We are trying not to get cracked like all of the other Stealers out there,
the Panel was coded by Smoky and he let us use it. We modified about 50% of the PHP Source.

To many leakers out there that would post the bin + the Panel.
I am not risking this.

Europe - April 2, 2013, 3:06 pm

Looks nice! PHP panel is from another stealer right? Its customized though.

Why is this different than ISR Stealer?

Stefanie - April 2, 2013, 3:48 pm

I have never tried ISR Stealer but I just made a research that ISR has dependencies and doesn't steal Steam.

RR-Stealer has no dependencies and steals Steam and many website's such as Amazon,Ebay and Netflix good. Many new doors open for you.

ISR is coded in C++ or ASM I believe.

ISR steals all of that aside from steam.

I'm looking for a new stealer, but I want to make sure that it's actually worth the money.

I have never tested or seen the code of ISR, so I can't tell you a difference.

But I can say that RR-Stealer is a god if you are Spreading on Forums, cause it steals 99% of your Passwords you wont miss any.

Sorry but I can't tell you more cause I have never tested ISR Stealer.

i used ISR for many times, its powerful, its strong point is easy to crypt and yes, now it doesn't support all browsers versions but its my favorite.

ISR doesn't steal steam username from the application.

good luck
