Thread: [Python Get HTTP/HTTPS Working Proxys easy](#)

jeetjain2345 - March 23, 2013, 11:56 am

Go to <http://www.hidemiyass.com/proxy-list/search-273129/2>

select option

Proxy country =all country Port(s)=all ports Protocol=HTTPS Anonymity level=High and High +KA

PlanetLab= Include Speed=Fast Connection time=Fast

Sort by Date Tested DESC per page 100(as u need)

finally click on Update Results and copy all txt like this

"13 hours and 22 minutes 125.39.66.147 80 China

HTTP Low

13 hours and 39 minutes 223.4.179.152 3128 China

HTTP Low"

copy all and go to <http://www.aliveproxy.com/proxy-list-filter/default.aspx>

paste all code in source and click on convert it will give u list like this

"125.39.66.147:80

223.4.179.152:3128"

Now u have a list open notepad and save as proxy.txt

Python will check which proxy is working 100% for that code is below

copy code and save whatever.py in same folder where proxy.txt

PHP Code

<?php

import socks

import socket

import socks

import time

from threading import Thread

import urllib

ips=[]

f=open("proxy.txt",'r').readlines()

ip=open("ip.txt","w")

def pop(i):

 proxy,port=f[i].split(":")

 print f[i]

 print "[+]Checking proxy no %d " % i ,f[i]

 s = socks.socksocket()

 s.setproxy(socks.PROXY_TYPE_HTTP,proxy,int(port))

 try:

 s.connect(("pop.gmail.com",995))

 print "[+]Alive %d " %i, f[i]

 ip.write(f[i])

 except:

 print "[+]Dead %d " % i,f[i]

for i in range(len(f)-1):

 t = Thread(target=pop, args=(i,))

 t.start()

now run whatever.py and wait for few minute upto 100 proxy will be checked in few minute

Now you can use these http/https proxys if this helps and liked will post how to get socks4/5

working proxy
proxy always helpfull for hacker,cracker and spammer
?
