Thread: [200 downloads/10 installs a day - What am I doing wrong?](#)

CatchMelfYouCan - March 17, 2013, 4:16 am

I get 200 to 300 downloads a day, I know this because I uploaded my server to ge.tt which records how many SUCCESSFUL downloads, meaning the file was downloaded and stored on the computer.

My RAT? I use BlackShades 4.8 which only requires .NET Framework 2.0 which is even pre-installed with Windows XP.

Do you have a crypter? Yes... Infinity Crypter, that also uses .NET Framework 2.0 and is ALWAYS Fully Undetectable, on the purchase thread it said it was runtime and scantime FUD.

I did notice that on most of my slaves, they did not have antivirus, and if they did, it was Norton or McAfee.

Help? If someone can help increase the infection rate to at least 200 downloads/50 installs, I will 'partner' our RATs.

P.S. The output server is not 'broken', it works on every machine.

FroFro - March 17, 2013, 4:18 am

Crypters will get detected, then they are updated.

Your crypter was probably detected.

semi_blind - March 17, 2013, 4:19 am

How do you manage to get so many downloads?

CatchMelfYouCan - March 17, 2013, 4:23 am

Your crypter was probably detected.

The crypter was Fully Undetectable, there was a built-in scanner, the stub is also released regularly, it's a very expensive RAT that has membership time ect.

I have an extremely popular video on YouTube that targets web-developers, I also spread VIA Java Drive-Bys, but that's not my mass spreading method, there for more personal attacks.

See proof:

http://www.youtube.com/watch?v=_xKQD0PSi3o

The likes were botted to make it seem more legit.

Broda - March 17, 2013, 4:35 am

You uploaded it to dropbox? I heard they scan the files on virustotal and I think that the owner of infinity crypter doesn't like that.

Dir50 - March 17, 2013, 4:42 am

People are uploading your file on virustotal , simply.
And after they dont want to run it.

CatchMelfYouCan - March 17, 2013, 11:42 am

Damn... What don't you guys understand? It's FULLY UNDETECTABLE! I scan and renew it everyday!

I'm not trying to be rude, but it's very frustrating when people just ignore what I say...

Is it possible that the scanners see it as FUD, but there is no way of telling if it is runtime FUD? I just think if I'm getting 200 downloads a day, and most of the people who connect to me don't have antivirus, there is something going on.

My Dixie Normous - March 17, 2013, 11:45 am

Your virus isn't FUD i just downloaded it and avast stopped the download because it detected it.

CatchMelfYouCan - March 17, 2013, 11:48 am

Avast? ?

I think Avast is the only one that detects it, because on the Infinity Crypter news, it says 'Don't download Avast'.

Thank you for telling me, do you have anymore anti-viruses that could scan it? I know it bypasses Norton and Microsoft, and AVG...

And if anyone would like to partner with me (crypt my file, and I will let you bind your virus)... PM me.
