Thread: [Monster Worm 2.0 / 3.0 / 4.0: fake worm](#)

PedroDJ - March 20, 2013, 4:57 am

Hi HF,

be carefull making deal with

?VoltioS: <https://hackforums.net/member.php?action=profile&uid=1541050>

CyberPimp™: <https://hackforums.net/member.php?action=profile&uid=363058>

regarding Monster Worm: it's a fake, seller [CyberPimp™] ignore post in thread and ?VoltioS troll users regarding support.

Selling thread: <https://hackforums.net/showthread.php?tid=3250414>

Yesterday was opened a new thread on Monster Worm 4.0 but was deleted today: another strange thing on MW.

Me and other users opened SCAM REPORT for MW.

CnayR - March 20, 2013, 5:17 am

Why would anyone buy a "worm" based on mostly social engineering attacks? Especially since Conficker already proved how ineffective such attacks are in 2008. Hell, you'd probably get more installs using Confickers methods now than you get with this bullshit.

PedroDJ - March 20, 2013, 5:19 am

(Mar 20, 2013 05:17 AM)CnayR Wrote: [\[CITE\]](#) Why would anyone buy a worm based on mostly social engineering attacks? Especially since StormWorm already proved how ineffective such attacks are in 2007.

We can discuss on why i have bought MW without waiting for REAL vouches, but the point of this thread is to alert HF regarding this tool :)

American Apathy - March 20, 2013, 5:26 am

Obviously it's fake, anything claiming to be a functioning worm is fake. The people here are simply not smart enough to find valuable exploits and keep ahead of antivirus software and security updates at the same time.

Lets have a look..

P2P Spread - Aha okay, same P2P spread that has been around for years and probably infects 1 out of every 2500 users?

USB Spread - Again, useless.

LAN Spread - This is one is just gold! Like seriously how many people still use like Windows 95?

Doc Spread- Useless

.EXE Spread - Completely useless

All the other file spreaders - Completely useless

IRC Spread - LAWL

MSN Spread - ROFLCOPTER You can't even get a download for MSN Messenger from Microsoft

anymore.

ZIP Spread - Just no.

RAR Spread - Again, just no.

Everything else - Just no.

Every single thing they offer is some outdated C+P'd bullshit.

Totally agree with you: but CyberPimp is free to open MW 4.0 thread and trying to selling it.... it's not good, staff should be ban both.

redpois0n - March 20, 2013, 7:22 am

When they cant spell dependencies correct (unsure if even I did) then you can clearly see they are F-U-C-K-T-A-R-D-S

So it is completely fake?

PedroDJ - March 23, 2013, 4:02 am

So it is completely fake?Yes, completely fake and CyberPimps and Voltios like to troll customers on sales thread [CyberPimp ignore every post in thread, and him is the seller].

Do not deal with those users :)

PedroDJ - March 25, 2013, 4:46 am

Another Community Alert on Voltios

<https://hackforums.net/showthread.php?tid=3353876>

Another evidence on how ?VoltioS takes him customers seriously!

<https://hackforums.net/showthread.php?tid=3354555>

Thank you all: the scammer was banned :)

PedroDJ - March 26, 2013, 10:30 am

New sales thread opened

<https://hackforums.net/showthread.php?tid=3356702>

be carefull, new scam on the way.

I have bought it before any scam report, and never worked: do you wanna the useless builder ? :)

xor - March 26, 2013, 10:35 am

your dear friend voltios has been permanently banend , lulz

PedroDJ - March 26, 2013, 10:36 am

Yes bro, the lamer was banned and sales thread was deleted but, now, there's a new seller on the same FAKE TOOLS, and more users will be scammed.

It doesn't work: cool gui but fake, spreading system doesn't work and I have bought a worm for spreading.

Same problem for ALL MW3 customers: and now the new seller is PMing me asking to remove my comment on sales thread.... and keep on scamming!

What did you expect bro? Worm will work only if there are some 0day or at least WORKING vulnerabilities it can spread through, and this won't be sold for 20\$ on HackForums. Monster Worm is just a piece of shit with public spreading methods, and they won't work in most cases.

There are not many worms outside HackForums too, their Era seems to be dead for now.

I remember back in old days, when WORM was actually a good way to spread.

PedroDJ - March 27, 2013, 2:21 am

The problem wasn't the spreader or worm functions, the problem is that some users scam, scam and scam again HF users, and keep on scamming and stole money here without any problem!

PedroDJ - April 16, 2013, 8:50 am

The SCAM it's going on.
