Introducing Fiverr Clone Script

Fiverr Clone Script is our latest PHP application that allows you to setup a marketplace just like Fiverr.com. An interesting trend has emerged: microwork outsourcing. The business concept is simple YET profitable.

With Fiver script, you can setup a site where your users can hire people to do micro-jobs (small task) for a fee of only \$5. Jobs can be in a form of design work, video recording, advertising or any quick task.

Why the Fiverr model works and how can it be profitable to you?

Just think of it this way, there are many problems users will face and many of these can easily be solved by other users who are willing to do it for a small fee. Take for example, Fred wants to convert a word doc to PDF format and he didn't know to do this. Hiring someone to do it will simple cost too much for such a task.

Now you must be asking what's the big deal about running a Fiverr site and how can you as a business owner make money of out the Fiverr model?

Running a Fiverr site is virtually automated as the system is built to run by itself. This brings you a hassle-free yet another money making machine that can potentially generate thousands of dollars per month.

Revenues for Fiver clone site owner

Fiverr makes money by charging \$1 (your revenue) for each job sold on the site, paid by the seller. Therefore the buyer pays \$5 and the seller earn \$4 and receives the funds via Paypal. With Fiverr script, the site owner can determine how much each job can cost, it can be even \$10 or you can even set is as user defined cost per job.

Let's set a realistic target of \$3000 per month revenue:

- #1: Each job cost \$5 and your revenue is \$1 per job
- #2: Daily revenue will be \$100 to attain a \$3k income
- #3: Jobs per day will be 100 (\$100/1)

With an average jobs of 100 per day, you can easily earn \$3000 per month, double the jobs and your potential revenue can hit in excess of \$6000 and the best of all, running this business requires you less than 30mins per day to operate.

The potential is virtually limitless. The Fiver Clone Script can also be setup on niche industry or your existing websites such as advertising or IT, where users can offer specialized jobs for a fee.

To get it leave a reply here and I will send you a pm with it
