Just use this: <https://hackforums.net/search.php?action=getnew>

It's the left-most link near the top that says View new posts.

view new threads and view new posts are the same thing so one got removed

Omniscient decided to remove it. It's just a duplicate of view new posts.

There was a View Today's Posts and View New Posts as far as I remember and they both acted the same. So, Omni removed one.
