Thread: [Chronic Crypter or Razor Crypter](#)

chawk - March 13, 2013, 8:16 pm

Both of these crypters are extremely affordable at the moment. Chronic Crypter is only \$15 for lifetime and Razor Crypter is half off, so its only \$20 for six months.

I am looking for the one that you think will last the longest, and won't be discontinued or outdated due to "personal problems"

Thanks in advance
Chawk

I advise you to use Razor Crypter because many people tell me it is good. I've never used.

You have pro and cons, depends on what you're needs are / what you are after.

Razor is non dependent but it has a huge stub (few hundred kilobytes)

Chronic has a small stub but is net 2.0 dependent.

So choose the one you feel fit for you.

I got both of them, i just use chronic as a backup.

I recommend to go with Razor

I would suggest buying DataProtectector but if you need something more affordable, I would choose Chronic Crypter.

It's owner Bansky is a very dedicated coder.

If you got enough money , go for FileProtector . Those spreading features looks promising + there support is good .

Also heard Razor crypter is backdoored , i dont know if that's true.
