Thread: [\[TUT\] Snow Animation Tutorial](#)

Mr.Xchange - November 3, 2008, 11:17 am

Im going to show you a technique I learned in making a signature with snowing effects.. although the snow effect in this tutorial is still not perfect. In the end of the tutorial I will just let you adjust the frames of the animation to achieve a better result.

Programs needed:

Adobe ImageReady

Adobe Photoshop (I'll be using Photoshop CS2)

Note: You need to have basic knowledge of Adobe Photoshop and ImageReady.

STEP 1:

First create a signature or just open an existing signature you made.. it's your choice.

I'm going to use this one:

[img]http://i36.photobucket.com/albums/e4/mika_cs/whitexmas.jpg[/img]

STEP 2:

Create a new layer and fill it with black.

STEP 3:

Create another layer. Now use soft round brushes and start brushing on the layer youâ€™ve created (Make the size vary from 5-16 depends on the size of your sig.)

My result:

[img]http://i36.photobucket.com/albums/e4/mika_cs/presnow.jpg[/img]

STEP 4:

Duplicate it at least 3-4 times and rename it so â€™Snow 1-5â€™ or something like that so you can keep track of it easier

[img]http://i36.photobucket.com/albums/e4/mika_cs/layerpanel1.gif[/img]

STEP 5:

Arrange all of the 'Snow Layers' to move down right or left like this.

[img]http://i36.photobucket.com/albums/e4/mika_cs/linedsnow.jpg[/img]

STEP 6:

When you are done press Shift + Ctrl + M to access ImageReady or Click the image ready icon that looks like this --> [img]http://i36.photobucket.com/albums/e4/mika_cs/imgredyicon.gif[/img]

STEP 7:

Now in Image Ready.. If you donâ€™t have the animation bar visisble like below then go to Window > Animation.

[img]http://i36.photobucket.com/albums/e4/mika_cs/animatnbar.jpg[/img]

STEP 8:

If you have all your snow layers visible then turn them all off by clicking the eye. Only leave *~snow1~* on.

[img]http://i36.photobucket.com/albums/e4/mika_cs/eye.gif[/img]

STEP 9:

Turn the frame time to 0.1 seconds

STEP 10:

Create a new frame by clicking on the paper-like icon.

(Posted Image)

STEP 11:

Now go to the Layer tablet and hide *~snow1~* and turn on *~snow2~*

STEP 12:

Click the Tween icon.

[img]http://i36.photobucket.com/albums/e4/mika_cs/tweenicon.gif[/img]

And use these settings:

[img]http://i36.photobucket.com/albums/e4/mika_cs/tweenoption.gif[/img]

then click OK

STEP 13:

Click on the last frame and duplicate another frame.

STEP 14:

Repeat Steps 11-12 (uncheck *~snow2~* and turn on *~snow3~* instead of 1 & 2) Do this for every Snow Layer, for me the last Snow Layer is the *~snow4~*

STEP 15:

Now go back to the last 3 frames and turn on *~snow1~* on all of them, after that turn the opacity down to 15%

STEP 16:

Duplicate 2 more frames and turn off all the *~snow Layers~* except *~snow1~* on both frames

STEP 17:

Turn the opacity on the 2nd to last to 65% and the last frame to 75%.

STEP 18:

Go back to the 1st frame and uncheck the black filled layer and viola!

STEP 19:

Save your work and you're done!

If you follow the tutorial correctly then this will be the result:

[img]http://i36.photobucket.com/albums/e4/mika_cs/whitexmasfinish.gif[/img]

Now if you're not satisfied with the animation it's upto you if you want to adjust the settings of the animation or maybe add more layers to achieve a more realistic or a better snow effect.

Sir Neko - November 4, 2008, 7:42 am

When its written by you then: Verry Good Job.

The Jokerâ„¢ - November 4, 2008, 10:49 am

Thats pretty aswsome and pretty easy to follow, Im going to try that but with maybe drips of blood,Awsomez?

Stenography - May 6, 2011, 2:53 pm

thank you dude !

Made my first animated signature ;)

Made my first animated signature ;)

Would you stop gravedigging? >_>

DeMeR - July 27, 2011, 10:24 pm

nice tut, i might use it next time i make a tag o.0

Now if you're not satisfied with the animation it's upto you if you want to adjust the settings of the animation or maybe add more layers to achieve a more realistic or a better snow effect.

I don't like how it falls for a second, and then just resets, but if it fell continuously, it would look amazing! It actually turned out a lot better than I thought it would. Good job man.

DGisRIPPIN - *September 22, 2011, 6:07 pm*

^What he said, but it still is freaking awesome.
thanks

Harishwar - *September 22, 2011, 9:36 pm*

Thank You ... Nice Tutorial !!

:) :) :)

Barbarroja - *September 23, 2011, 1:34 am*

Good tutorial, well, "winter is coming" hehe

John™ - *September 23, 2011, 4:16 am*

Thanks man, Very nice tut, Keep them coming.

jessyray - *October 8, 2011, 4:08 pm*

Nice tutorial, already knew how to do this but helpful :D
