Thread: [XSS in SWF UPLOAD: How to use it to upload shell? please help!](#)

wh1t3ang3l - March 10, 2013, 9:43 pm

hello. As this guy wrote in this article

<https://nealpoole.com/blog/2012/05/xss-and-csrf-via-swf-applets-swfupload-plupload/>

is it possible to hack into the wordpress site? I setup a local wordpress installation and I want to start practicing hacking, how can I perform hack?

Some how I managed to create an environment like this demo:

[http://demo.swfupload.org/v220/swfupload/swfupload.swf?movieName=%22\]%29;}catch%28e%29{if%28!self.a%29self.a=!alert%281%29;{//](http://demo.swfupload.org/v220/swfupload/swfupload.swf?movieName=%22]%29;}catch%28e%29{if%28!self.a%29self.a=!alert%281%29;{//)

when clicked on any part of the page, a new popup appears to select the file. I selected the shell.php file but it's not uploading! What's wrong? help me with this, I'm new at hacking and I want to learn more. ?

Anyone? please reply me, this community is great and I want to learn more.
