NO LONGER FOR SALE. NOTHING EVER EXISTED.

**iNcLoSeR** - March 27, 2010, 1:19 pm

Looks Nice good luck on sales

**Yin** - March 27, 2010, 1:20 pm

Thanks, appreciate it. It's really a GREAT bot.

**Vertos** - March 27, 2010, 1:28 pm

Welp...

We've all been waiting for a big thing to come to HF.

We're all lazy and don't search for the good shit, nor do we know where to look. I have to say it, This one looks like it fell into our laps.

I've bought "WarBot", and the things I have to say, are almost hard to put into words. Some of you aren't into the botnet or for that matter 'the selling scene'. But those of you who are, This is where it's at.

This is the stability we've all been waiting for, This is the bot size we've been looking for. You wanted something epic, You've got it.  
(Thanks to Subwar for that!)

This is something new. It's not a Zeus, It's not IRC, This is WarBot.

I Vouch for this Product, and Vouch for the Seller.

One question...

If I buy a Bin, and later I get enough money to get Builder. Can I just add 115\$ and you give me a builder?

**ro\_Ot** - March 27, 2010, 5:44 pm

I agree that it is expensive. However, it seems perfectly justified if it is as good as it sounds. Good luck on the sales, it looks excellent and will attract the right kind of buyers. I wish my girlfriend would let me spend \$175 lol

**KiD CuDi** - March 27, 2010, 5:50 pm

(Mar 27, 2010 01:09 PM)Yin Wrote: [\[CITE\]](#) [WARBOT]  
by subwar

Warbot is a HTTP based bot that enables you to make large sums of money by selling installs and updates. What differentiates Warbot from most other HTTP based bots is its unique AJAX-powered desktop and "Task Reports". Task reports allow your customers to see the progress of their installs/updates in REAL TIME. In addition to these amazing features, the bot itself has the following features:

Extremely stable DDoS (HTTP, TCP, UDP) with automatic and manual throttle control

Small bot size, it's only ~13 kilobytes

Coded in pure C and assembler for speed and reliability

Has no dependencies other than standard Windows DLLs (Doesn't even need the CRT! Suck my dick.)

UAC Bypass

Works on Windows 7 AND Windows Vista

Extremely stable bot altogether, error tolerant

Lightweight installation process

The control panel has the following features:

Fully featured Desktop Environment and easy to use too!

Icon positions save!

Complete Windows

Live statistics view of your botnet army (updates every 60 seconds)

Requires very little bandwidth! This means you won't need to pay for a host if you don't want to!

Well coded, OOP PHP. The source is very well written, you'd like it.

Warbot is very secure. No XSS vulnerabilities. No authentication bypasses. No backdoors.

You can look at the demonstration video here -  
Code <http://dl.dropbox.com/u/5592570/WarbotDemo.wmv>  
Screenshot of the panel:

The price of Warbot is \$200. Included with Warbot is:  
A control panel for use for your needs from your army!

Warbot builder, which builds your bot so you can spread to your desires.

Full updates.

Warbot is only on version one, but will have future updates. Payment is by Liberty Reserve or PayPal (PayPal means you HAVE to be trusted.)

First 5 people to buy get it for \$175. This is really an exceptional bot, not to mention VERY stable. Do note that this is the reseller copy. You will make tons from it.

If you're interested in purchasing the binary only, then that's \$70.

If you're interested in buying, you can post here or private message me.

1. All botnets are illegal. This is an http bot, you visit a webpage. Do it from a vpn and proxy.
2. You infect people like any bot, except you control them from a webpanel.

Its hosted on a web page so you have to buy hosting. Subwar said it doesnt take up a lot of bandwidth either.

I dont get your second question.? The bin has the bot connect to your web panel, so nobody else can use it.

**Yin** - March 29, 2010, 5:24 pm

You can't resell a bin.

**razer\_mint** - March 29, 2010, 6:41 pm

Not sure if you guys already have this type of function on warbot but it would be nice if it can auto update the bot. lets say a bot has the old version and the owner of that computer hasnt turned there computer on in like 1 week...it would auto update to the new one once it connects and sees there's a new version.

Let me know if this is already added to warbot. if not then take it into consideration because im still waiting for someone to make one for IRC :)

Zer0x bot i believe not sure had an option to update all old bots to a newer one by like update file blank.exe 1.2 but new bin had to be compiled every time.

I agree if that was added to war bot it would make it worth more in a buyer prospective.

Sub has added a delay to the bot so if you have a bad host it will not be overload with requests this gives you much more stability when sending bots to warbot and a high outcome of bots this is purely used to take demand off your host and in future updates you will be able to pick the time before bots join and as you know updates are free :D

Hey Yin , Advice for future updates...

A slight problem is that the actual warbot itself once installed is highly vulnerable to SQL attacks.. and anyone who gains access to SQL DB/Tables will be able to find out the password in SHA1 format and then reroot it... its not very secure once they got SQL access.

So you should think of a way to stop that.

I think its slightly borderline-abusive that you delete crackers threads.. because they have the freedom to sell it in my opinion..

I mean.. take SickShell for example , we just stole the Gids Source and his shells and made a better GUI , but no one took that thread down?...

But yea whatever.. I don't make the rules.

**Crenzpy** - April 1, 2010, 9:14 am

Isn't that a bit hypocritical? Just cause you are a staff member and reselling this aswell you would have the access to remove things. There are being sold cracked ZeuSes, exploit packs and stuff but that is staying on the board but just cause you resell Warbot you can remove cracked Warbots?

Im just sayin, no offence to warbot or you.

**Yin** - April 1, 2010, 9:24 am

I didn't remove them? I removed one. The reason they probably removed it is because of this:

You're basically scamming the people. You don't see the big picture. They only have the builder, NOT the source. You can't do anything with it. You can give people bins that will probably get fucked up later on, and no updates. You act like these people have the source. They're scamming you out of money, that's why they're deleted. If they keep spamming the thread after we remove it, well obviously you're going to be banned.

Link me to crack ZeuSes. Also, I'm not a "reseller" of Warbot. It's a direct from coder sale.

Dear Snazzy,

I have been informed by one of my associates that you claim there is an SQL injection vulnerability in the Warbot Control Panel. These allegations are very serious because it impacts the security of every network using Warbot. While a threat or vulnerability in the Warbot control panel is a very high priority, dealing with false or untrue vulnerabilities is not. You claim there is a vulnerability in that we store hashed passwords in the database. If one were to steal a hash, it would have to first be cracked, as you cannot make the server accept hashes. Normally, hashes cannot be cracked easily if they are secure (14 characters, alphanumeric). It is up to the person who sets the control panel up to secure his/her password. Second, you claim that there is an SQL injection vulnerability within the panel. Your ignorance shows that you have not even began to read the source code behind the panel. Every interaction with the database is abstracted through a set of classes (which themselves can be abstracted and transformed for more functionality -- this is called 'Polymorphism' in OOP). Everytime you use one of these classes the classes sanitizes the data, and even calls upon callback filters to ensure that the input falls within a small range of validity. In short, please do not say there is a vulnerability in the things that you do not understand or have not spent the time to

research. If, you, by some means, manage to find a vulnerability, please send it to me, instead of bragging about it on page 25 of my thread. Thank you.

This is not a problem in the crypter, it is a problem in the way your host handles MySQL connections and how many it allows at any given time. I have resolved this issue in 1.2, and hopefully I will release it soon to my resellers. Quite often, your reseller will supply updates for cheap if not free.

Show me what settings you have used for ddos. The strength is exponential, which means 98% is not nearly as strong as 100%, although it may seem like numerically it is. Use 100% strength for a duration of 60, and use HTTP. When you enter a target for HTTP, include full url such as (<http://subwar.net/>), for others, use a domain name or ip address (subwar.net or 127.0.0.1).

The last issue you mention has been fixed in 1.2 and is merely a css issue.

can help?

Yes, you have not applied a fix to your MySQL database. Due to some unknown reason, certain versions of MySQL do not work properly with the installer, so you manually have to import SQL statements through phpMyAdmin (should be installed on cpanel 10 or higher). Simply go to phpMyAdmin, click on the database in the left hand side (typically \*\_war or \*\_warbot), then click on "Import" on the right hand side of the display. Click browse and select this file (<http://comsat.subwar.net/fix.sql>), then click "Go". After this, your bots shall receive commands.

Stability has been improved in 1.2, currently working to resolve all known bugs. The following has been fixed

- Ability to change URL dynamically
- Ability to change Delay dynamically as well as through the builder.
- Ability to change Interval dynamically as well as through the builder.
- Windows will appear on screen no matter what your resolution is
- Bots will attempt to register with control panel, if this fails, the bot will wait up to an hour to try again.

- Bot melts
- Updating
- Configuration settings are encrypted with a 128-byte RC4 key.

There are other changes as well, but I have not included them as they are not relevant to stability.

the \$50 is only a bin from the resellers.

this is:

A control panel for use for your needs from your army!  
Warbot builder, which builds your bot so you can spread to your desires.  
\* Full updates.

and i think with this you can resell bin's... im not too sure on that so dont quote me.

**magret** - April 5, 2010, 9:14 am

why spend 200\$ for this ?  
Because for 50\$ you have all (the builder, the panel and update)

**Punt** - April 5, 2010, 9:17 am

shit looks amazing, wish i had the money :/

Drop the price then I will buy :\ but for now way to high. Also it seems like i'm not the only one who thinks it should be lowered. If you do this I believe you will make more sales and more money at the end of it :o

If you want to buy it "cheaper" just buy a "bin" (Binary)  
You get it from Resellers like me or "Fish"

The people who think it should be lowered are the ones who can't afford it.

**Snipeshow** - April 5, 2010, 12:04 pm

Id rather have a high price so not a lot of people have it.

Especially kids who cant afford it in the first place

This.

You can easily find a reseller to sell a bin for 50 which really isn't that much.

**subwar** - April 5, 2010, 4:08 pm

Just letting everybody know, there are a few people out there selling "cracked" copies. The few "cracked" copies I have found floating out there have been backdoored. In addition to being backdoored, you will receive no support what-so-ever or updates if you purchase/use these copies. That is all.

P.S.: Warbot 1.2 will be coming out soon! :D Most if not all bugs have been fixed.

**Leg4cy** - April 5, 2010, 5:15 pm

Looks good, much luck to selling

**Tubz** - April 5, 2010, 5:31 pm

You should add backconnect so we can use bots as a proxy.

Agreed. Would be the first semi useful feature on the bot, DDoS is pointless tbh.

**Unspoken** - April 5, 2010, 6:07 pm

Pmd him hes not responding but ill wait:P

**Yin** - April 5, 2010, 6:21 pm

Talk to subwar about buying.

**Unspoken** - April 5, 2010, 7:45 pm

Link me to subwar and arnt you selling?

**t3rror** - April 5, 2010, 10:33 pm

Just curious, how often are the bots set to ping in? Is there a lot of strain on the server when you have hundreds/thousands of users connecting?

**-Darkness-** - April 5, 2010, 10:39 pm

**RooR ToKe** - April 6, 2010, 12:04 am

BUMP, this has to be the best ddosing method well for bot wise.

**Tubz** - April 6, 2010, 12:16 am

This is a definitely one of the best http bots on hackforums but I still think the features aren't great.

Like I said earlier I would like to see backconnect (proxy), Spreading features and real time screencapture.

**Cryptic** - April 6, 2010, 4:06 am

**Fish** - April 6, 2010, 5:12 am

Lol if any of the people have seen the copy thats been cracked its funny but I suggest you put lots of bots onto it move everything over to that cracked copy you will really like it trust

**z3r0fr3ak** - April 6, 2010, 5:16 am

lol, yeah its shit. you got scammed for 200\$ nice person.... yorick has shown the world how truly bullshit this product is. better go with spyeye or zeus. and also to yorick good luck with cracking zeus 1.3.2.1 - definatly aint going to be as easy as this bullshit was. (thanks to subwar ofcourse for his nub NO-STRING-ENCRYPTION)

**Fish** - April 6, 2010, 5:26 am

Well what would be the point in making the copy sub leaked hard to crack he wanted people to crack it

**z3r0fr3ak** - April 6, 2010, 5:33 am

Lol if you call hex editing hard to crack then yeah....

Subs just a nub which is why he made the mistake in the first place of not encrypting bot strings, and saying that he leaked it is absolutely a butthert move.... all yorick had todo was find the positions of the settings, in the binary, parse upto that position, write a new setting, find next setting position, write the next new settings, find the settings after that and write the next position and finally fill up the remaining bytes with NOP/NULL/PADDING i believe so that the size is equal to the original. He should have made it store the data in an array so theres no need for Original.exe but yeah, still good job.

**Fish** - April 6, 2010, 5:37 am

As I have said in other posts move all your bots to warbot and tell me how you like it

**z3r0fr3ak** - April 6, 2010, 5:50 am

lol no thanks, warbot blows. ill continue using latest spyeye and zeus. kthx.

**Tubz** - April 6, 2010, 7:13 am

rofl I guess no-one analysed this properly, It's strange how it redirects to a different server after 120 minutes idle time..

(I'm talking about the "cracked" version)

If I was to buy the bin would I get lifetime updates and some support or do I go to fish?

**zpanti** - April 6, 2010, 4:42 pm

have 100 bots attacked over http my server. but nothing happens?

also till 100/100 reaches time went over one hour

so bad right now if this not working and dont get help / support i payed for :(

**Taserz** - April 6, 2010, 4:45 pm

spyeye is most likely better it has better install rates

Warbot is not good! Firstly, hard to find a good crypter for warbot, second, HTTP flooding & UDP is too LOW infection. I tried on 400 online bots, ddos on a small website. Yeah, nothing happens to the site.

**Sammyboy** - April 10, 2010, 7:27 am

Anyone recommend any other programs other than this to test ddos'n sites? Very interested

i bought warbot few weeks ago. when comes new version?

i am using right now Version 1.1.1011

**Tubz** - April 14, 2010, 8:21 am

It's getting released in about 1 week apparently and it has improved stability and spreading features and can also grab IE+FF and cdkeys.
