Thread: [Official booter power review! ~ Check this before you purchase a booter here!](#)

Clubs - March 22, 2013, 1:24 am

Hello guys, this thread was made in order to get the booter market cleaned from false advertising booters.

In this thread I am going to post a valid, updated graph dstat of all booters here in HF.

The reason I do that is because over the time I've noticed alot of booters that post an invalid dstat of their booter. What invalid means?

- *An old dstat (more than 1 month old).
- *A copied dstat from an old booter thread.
- *No dstat at all
- *Advertising as hitting at XGbps while the dstat shows YGbps.
- *And so on...

So as for today, I'm starting to make dstats (which will be made by me with my ~20Gbps server). I will either contact YOU (the booter owners) or if I haven't contacted you and you want to get into the "White list" then you should contact ME.

Thanks for everyone who will cooperate.

Rules:

- *If you refuse to make a dstat, I'll mention it. You probably have something to hide, don't you?
- *You'll have to share your screen while attacking, to make sure you attack from your booter and not anything else (such as botnet, other booters etc).
- *I will post your best dstat result, if you think that it's not fair then you're always welcome to make a new one.

These dstats are showing the total network of the booter, not an average attack power.

--

.Infinity - March 22, 2013, 1:40 am

1. Where did you get a server that can measure 20Gbps? I highly doubt you have such a thing.
2. Why are you concentrating on the dstat as if that matters?
3. You're advertising another stresser in your signature, people are just going to say you're biased.
4. You aren't exactly a well known member in the stresser scene, who are you to make judgment calls?
5. This has been tried before, didn't work well.

Clubs - March 22, 2013, 1:45 am

- (Mar 22, 2013 01:40 AM).Infinity. Wrote: [\[CITE\]](#)
1. Where did you get a server that can measure 20Gbps? I highly doubt you have such a thing.
 2. Why are you concentrating on the dstat as if that matters?
 3. You're advertising another stresser in your signature, people are just going to say you're biased.
 4. You aren't exactly a well known member in the stresser scene, who are you to make judgment calls?
 5. This has been tried before, didn't work well.
 1. Not sure I owe you that information, what difference does it make? Come over skype and I'll show you.
 2. Because dstat is the easiest way to measure power. It isn't a whole booter review
 3. I'm presenting facts, I do not judge.
 4. As for #3, I'm presenting facts, I do not judge nor tell you what to purchase. If your booter hits exactly as you advertise, then you have nothing to fear of.
 5. By whom? As far as I know, there's no reason for it not to work.

I have no favourites. I have no enemies. I'm here to give the consumer information which by that he should decide.

Codevade - March 22, 2013, 1:51 am

1. Anytime you post in Marketplace Discussions and refuse to provide details people doubt you.
2. No it is not. dstat is a shitty HF Kid tool used for measure VM's because they have no Eth0 adapter.
3. Presenting facts and not answering questions about the facts you presented makes no sense.
4. I have no issue with that, but dropping a 20gbit line is not that hard :).
5. There are always reasons why it may not work.
6. Your closing statement tells me you're not biased towards one or another, hopefully that will prove true.
7. I suggest installing Zabbix or hooking your server into an installation via SNMP.

I honestly do not believe a thing you've said so far, you say you have access to 2x10g but you do not state where or how you have this or if they are even dedicated and unshared lines etc.

You used the word "dstat" like that is something you can give to someone else or create.

Dstat is a versatile replacement for vmstat, iostat, netstat and ifstat. Dstat overcomes some of their limitations and adds some extra features, more counters and flexibility. Dstat is handy for monitoring systems during performance tuning tests, benchmarks or troubleshooting.

Dstat allows you to view all of your system resources in real-time, you can eg. compare disk utilization in combination with interrupts from your IDE controller, or compare the network bandwidth

numbers directly with the disk throughput (in the same interval).

Darkwin - March 22, 2013, 1:55 am

Sounds like an good job you're doing Stan', Seems like alot of booters nowadays are lying about there power in order to make sales.

Would be nice to see some of your reviews, Best of luck!

Also its funny that the only people whom usually have any problems with this are booter owners themselves. Lulz!

Osuka - March 22, 2013, 1:57 am

hmm can't wait to see what people gotta say.

[img]http://25.media.tumblr.com/tumblr_lqpuxdZN421r0ojhto1_250.gif[/img]

Clubs - March 22, 2013, 1:58 am

By graph dstat I actually meant zabbix. Most people don't know what that means.

I don't see what is so upsetting with what I do?

What details did I refuse to give? Where is my server from? It isn't relevant.

If a booter will drop more than 20Gbps I'll mention it in the thread.

Edit: Thanks for the ones who realize the benefits of this.

Codevade - March 22, 2013, 2:03 am

Edit: Thanks for the ones who realize the benefits of this.Okay, I didn't understand why you mentioned a command line tool instead of Zabbix.

Neither do I, I actually find it to be the opposite of upsetting.

No, just when Infinity asked you basic and simple questions you refused to answer them. Doesn't bother me but I was curious.

Please don't use the word "booter" we are not in 2011 anymore.

If I drop you 20gbit line can I be on the top of your thread? I would like a nice Xposure Network Tool dark, sleek, logo up there. We get a lot of positive publicity but a little more could never hurt.

lol there are alot of comments while I'm not here.

1. Dejaboot killed the 20Gbps server, you can see at the bottom the blank spot means it crashed, when it was back up the attack was weaker (only 8Gbps) and that's why it showed 8Gbps instead of 20Gbps or anything else.

2. I don't advertise my booter there because people will think it is not fair or something like that, if it's important for you then okay and I'll do it.

3. It's true that I can't know that, and that's why from now on I'll ask for a screenshare while they attack the server.

Yeah, and I can send 35gbps, really doesn't mean anything as far as which "booter" or "stresser" is better than another.

Is 35Gbps your max or on a normal day?

I've never said Dejaboot is better than any other booter.

AlterBlitz - March 23, 2013, 8:50 am

DejaBoot is very costly compared to Xposure NT. When you buy a stresser, you look at all factors.

Codevade - March 23, 2013, 8:50 am

I've never said Dejaboot is better than any other booter.30gbps is my wakeup attack. I push 60gbps and saturate most of Cloudflare on a normal day.

I never said you said it was. I was referring to the logic behind OP's post.

<http://prntscr.com/xhn4s>

<http://prntscr.com/xhn7v>

Deja's 10 minute package is \$25 cheaper than Xposure

Codevade wants you to

Well you better change it on your site then, shouldn't you?

SkidAttack. - March 23, 2013, 10:08 am

Just bought xPozure NT , waiting for my license.

I will write feedback there :D

Codevade - March 23, 2013, 10:08 am

(Mar 23, 2013 09:46 AM)Leg?nd Wrote: [\[CITE\]](#) Well you better change it on your site then, shouldn't you?Implying I do low-level grunt work like web design.

Prices are clearly outlined on our thread.

I would advise you to stop using Awknet as well. They don't like people who facilitate illegal network attacks.

SkidAttack. - March 24, 2013, 12:53 am

Well...i tried xPozure NT , and don't see anything really powerful yet.

Not trying to sale trash or something, i paid money.

Can not take down basic sites for some reason (DRDos,SUDP) .

May be it's some Error (I heard xPozure hits hard, seen videos)

I don't know.

+ I live in different timezone than most americans do, when i use xPozure most users are sleeping.
Can not say servers are overused.

When SUDP fails you on a site, try SSYN, wait a half of a second, done.

AlterBlitz - March 24, 2013, 2:58 am

Codevade, i am soon buying your stresser. Clarify the prices please. Is it the one's stated in the thread or your website?

(Mar 24, 2013 01:23 AM)Codevade Wrote: [\[CITE\]](#) Yeah, sometimes 35 gbps has a hard time taking down home connections.

And you'd be surprised. The majority of our clients are foreign or overseas. American kids like web based programs like Asylum that use the same API between 2 websites and host them on the same server.

max i ever got was 450Mbps~... ive also tested it multiple times never seen it over 1gbps

Getting like 200Mbps now..

Apple J4ck. - March 26, 2013, 8:47 am

I've made a graph using this server and as far as I can see it can take more than 25Gbps...
proof :

if there's anyone who can top that please PM me, just wondering how much this server can take.

Tibit - March 26, 2013, 9:39 am

Maxed out their first graph at 4MPPS with [Empire Stresser](#)'s Array:

He then sent me to another server to hit, it maxed it out at 7.89MPPS:

Once we finish adding all the servers and updating the DNS lists we will do some UDP graphs.

Apple J4ck. - March 26, 2013, 10:04 am

Once we finish adding all the servers and updating the DNS lists we will do some UDP graphs. I vouch for that, just made that graph, Tibit is completely legit.?

Leg?nd - *March 26, 2013, 10:07 am*

We have to use our total network? :O
PM me

My account got Hacked - *March 30, 2013, 7:08 pm*

this is a great service you are offering

kyledag500 - *April 5, 2013, 1:45 pm*

Definitely helpful. Might try one of these
