I've seen people post links like

[this](#)

which links to a page to private message them, but it already has text entered in...
how do you do this?

Renowned - April 2, 2013, 2:19 am

Just copy the link location, edit the link to what you want..

well....where can I find one of these links?

I know someone who had one as their signature, but they changed it.

Hikki - April 2, 2013, 2:20 am

add these in URL to change whatever you want -

&message=YOUR TEXT HERE

&subject=YOUR SUBJECT

thanks :)

just what I was looking for.
