Legion Cryptography, Encryption and Decryption HelpDesk

Post your question on the thread and J?mes or a Legion member (most probably just J?mes) will get back to you promptly with an answer. All questions posted in this thread will be answered to the best of our abilities.

Dear Sirs.

This thread is the Official Cryptography, Encryption and DecryptionHelpDesk Thread of the group Legion.

Members of the group will do their best to answer any hacking related questions you may and try to assist you towards your goal.

In order for your questions to be answered, simply post them on this thread and a member of the group will post their response to it once they see it; several members can answer the same question, if they feel like something was missing in the first answer, so make sure to check back to the thread for the answer.

Consider subscribing to the thread - button in upper right corner of this post - so you'll get notified when new posts are made.

Before posting a question, please make sure to first search the forums for an answer - a member might already have asked your question in another thread and gotten an answer.

If you can't find the answer around the forum, try searching within this thread for keywords related to your question - use the search form in the lower right of this page to search the thread.

There is only one thing that should not be posted in this thread, and that is crypting requests. This is due to it not really being a question and you personally should be crypting yourselves so that you know what is being crypted. You can post hash cracking and decryption requests here, or just general questions would be great.

Kind regards,
Legion

Vinnie - March 18, 2013, 10:19 pm

James here is one of the best and he and the team will help you out with whatever questions related to Cryptography, Encryption and Decryption.

District - March 18, 2013, 11:23 pm

If I wanted to get a bin for my bot encrypted, which crypter would you suggest and what can I do to prevent my bin from getting corrupted? Also, what settings on the/any crypter should be disabled during the encryption of this bin?

J?mes - March 19, 2013, 12:15 am

Any specific bot or is it a custom one? I would probably recommend something like file protector (supports most common bots) or even a custom made crypter (to ensure FUD for longer). File protector is pretty decent and well known and I doubt your bin would become corrupted while using it. I'm not quite sure what settings would be the best because I don't really have the full picture.

kalandershihabrockner - March 19, 2013, 12:26 am

I had this question about crypters, how does the startup feature in it work?

J?mes - March 19, 2013, 12:48 am

(Mar 19, 2013 12:26 AM)kalandershihabrockner Wrote: [\[CITE\]](#) I had this question about crypters, how does the startup feature in it work?

Depends which Crypter :P? Most crypters have different methods with the startup function due to AVs looking at general methods. Any specific crypter in mind?

no no...not like that. how does it implement the startup on the virus? the stub of the crypter will have startup?

HackRain - March 19, 2013, 1:31 am

Do you know of any completely c dependent crypters?

Im looking to see the plausibility of running a RAT and crypter on a linux distro.

Technically, yes. Make sure though if the file you're crypting also has a on startup mechanism that you disable it (e.g. blackshades). So enable the startup function on the crypter, but not the file you're crypting.

I'm pretty sure that Fileprotector / Element Protector have no dependencies (doesn't require .net).

Shiiift - March 19, 2013, 4:46 am

Why doesn't my binded server pop up in DCRat after running it in sandbox?

The unbound server does pop up as a new slave, binded one doesnt.

I bind it with real setup programs trough Iexplore.

there must be some problem with the binder..tyna's crypter's binder sucks.

Regulus - March 19, 2013, 5:59 am

Can anyone here give me some tips on some free crypters? (I'm only using my RAT for fun so i don't need a extremely secure crypter atm)

And, could someone maybe help me to setup the crypter for me? (I'm new at this, and could need some help)

I have: Teamviewer & Skype (But unfortunately no mic)

Thanks in advance (:

There are plenty of free crypters around but they are not FUD. Take a look at

<https://hackforums.net/showthread.php?tid=3272866>

<https://hackforums.net/showthread.php?tid=3342919>

<https://hackforums.net/showthread.php?tid=2723888>

<https://hackforums.net/showthread.php?tid=3212623>

Also, there are plenty of tutorials on how to crypt your files in the RAT section :).

lowkasen - March 22, 2013, 1:27 am

i want to know which crypter FUD of course i should buy for

1. cheap
2. updates FUD long time

If you're looking for cheap and FUD for a longish, give [Debug Crypter](#) a go ;).

DeathbyProxy - March 24, 2013, 2:47 pm

Could anyone please help with this?

fd0057ef2fddb7618e3ab11412bfcc6d

Got the above from an SQL Injection I was doing on a site. It is the password, but I cant for the life of me find out which type it is to decrypt it.

Thanks
Dbprx

Tijanihassan128 - April 23, 2017, 5:07 am

please i need help on how to get a good crypter
