Thread: [The request was aborted: The connection was closed unexpectedly. HTTPWEBREQUEST](#)

Justice™ - March 24, 2013, 1:42 am

I get this error when I try to send POST Data and log my self in a website. Any ideas?

The request was aborted: The connection was closed unexpectedly.

This is my code

```
Code Imports System.Net
Imports System.Text
Imports System.IO
```

```
Public Class Form1
```

```
    Dim logincookie As CookieContainer
```

```
    Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)
Handles Button1.Click
```

```
        Dim postData As String = "username=" & Username.Text & "&password=" & Password.Text &
"&LoginBTN="
```

```
        Dim tempCookies As New CookieContainer
```

```
        Dim encoding As New UTF8Encoding
```

```
        Dim byteData As Byte() = encoding.GetBytes(postData)
```

```
        Dim postReq As HttpWebRequest =
```

```
DirectCast(WebRequest.Create("http://respawn.ca/login.php"), HttpWebRequest)
```

```
        postReq.Method = "POST"
```

```
        postReq.KeepAlive = True
```

```
        postReq.CookieContainer = tempCookies
```

```
        postReq.ContentType = "application/x-www-form-urlencoded"
```

```
        postReq.Referer = "http://respawn.ca/login.php"
```

```
        postReq.UserAgent = "Mozilla/5.0 (Windows; U; Windows NT 6.1; ru; rv:1.9.2.3) Gecko/20100401
Firefox/4.0 (.NET CLR 3.5.30729)"
```

```
        postReq.ContentLength = byteData.Length
```

```
        Dim postreqstream As Stream = postReq.GetRequestStream()
```

```
        postreqstream.Write(byteData, 0, byteData.Length)
```

```
        postreqstream.Close()
```

```
        Dim postresponse As HttpWebResponse
```

```
        postresponse = DirectCast(postReq.GetResponse(), HttpWebResponse)
```

```
        tempCookies.Add(postresponse.Cookies)
```

```
        logincookie = tempCookies
```

```
        Dim postreqreader As New StreamReader(postresponse.GetResponseStream())
```

```
        Dim thepage As String = postreqreader.ReadToEnd
```

```
RichTextBox1.Text = thepage
```

```
End Sub
```

```
End Class
```

As you can see from the code, I'm trying to make myself a portable version of Respawn Stresser for myself. I'm quite new to httpwebrequest, so any help is appreciated.

EDIT: Just realized that I sounded like I didn't know what the error meant. I am wondering how I can fix that.

I think the http headers may be wrong, but I am not sure.

Helius - *March 25, 2013, 9:01 pm*

use your favorite browser to login and use fiddler to check the headers ...
