Thread: [\[Snow Productions\] Snow Booter V1.3 SOURCE | Supports API's | Skype API's \[Free\]](#)

Snow - March 13, 2013, 1:05 am

This is an old project I made in about an hour I am releasing the source due to multiple people asking how to use APIs correctly in a program that isn't web based.

Features:

- Full Visual Basic 2010 SOURCE CODE
- Add your own APIs
- API support
- Skype Resolver (API Support)
- Cloud Flare Resolver
- (Beta Options aren't finished)

Please PM me for the download link.

Here is a little toy I made in about an hour I was bored.
Please note I was very tired and it is late so I am sure there are errors I doubt ill update this because there really isn't a point. I coded it in VB I normally do C#.
?

I would have to say my favorite part about this is the icon. ?

Sorry everyone I have been busy on top of being extremely sick this past weekend. I won't be replying to any PMs unless they are related to my computer science work. I promise everyone that I will reply to your PMs as soon as these last exams/finals are over. Thank you for your patience and interest in my products. I hope everyone can understand that my future has to come first.

LeTirpitz - May 23, 2017, 1:09 am

Hello, I was just poking around and found this. I was wondering if you still supported it and if so as a finished product or as a work in progress still? I'm a skid, and new af to all of this but I'm looking for guidance/advice as to not fall under the "wrong side" of things such as these. Anyways, 25 posts before a pm that's why I'm posting. I wish I had a potato for the end of all this reading.
