing several other projects, we haven't forgotten about this one.

hydromike - March 12, 2013, 11:51 am

ooo this look good, i cannot wait to test this out

xStrange - March 12, 2013, 12:23 pm

wow it looks great. nice work, can't wait to test this

irishbooger - March 12, 2013, 12:34 pm

Can't wait to test this. Well done. I'm sure it will be very useful.
