? Information

This crypter has a really sweet user interface.

The crypter goes straight to the point. What is a crypter for? to crypt files! For nothing else!

## ? Features

Was really suprized how well the crypter works.

I tested: Usb Spreader, Hidden Prozess, Anti VM, Anti Sandbox, Melt, Download after execution, Binder, Assembly changer, Icon.

All tested Features worked very well for me. Better than I imagined.

The only thing that I didnt like that much was that the Window of the program is to small in my opinion. But I am sure that this could be easily fixed for the future.

I executed the final crypted server on 100 Bots and got almost every bot. It seems to be very stable and has really no dependencies.

Proof:

## ? Overall ? A+

This crypter is with FileProtector one of my first opinion when it comes to crypters. [tested really much different crypters]

I think I will stay with that crypter if it stays like it is now.

I can only vouch for these product.

Vouch TinyManipulator, very friendly and allways there to help. But this product isn't known for its support its known for its many functions and compatibility with Bots to Rats and Stealer's to Miners, you can crypt 99% of the Files out there. Don't hesitate to buy TinyManipulator for it's price its just the best deal you can get.

It depends upon the file you crypt, my blackshades server which is around 650KB gets converted to ~800KB after crypting.

**Phreaking** - April 12, 2013, 11:15 am

Works really good and the owner is not a douche like most owners I recommend this to anyone who is serious about crypting and needs a quality product.

**Punked** - April 12, 2013, 8:17 pm

Huge vouch for thmaster100 and TinyManipulator.

It has the best support hands down of any product I've encountered on HF. I had a problem, and the owner was quick to refund me while trying to get to the root of my problem and fix it.

We will now work to fix the problem I had with getting the software to run, and then I will repurchase this when ready! Definitely worth it with support like this!

Highly recommended. ?

What Rat/Bot client do you use?

You can ask thmaster100 for your queries he would answer that.

Double Time Enjoy :p & wait for the HUGE update :p

good luck

**\_\_Digital\_\_** - May 22, 2013, 6:01 am

i purchased this crypter the other day it has meant my expectations and the support is fantastic and yes still fud :)

**kulira2** - May 23, 2013, 12:50 am

this crypter is fud, the stub is a little bit oversized, but the author included a downloader, which is great.

I only suggest the author to please make a file attributes cloner, that would rock

**Mr. Gregory** - May 23, 2013, 11:22 am

Does it work with Beta Bot? It has specific features that the crypter may mess with.

Thanks!

**Jeryab** - June 6, 2013, 10:19 am

When I use the function STARTUP in crypter options - server is installed in a folder "%temp".

If clearing the cache of folder TEMP (with cleaning programs such as CCleaner), then startup of the server is not working (when restarting the system)

thmaster100 I beg you please change the installation folder instead of the "%temp" at which any other (System, Windows, AppData or ProgramFiles or another) when function STARTUP is enabled.

YES , YES & YES lol

I tested with bifdefender it didnt bypass in first time but later I changed the emulator

then it did after wards they detected it again <the anti emulator>

& since it uses BD detect the behavior it will detect the runpe :p

honestly i bought this and the support is so perfect ! i love you thmaster100 you are a real boss

**Lime Whips** - June 8, 2013, 10:42 pm

man i just have to say the FUD time of this crypter is GODLIKE never seen a crypter on HF be FUD for longer then a 2 weeks lol

**JonDough** - June 9, 2013, 7:15 am

Got this crypter after buying 3 others that did not work with my bot... Probably my fault, should have asked for test crypt before buying. Well neither of those 3 worked (even though 2 said it would work with mines... but i didn't get test).

Out of (partial) frustration I got this crypter just hoping that it would do the job... and sure enough it did. completely FUD (scantime and runtime) and works with my server :D I'm happy and have

officially found the crypter I will continue to use.

Fast responses too. I sent thmaster100 a message after I purchased last night. He was sleep when I sent it, and once I woke up there was a message responding to what I asked, as well as the download link :) Needless to say, I'm 100% happy with this crypter :)

**SBMK** - June 9, 2013, 8:15 am

nice crypter! works good with fenix irc bot :)

**thmaster100** - June 9, 2013, 11:21 pm

Hello guys

thank you for your great vouches :)

it's Still FUD for very long time :D

Vouch for thmaster100

Excellent support and excellent crypter, has many options, including the function of Melt, which I have not found in many other crypter or it was but required net framework.  
This cryptor with no-dependencies is exactly what I need.  
Wish you success in future sales

**jay0077** - June 10, 2013, 12:24 am

There are just two crypters in the market ...TinyManipulator and others.

**richardaustin** - June 14, 2013, 5:20 am

Hi Thmaster

You are the real thing

I have bought loads of crap crypters for my Zeus botnet, that never works  
crypters like Ilibrary crypter, Cube crypter, infinity crypter and lots more  
even the crypters that work the sellers are always in a hurry to get my money and never give  
support or reply to PM  
But your support is instant and great.  
I love your product and support,

Pls keep this up.  
I Vouch for you man, Thumbs Up 4 you.

**\_\_Digital\_\_** - June 14, 2013, 5:49 am

iam here providing support until i move in 16 days and then i will return with support once i have  
everything turned back on... have questions let me know or having an issue let me know

**Knight King** - June 14, 2013, 11:36 am

Product 20000%

Support 10000%

I had some issues with the last version, the latest version works great for me, and it can only get  
better.

I vouch for this crypter.

Although the stub size is pretty very large compared to one's i've used in the past, but  
TinyManipulator has got Everything I want in a crypter and it's also 100% FUD.

**LORD OF FULL\$** - June 15, 2013, 2:39 am

wowwowowowowo 100% vouch for this guy his customer support is very incredible, i like you jy

**Antion** - June 15, 2013, 11:03 am

Ok I have to vouch again, this program is really something .... always fud ( NEVER RECIVED A  
NON FUD OUTPUT) tested with several bots such as netwire and betabot all functions of betabot  
work ( AV killer , userkit , persistance and bk)  
have to say thanks also for great updates and fast support... GL

**midzasaur** - June 15, 2013, 10:03 pm

I concur, mutex does not work. Many instances of file end up flooding the process. I'm sure it will be fixed in next update, and become more stable.

Overall, it's a good crypter.

Hi , I am working my butt off to try know why you getting this

I released the new update earlier & I changed some encryption in stub

to see if they are the once are making your stub detected  
also I am not setting with you in the same computer knowing what all you doing so ya I am working hard on it & on every update I do or I release

and what making me more crazy not everyone having this so ya I am trying to fix something only for you and I was not like most sellers here dost not supports or replay , I am kinda working on something you only got , you really should be little more painted

Coder updates almost every day or as at when stubs become detected which is great. I was wondering that the in built scanner works for you,

It doesn't work for me.

It can take a while for the results to popup. Usually it takes about 20 sec for the file to get scanned and show results. ?

Hi ,

Like I tole most of you before , I didn't code the scanner & I don't own the API of it so , if it's not

working for you simply use elementscanner or razorscanner what's the hard thing of that ?

another thing if you got problem with the crypter USE THE SUPPORT SECTION ( [jyproducts.org/support](http://jyproducts.org/support) ) , that's why I made it up for ???

I wrote that Already in TOS

I never left any customers without good support of fixing problem that it's OLNLY for HIM .

You are right. Your crypter works great, (If not the best for it's kind). Update and support is top notch.

Scanner does work if one wait's for scan result without switching windows.

I use Netwire, and get best result when I don't have to use any crypter features, yet still get my file fud.

Sticking with this crypter for as long as it's up.

Hi again

just released new stub

SV 3.1.2

<http://razorscanner.com/result.php?id=86099>

I fixed couple of things from the old one  
made the Size 200kb less

enjoy :p

**TheWarrior** - June 22, 2013, 11:12 am

How much is the stub size ? I am looking to buy a crypter and need to survey before i buy. And also are you thinking to close it in the next few months ? And when do you release the updates if it gets unfud ? And please don't say like in 24 hours, because i think they are all lies and they don't do that.

I hope you can answer all of my questions.

Thanks :)

The stub size is currently 700 kb and decreasing with updates.

This project is in for the long haul. We will not close anytime soon.

thmaster100 is actually very quick on updates. usually if it gets detected it's fud again withing 48h

So, if I select Antibotkill, do I still need to select startup along with it or not?

I have a few suggestions for the coder's consideration while he is in the process of recoding.

1. Custom injection name. The current single injection of svhost.exe can be blocked in firewall and the crypter can be rendered useless.
2. Hidden startup in msconfig. The startup entry is simply too obvious at present in msconfig.
3. I understand that people ask for more and more functions, but that ultimately limits the RUNTIME FUD to hours. Even if I am only using startup and anti-emulator, many others are using lots of other functions and getting the stub detected in the process. Perhaps you can run two variants of the crypter at the same time with different stubs. One limited to custom startup/injection, hidden startup/injection, and anti-emulator. The other...well I don't care whatever goes in the other.

Hope you will consider.

the old version was 100% compatible with it ,

not sure with the new one , I asked a lot of users about one bin to test with new version I could not get my hands on one so I don't know yet

You either buy this crypter or not. People should stop sending me PM asking me to do test crypt for them and all sorts of shit.

I am not the coder neither am i TinyManipulator support, I am just a user/customer and can only give my vouch.

My vouch and other countless satisfied users will count for nothing, if the coder don't get reward for the hardwork put into this crypter.

Buy the crypter or contact crypter admin or support. NOT ME.

My undoubted vouch still, FUD time is Long in new update, and it's now stable. Works with Netwire 100%.

Hello ,

Before I talk about the update I want to tell you somethings  
tomorrow is the start of "Ramadan" and it's something very impotent to me  
and it's in my believes , so from tomorrow till same date next month I will be quite busier then  
before

I 'll be able to connect one or two times daily  
so try just to contact the supporter little more .

PM yugurt for support : <https://hackforums.net/member.php?action=profile&uid=1639876>

now the update ,

TinyManipulator : V 5.0.2

New Stub Released : SV 4.0.2

Change log :

- [+] Recoded the USG ( unique stub generator )
- [+] New Encryption algorithm add to the stub
- [+] Recoded the downloader
- [+] Fixed bugs in the Crypted file with WinXP ( reported by customer )
- [+] Crypted file & Another Crypted file are ( 90-95 ) % different
- [+] Improved the stability
- [+] More time FUD
- [+] Refused the stub again from only 2 detection that had from the last update

I am considering of adding Hidden startup and couple of other things & I hope I 'll be able to :p

Note : informing that the crypter working with IM & Netwire ,  
and in your settings if it's them or other RAT try not to use injection  
metl or copy or installs server leave this all for the crypter to do.

Yes,in the crypter there is an extension changer,if you watch the review you will see it,but usually the files save as default as .scr (screen saver) to be less suspicious

**arsenel** - July 16, 2013, 1:25 am

is it fud atm?

I successfully used this with DarkComet. Huge amount of masses ;)  
DC have keylogger too, and it works f\*king cool with this crypter.

**GeorgeH** - July 16, 2013, 11:42 pm

Crypter is working great with Darkcomet. Excellent functionality and a very simple to use interface. I'm impressed most by the excellent service the seller provides. Spent some time on TeamViewer assisting me with a few minor things that will ensure me the highest possible execution rate. Also, it's fud :)

Thanks to the dev ?

**rudyburriss** - July 17, 2013, 12:37 am

After a lot of search, I have decided I will use Dark comet, does it work with all version? I currently have the Dark Comet V5.4.1.

Hi

new update :

V 5.0.6

SV 5.0.5

log :

Fixed the bug with AntiEmulator (If dose not bypass avast Check AntiEmulator all will go good now )

This version should be the most stable one :p

Still FUD :p

Nice crypter and very nice support :)

He tested my server for me if its working, and answered really fast on every single problem that i had :)  
If u want a good crypter with even better support, go for TinyManipulator.

He tested my server and gave me advice what to do.  
My favorite one from now on.

I vouch for this guy ... 0/36 FUD .. I also tried other crypters on hf but nothing beats this crypter.  
Works perfectly with Darkcomet and cybergate.  
It also has great support (very helpful for begginers) ... I recommend

does it bypass kaspersky pure 3.0 system watch. one of my crypter gets caught by it and the other one doesnt get caught but giving unknown publisher warning.

so i need a crypter which bypasses kaspersky pure 3.0 system watch and eset smart scan and also i can change assembly

Dude,any extension spoofer you try in HF will not be able to completely change the extension of a file,basically it isnt possible,because each file has its own extension like the server has (exe),you cant just simply change it to mp3...if you do the file will get corrupted cz you are making it to get recognised by media softwares...get what i mean ?

One of these cases:

- 1-you reinstalled windows
- 2-trying the crypter on another pc
- 3-your license ended
- 4- or it's just an error that happened,because it may have not connected to the database properly,just exit and retry..if still reboot and retry ...if youre still suffering from the issue send me pm

I have issues with crypted Netwire running on 64bit, Crypter works great and is 100% FUD for real, but output crypt only works for 32bit system and cannot infect 64bit. Anyone having same issues?.

Support don't seem to have an answer to my problem.

**thmaster100** - July 30, 2013, 10:45 am

@sadsoul

Hi the support said that ( I dont have net-wire even if you sent me your server I dont have 64 system to test it with , I answered you that I have bot's working with all my RAT's on Win7 64bit , and also I said that I can't test on them because I don't RAT only for some personal matters & ppl I know )

I guess that exactly what I said in the support

that's my RAT pic

<https://i.imgur.com/kBHGvCA.png>

as you see I got only several bots only for personal issues

I can show you the njRAT or DarkComet (on Win7 64bit ) , even I can show you bifrose in Win7 32 system ( bcoz this all the RAT's I have )

I did my part in support extremely great with everyone got problems , even I spoke with french customers in french even my french is so poor but I managed it .

I am starting to think to do little change on my TOS

bye

I love this crypter .. smooth .. and easy to use .. Am Happy i settled for this crypter . better than so many i have tried .. and the customer service is great too .. keep it up bro ..

**Slash3rX** - August 6, 2013, 11:36 pm

This is a amazing crypter it works as described. I purchased over 5 crypters none of them were completely fud except this one. Even if the scan was fud for other the run time wasn't but for this crypter it was.

I had issue getting it perfect for my needs, jy helped me out on skype spent ample amount of time helping me perfect it to my needs. This is a great crypter it does as advertised by seller and actually is fud not only scan time but run time!!!

can't go wrong with this crypter if you don't want to waste money on crypters that are 1/36 or 4/36 ect.. this one is for you and support is amazing just get on skype if you need help and jy will help you out.

Thank you for all your help JY!

Hi ,

@Dc0d3b0y , @Slash3rX

thank you guys :)

and finally the scanners are back  
we still FUD for the least 5 days , good luck everyone :)

@Da†Ha× : more is coming for what you asked :)

@Ucef : check .net support and it will :) ,

@goodman12 : there is reason we have great support & there is reason we have Videos in first Post

THE SCANNER GUYS , I DON'T OWN THE API , it was JUST GIFT , ( removing it next update ) <<  
I said that in older post

good luck ,

More than 2 months using this crypter, It's become the only true FUD crypter, and i get weeks of FUD even with massive spreading. Other crypters claim to be FUD and get lots of fake vouches, until you buy and you find out it was a joke, if you complain you get banned. lol

But @Themaster100 is different, always listening and quick to help too.

Update comes usually less than 5hrs from detection. No other crypter is that fast with update.

Keep the good work going mate.

Great product, nice guy...

I am completely satisfied. \$50 well spent.

Usually when it isn't fud it's because the server will be created from a long time, so if you create a new fresh server and crypt it you will see that it's 100% fud so I really recommend creating a new server every 2 days or less..it takes like 5 seconds

You are damm right about this. I was having 2 detections from new crypts some time ago, when I generated new server and crypt just like you said above, it's become 100% FUD. Glad you noticed it too and shared. Would help some people.

Really nice looking crypter you got, Thanks for the help with others things.. I know everyone would be happy with your crypter I Vouch for this Crypter.

**PinoyInKuwait22** - August 24, 2013, 1:22 pm

when will there be a new update :(?

**thmaster100** - August 27, 2013, 1:10 am

Hi guys please wait for me there is crush down for all the internet in my state I had to travel to another state just to post this to you

please wait for me

thank you

Hi

I updated the Encryption stub 2 times from the SPAM emails I was getting even the crypter WAS FUD

so I just had to make 100 % sure since my internet just got back like 2 hours ago from last 4-5 days

For my OLD customers that loved only BotNet's I am finished with new Crypter MENT only for BOTNETS like Zeus ,betabot , solor , etc ...

it's Finished already & I dont have release date but it's soon hope so

this what I can say ATM good luck to you all & sorry for the past days :)

enjoy the FUD time like always XD

Hello people,

100% VOUCH !

i bought other crypters from HF cube and data protector , but they are not as good as this  
tinymanipulator . Last time i used it i got 1month FUD time , and with the other crypters 4 days  
maximum , usually 2 days . i recommend tiny manipulator above all others.

And it's got great tech support . i think you should buy it always for 6 months,it very stable and it  
doesn't have bugs.

You Guys at TM have really gone to town with this crypter..I wasn't so sure when the crypter first started up..but now I am 110% sure..This crypter has only got bigger and better..so if you are looking for a crypter with a good fud time... don't waste your time or money buying any other crypter on the market..Tiny manipulator is the crypter to buy u wont have any regrets I can assure you, worth every penny spent.. It has many features, and the support is top notch..the FUD time is awesomely long..I was amazed..its ten times better then before & only getting better. These guys have worked very hard on getting this crypter perfect. Good job guys!

with this crypter..I wasn't so sure when the crypter first started up..but now I am 110% sure..This crypter has only got bigger and better..so if you are looking for a crypter with a good fud time... don't waste your time or money buying any other crypter on the market..Tiny manipulator is the crypter to buy u wont have any regrets I can assure you, worth every penny spent.. It has many features, and the support is top notch..the FUD time is awesomely long..I was amazed..its ten times better then before & only getting better. These guys have worked very hard on getting this crypter perfect. Good job guys!

wow that's alot for me :D

thank you man

You should generate new server for crypt from your rat, this is usually the cause for the detection, don't crypt server you generated before, also icons in most cases, TM is still 100% FUD for me,

thank you for the help

@zkillz

it's all about autoit , you can just compile msgbox file it will give alot of detection , many crypters in hf coded in Autoit so it's flaged alot

even the main crypter was detected and might still didnt scan it for while

Very good crypter works with most rats  
bought it gets updated every time  
stays fud and good price  
VOUCH!

**SmilingWolf** - November 2, 2013, 7:14 am

I can vouch both for the crypter and for the person behind it.  
The crypter is hella good and thmaster100 is really nice to people in general, not only to people who are going to buy his products. Oh, and he is a really cool guy ?

**thmaster100** - November 3, 2013, 8:41 am

This crypter before now is the best i've seen on HF, none of other crypters on HF can compare with it at all. And after this update, It became one of the best crypter on the internet.

Longtime FUD = Guaranteed  
Friendly Support = Guaranteed  
Execution rate = Extremely Very High  
Bypasses EVERYTHING.

I am just happy I met this guy thmaster100 and bought this crypter, he has a very good personality, always listening and always going the extra mile to help. ??

I will still with this crypter till you decide to pull the plug. ?

Hi , no the crypter do not work with botnets anymore :)  
stub size is like 600-700 depends on the release we do  
check out my other crypter you might be interested more :)

**Treeple** - December 1, 2013, 6:28 am

Had to format my windows while not realizing I would lose my license. I contacted thmaster100 via Skype and gave me a new license without any problem! Superb!

EDIT: Whoottt support just is amazing. Couldn't get the server to work, or it did run but not showing up, or the server keeps hanging itself after execution. So again I contacted support, this guy is amazing how he immediately saw what I was doing wrong. For other NetWire users, you must uncheck every option in your NetWire client in the 'Installation' tab or it won't work. Use those options in your TinyManipulator. I knew that they interfere with each other, but I did not know that even the 'copy to local path' needs to be unchecked! So thx again, learning every day!

Vouch for this guy! Support is great, and keeps getting better every day!!

Hi guys

thank you all for the vouches :p

I am sorry for late because of the accident & all I cant even finish coding :(

anyway I got new update for you

TinyManipulator 5.4.1 :

New encryption Stub

New encryption algorithm

reFUD from Avast & AVG ( the only detection we had )

expecting another month of FUD :p

Hi

just replay on your support email my self

looks like we missed your email mate chill all customers get's couple of days for free

check your email

good luck

**Zbnt** - January 18, 2014, 8:27 am

How come when you check off some of the options such as run start-up, mutex,EOF ect.. its corrupts my file and get an error when trying to run however when no extra options are checked and just crypt it is fine ?

Well if your file already has it's own startup or if it doesn't need eof it's pretty possible that it breaks.

Vouch, working crypter. There are better ones on the market but this does the job well enough for me, plus it was cheap.

Tiny Manipulator is for me the best crypter on HF. i have tried many other crypters in this forum but none worked as i wanted it.

Good Crypter, good coder, I throw my Vouch 99% for this crypter. Best of all it comes cheap.

Keep it up JY.

**netwise** - April 9, 2014, 1:25 pm

I want to express my gratitude to the seller. great product as well as support. The seller is always in touch, and kept quietly explains what your problem is, what if you do not understand something. Constant quick updates. Respect to you brother for your patience and your hard work. Strongly recommend to the acquisition.

Hi mate

it's the default icon , but if you got problem changing icon contact us in skype we will be helpful !

if you got short problems also you can just send PM :p

I'm having a small issue with the crypter. Please accept my Skype request ?

**degado** - August 18, 2014, 9:50 am

received a crypter and is very good very good support on Skype recommended cheap and fast is well he told me to what settings to use for my program vouch

**Sikes** - August 18, 2014, 5:53 pm

What ever happened to the melt feature? I can get the crypter working with DC but people are able to simply delete the .exe from their computer and recycle bin and boom, it's gone. I really need a way to melt it and I can't use the melt feature on DC because that requires me to use the full editor and that fucks everything up.

nop & I dont think I've seen crypter in hf do that ,

that was an old tool but works only for one version of DF :p

good luck

This crypter's FUDness is amazing but I think the thread design is outdated regarding screenshots of the application. Can anyone please upload some screenshots just to see each and every features/tab it has?

Would be greatly appreciated :)

Does this work with Imminent Monitor, DarkCome and njRat?

If yes then I'm buying this

thmaster100 - August 23, 2014, 8:44 am

yes it works with all of them :)

contact me in skype I help with with IM & njRAT settings

No doubt this is one of the best Crypters there in this forum. took a year using it and no complains. as almost always fud.

**jbrock580** - August 29, 2014, 8:36 am

This is one of the best crypters no doubt, themaster also very friendly will continue with this crypter for as long as it can stay

**NewGeek** - September 1, 2014, 5:09 am

Bought the crypter last night, it's been over 16 hours now and I have contacted support.

Will provide a review once I receive it.

Woo hooo!

TinyManipulator is one of the best crypters here on Hackforums.

Out of all the crypters I have, this one is the longest FUD !

**Knight King** - December 16, 2014, 2:23 am

TinyManipulator has been and will always be the best crypter on HF. Other crypters I have used are just some piece of crap. Most times TM stays FUD for weeks.

The most beautiful thing about this crypter is not just guaranteed long time FUD but also a very efficient USG. Every crypt is 100% different.

The crypted output executes on every PC 32/64. Also it has full unicode support.

The best of it is the guy behind the crypter, He's a very nice guy and very friendly.

Thanks @thmaster100 you are very good person and kind too. I have been a customer for over one year and will always be customer.
