Thread: [Netgear N900 Gigabit router \[\\$130\]](#)

**Weed.** - March 10, 2013, 5:43 pm

Hey HF,

I have a Netgear N900 Gigabit router I am looking to sell. I bought two, and one of them was more than enough to cover the wireless for my whole house surprisingly. So therefore I have no need for this one, If you are interested PM me. Thanks!

Pictures

Spoiler ([Click to View](#))

Sorry For pictures being so big, don't know why they are.

I'd buy it if it was 802.11 AC, alas, I apologize.

I have to say, I have one of these, and it's been the shittiest experience in the history of all the routers I've owned.

One has had this firmware problem, where the power light just flashes and it doesn't complete a boot.

You have to reflash it, but I just RMA'ed it.

The SECOND one, the wireless signal is all screwed up, sometimes its strong, sometimes is goes weak for some devices...

To top it off, it's all intermittent almost always, programs that need a steady connection will crash.

These are all devices that, on my old network, were FINE.

Never buying NetGear shit again.

The router is rated 4 stars, and yet there's a lot of people reporting issues.

Anyways, when it IS working, and if you can get past their REALLY high failure rates, it is a pretty good router.

Could've easily been interference though, that second time around. Did you factor that?

To author: It is not an AC capable router, just standard. Dual-band and gigabit is very nice indeed, but I need the AC network type. Sorry bud.

Okay Well I'm Sorry I don't Have what you need VZ3R.

And to LoveToHax, I didn't ask you for a personal review of your product. Thanks for trashing my thread bud.

This Is a Great Router, I have had not a single problem from the one I am using currently.

BUMMMPP NEED TO SELL

BUMPPPP THIS THREAD!!!! PLEASE
