Thread: [new rat nova v1](#)

stahack - March 24, 2010, 4:51 am

This is a lite rat with some great basic features. It's compatible with all OS (even 64 bit)...simple easy to use.

Server size is 60k unpacked.

Some but not all features include:

-) Unlimited connects
-) UAC workaround
-) Cryptable server
-) File manager w/upload and download/Run (show process)
-) Screen capture with quality control/ stretch or full screen--save option
-) URL download and run..... w/ broadcast to all if selected
-) Window/Process/Registry and service managers
-) remote shell
-) System and Server information

This is a really good rat for someone just starting out or anyone who wants just whats "needed" and not more.

I have found it to be really stable.

download: http://#.com/files/367544357/NovaLite_final5.rar.html

enjoy ???

Good to know that It's x64 compatible. I've just formatted my test lappy with Windows 7 64 Bit, so I may just give this a crack, just to see what It has to offer.

Much appreciated.
