Thanks for sharing that. I am sure a lot people will learn from the source code and benefit from it.

ident - March 21, 2013, 3:02 pm

Thanks for Sharing what? Another taken poorly already released crypter, change a few things and releases.

No sub or function knowledge, No understanding of the Not keyword when using an If statement. Uses a hidden webbrowser instead of the httpwebrequest class yet can write a crypter? Changes from try statements to On Error Resume Next. Switches from msgbox to MessageBox.show. The classes are named not the forms. These are all major evidence you have just googled and pasted different code from around the internet.

IconChanger class <http://www.sqebd.com/vb/t925.html#.UUuCcEqH-So>

iCompiler class

<http://social.msdn.microsoft.com/Forums/en-US/vbgeneral/thread/652e8618-61de-4e1e-a41a-8e04b585f0e1/>

28 warnings. 22 errors. All implicit conversions.

This is where i stopped

No clue the difference between a string an an integer.

You have no idea what you are doing do you? Stop copying and pasting. Learn to code. It takes time.

I believe ident has said everything I was about to say. This whole Crypter is leaked anyway lol. It's public already. Stop posting it back here.

Hyptonix - March 22, 2013, 12:47 am

Well he has 9 posts and neg rep... so I already suspected it.. :T
