Thread: [Simple PING Function](#)

midazwhale - March 28, 2013, 5:38 pm

I know that there are some different ways to ping a server using c++, but I really like to use Dev-C++ and I would very much like to use a ping function using this IDE. Every one that I've tried using has been for Borland or Microsoft Visual, and while I have MS Visual-C++, I really want to use Dev-C++, how would I do this?

Thanks HF.

Healthy advice that I want to give you IS; use [Code::Blocks](#) OR Visual Studio Express 2012. These two are FAR more efficient than ANY IDE (in my opinion). I use BOTH. While Code::Blocks is my first preference but Visual Studio is sexy. ?

As far as your issue is concerned, [Lemme Google that for ya!](#) ?

Maybe this can be of assistance. Even if not, it still might be fun to look at the source of the original program...
