Thread: [Increasing Character Limit In Signature When Tags are used OR Not Including Tags](#)

Maple ?? - March 19, 2013, 6:38 pm

What my suggestion is that the character limit in signatures is increased when tags are being used, or not even count them. The reason is let's say I want to make a sig use hyperlinks I can't because they tags including the link take up too many characters.

Do you agree or do you not?

It's very possible to abuse and spam if this was added.

Not going into detail on how but I think you can guess.

Maple ?? - March 19, 2013, 6:45 pm

Well maybe increase it when tags are used or count [b] [/b] as 3 or 4 characters not 7.

Ghost? - March 19, 2013, 6:56 pm

I just use link shorteners whenever I have a link, and it always fits fine.

I see no need for this.

Suggested and denied. Omniscient will not increase the limit nor exclude myCode.

Omniscient - March 20, 2013, 2:16 am

Yeah I'm definitely not going to do this. You could potentially spam your signature with near limitless mycode characters.
