As a general rule of thumb, never use the rating system as a basis for buying something in the marketplace. It's almost always just sellers biting each other.

It's all up again.

For those who still can't open it, it might be that your PC is still using the old DNS settings. Since I changed hosts, you will need to delete your cache or flush your DNS.

How long does this FUD ? Any ETA ? Brought it yesterday and waiting for update.

kalandershihabrock - May 17, 2013, 11:29 pm

stub coded at c++ and what is the builder coded at?

ezeeprofit - May 18, 2013, 1:35 am

whats the stub size currently ???

cheers Ezee

just paid for a renewal last night and sent you a pm.. can't wait to get this back!!

Ledabsolute - May 18, 2013, 5:12 am

I do not like to say too much.

But this Crypter is not absolutely FUD.

It's since 13 of this month was not updated , has been updated only a few hour ago and despite all the Crypter it's not FUD :

I have tried 3 different settings :

Normal Settings + Generate random info = Detections : 6

Alternative Settings + Icon + Generate random info = Detections : 3

Alternative Settings (just that) = Detections : 2

[Remember also that the stub size with alternative settings it's like 700-800 KB]

I have paid and so I will not be teased.

So if this is a professional service , i want explanations.

I'm not a user too picky, but, however, if I buy a crypter it is because at least FUD after the "updates" should be, otherwise it makes no sense ..

I hope you can understand.

Have a nice day.

Regards

Ledabsolute

Replied to your PM, activated license.

(May 17, 2013 11:29 PM)kalandershihabrocker Wrote: [\[CITE\]](#) stub coded at c++ and what is the builder coded at?

The builder/GUI is in C#, so you need dependencies for the builder only.

??Sheepii - May 20, 2013, 4:06 am

Your TOS says that you can't make a complaint here on the thread. Does that mean that, if you don't like the product, or find it unreliable, that you're not free to express your opinion because if you do you'll drop their license? If so, that's kinda screwed up.

I feel everyone should know the full capabilities of your product, any margin of errors within it, and be able to publicly assess the situation. Not just within the confines of private messaging. That way everyone can not only know how efficient your service is, but also, the efficiency of the product you're selling.

Don't take it personally, I just don't particularly agree with your current TOS.

Why do you feel it's a more effective system?

I've never used any of your products nor have I ever done any transactions with you.

rekless - June 19, 2013, 10:42 am

Hey I was interested in buying this, but had a few questions.

When you post your scans on this thread to prove it is FUD, what do you crypt. Blackshades? Because I know a lot of crypters are good with some rats but with others they don't have the same fudness.

Also, do you know what settings with cybergate this would work best with? Is the rat's startup or cybergate's startup better.

It's just I've gone through 4-5 crypters in the last year and none of them were just simply you make a file and crypt it. There's always some problem of compatibility or settings.

LMFAO - June 19, 2013, 11:59 am

I most of the times crypt Blackshades .. Sometimes other files.

On Cybergate I am not sure, depends on your version. On Blackshades I toggle install/startup and on xProtect none of that. Best settings.

By "Other files" what do you mean. Because before buying I want to know if it can be crypted on anything free that I use. And by crypted, I mean as in a fully fud crypt tested and seen by the owner himself, hence why I'm asking on what you've tested it ?

can this crypt adamax if so then am in

SIM-1809171 - July 20, 2013, 2:56 am

Assuming this also has Persistence & Startup, Right?

If so, Will probably be purchasing tomorrow. Looks really nice!

Also, Do you offer a one month license?

Replicator - July 20, 2013, 4:43 am

Can someone tell me what the detections are like, preferably not a owner or supporter of this product. How long does a single file usually remain FUD and how long does it take for a new update to be released? Thanks in advance.

Yes it does.

And no, the only licenses I sell are 3 months, 6 months and lifetime.

Woland - August 4, 2013, 8:32 am

yeah, why crypted files are never FUD??

stub are always ~155kb

Detection rate: 6/35 is the best result.

Using "alterante setting" 34kb file becomes 1.2MB and still 6/35

Yeah I wanna buy this crypter but nobody has responded to my question:
How long are files typically FUD for before becoming detected like the guy above me (6/35)
I know that you can't say for sure, but is it on the scale of a few days or a few weeks?

I would also like to know how long it takes the coder to refud the crypter

The guy above is incorrect.

If you want something that stays FUD for a few weeks then you can PM me for a private inquiry.

And crypter updates are each 3-4 days.

Thought i might aswell post here now i been watching this thread hoping someone will post about it knowing there licence might get terminated beacuse the owner does not allow the truth on here and will go mad on pm if you do this to his thread, I even asked him a question before and got a nasty response, But any real business man would see this and actually start getting this crypter FUD.

So i've had the crypter for just over 1 month after paying \$50 for the 3 month package in all honesty its been FUD once in that whole month and im 100% sure i was using correct settings etc... I do pm the owner but hardly get responses, i appreciate your on holiday but why lie saying its FUD... Ive spoken to a freind that has same crypter he is also angry about it and others were thinking of making a scam report too.

I purchased xprotect beacuse Stev created great products like Blackshades and more this is why i have so much confidence in him but i always see the crypter getting updated but its never FUD always like 6/35 or 4/35.

Please Stev you need to sort this crypter out, Customers aint happy its a great great crypter but it's never FUD, I feel like it was a huge waste of money for me. I hope you dont take this response as malicious as i know when it gets updated frequently it will be one of the best in the market.

Want a honest feedback?

I bought a 6 month license and it soon will be over, so I dare to give a honest one, delete my license if you want, I am not using it as it is a piece of crap.

Many native files get corrupted anyway, NEVER, and I mean NEVER you'll get a FUD result. To get a file closest to FUD (6/35) you have to active some stupid option, which makes your file from like 90kb to 1,2 MB... FUD not even right after stub update which is not too often...

Ok now hate me, what a lamer I am.... but here you have honest feedback. Thanks, and if you want delete my license for being honest...
