Thread: [Free & Private - Rat/Crypter/Logger/Jdb/Binder - LIST](#)

Predator Crack - March 21, 2013, 9:35 pm

Here is a list of the most used available (free) Rats/Crypters/Loggers/JDB/Binders along with private solutions that you can find in HF and you can choose from. Keep in mind that this is not a sale/discussion thread, so avoid asking about what to choose compared to others or asking to buy here !!! Go to marketplace please. That thread acts like shortcut to tools and nothing else.

∴ Coders/owners of the tools, can simply send me a PM in order to update/remove anything regarding their tools ∴

Prices Layout

Quote:1 = 1-2 Month License
2 = 3 Months License
3 = 6 Months or Lifetime License

1 / 2 / 3 (x = Not available price)
Only 3 -> Product offers only 6 month or lifetime license.
Only paypal prices are mentioned here.

FREE RATS

Cybergate [Tutorial 1.07.5](#)
Darkcomet [Tutorial 4.2-5.3](#)
[jRAT 3.2.3.5 ~ Multiplatform|Java](#)
[Spynet 2.7](#)
Xtreme RAT [Tutorial 3.1](#)

~ I recommend DarkComet 5.3.1 version as its the one that works properly with any crypter and any system and is very stable. A second solution can be jRat as it's rare to see these days multiplatform and stable rat.

BINDERS

Binders are used to bind (connect/join) a file to another. Here are used to bind a malware executable to a legit application or any file like an mp3 or a picture.

Here are some binders to use and of course you can choose the RAT binder also:

Celesty Binder (by DarkCoderSc ~ Darkcomet's Rat Coder) - Included in Darkcomet v.5+

[Easy Binder 2.0](#)
[iExpress Microsoft Windows Intergrated Binder](#)
[\[M\] Ultimate File Binder](#)

Notes ([Click to View](#))

~ Free binders are usually detected these days and that is the reason, people tend to buy crypters with inbuilt binder. Only iexpress will not affect your file's FUDness and if you choose it make sure you have already made your server FUD and then BIND with that.

One-time execution Problem

If you have enabled startup for your rat, anything you bind will appear on startup with any other free binder except the iExpress. That is the reason, we usually bind after crypting unless if we have a fud binder (private crypters).

The bad with iexpress solution is that supports only (.exe) files and the binding can be detected via any winzip type software. In the end i would choose either Celesty for a free random binder or iexpress for the one time execution advantage and of course that is intergrated to our PC and there is no need to download anything.

~ Celesty is a very good and well known solution. iExpress is mainly used for executables and it doesn't affect detections if used properly. (fud file is required)

Hello guys. I would like to let you know that almost 2 weeks now, i was not being able to be active in HF at all due to connection problems and full time working on the pc tech store. I managed to update the thread today. I removed some and added some solutions. Please send PM for anything that i need to change.

@nosferatus DONE

@~Cozza Sorry but i am not going to give any link. The reason is simple. Even if i am legit member (people know me of RT crew and the fact that i never tried to do anything) i don't want get accused for something. So please use the HF search function or use google to discover the new official link that exists somewhere. (another site). In the end my advice always will be to use Virtual machines for these type of tools.

@all I am going to update the thread 1-2 times a week.

Thread Updated (19/4/13)

- All prices checked again.
- Links for Blackshades products with foxxy and xprotect came back.
- Removed 2-3 products that are off at least for now. Shame that some users infect others here and get money. Too bad to see that.
- Finally, i would like to hear for recommendations regarding Free Crypters.

~ Have a nice day.

Really nice post!

I was searching for a binder... i downloaded Darkcomet here this week from a post in HF, but the celesty.exe was not included in the darkcomet package. There was a "celesty" map with the different languages, but no celesty.exe in the 5.3 version i downloaded. Was it removed from the package? is the celesty binder may be included in older versions too?

Edit : i downloaded again Darkcomet 5.3.1 from another post, and celesty.exe is included there! gonna try this out.

Have a nice day!
