Huge Vouch for this amazing crypter and EVO!

janoycresnova23 - April 4, 2013, 5:37 pm

Why you should buy 2012 Crypter?

- It's simply one of the best in HackForum's history.
- It's very flexible and can be compatible with the best in the crypting world.

Why you should trust E V O?

- The man handles a lot of ongoing business here right now.
- Very professional and trust-worthy.

src80 - April 4, 2013, 5:55 pm

Will be getting it, so definitely review from my side.

Looking forward!

yes it works, its scantime FUD 0/37
BUT

runtime its not FUD: tested with antivir and kaspersky, both detect it..

is there any support???
or is it runtime detected for others too?

It's 0/35 on any scanning website.
The runtime detections are being investigated right as we speak.

sepsep12 - April 11, 2013, 4:20 am

with the right settins you get 0/35, but only scantime.
but this is total useless!

when you run the server, it is detected (tested with avira and kaspersky)

dont know when it will be fixed...evo said yesterday that n3onight will look for it yesterday, but it is still detected....

2012 Is a very Advance Crypter,
If you Can get it Scantime FUD then you Can easily get it runtime FUD,
The runtime Detection Mainly Comes from the Custom process name.
Use a Clean And Legit Process name and Will be FUD.

regarding Detection from Kiss: Add to startup Is detected by Kiss,
Just use hkcu startup and will be fud from Kiss.

I will start recoding 2012 Crypter Soon and Plan to add many New Features to it,
Planned to Add:
- New Encryption
- Unique Output (AKA USG)
- New start up methods
- Some more Features.

Very good Crypter! :)

The crypter itself looks clean, he only communicate with the update server and netseal (hwid). (As far as i test this (quick))

Also Sandboxie emulation is possible.

The Output is really FUD! ;)

You have many options to get the file FUD for a long time.

The AV Scanner works fine and the output size is really small!!

DC from 658kb to 102 kb with icon. ?

Really good crypter guys!

Big vouch for you!!

jaisyxxx - April 16, 2013, 8:32 am

sepsep12 - April 16, 2013, 10:43 am

Edit: talked with N3onight, very fast answer now, thx so far...

he will fix the runtime detection....

Do you guys only scan it with builtIn Scanner, or do you also try runtime detection??

for me its detected when i run the file!

N3onight told me that i have to use a clean and legit process name

for getting it runtime fud. i tryed about 20 different names, alwas detected!

the service isnt good, the answering time is very very long!

For example: i wrote EVO on skype at Friday 12. April
He didnt answered yet!

First tim i had this crypter the service was very good, now its very bad for me!
I would charge back and buy an other crypter.

Ho?u? - April 16, 2013, 12:08 pm
do you use an old Version?

evo cantt help you with the old one..

and yes i try runtime detection ;)
after a crypt with this shit fileprotector the file was fud but if i scanned
it with avira then it catched the file.. that was serious.. also elementscanner
couldnt find a detection.. after a day the scanners show the right result.

you could try your file by yourself, but this crypter seems really good
kis and avira couldnt find the file.

jaisyxxx - April 16, 2013, 1:12 pm

The crypter is very good indeed, but an FUD update must be released for old customers

I understand that you want an update for the old program, but:

1. I'm not responsible for it
2. This isn't the sales thread for it

So please stop posting about the old crypter in this thread.

Thanks.

I may be interested in buying this crypter for lifetime, I just have a few questions.. How long has the crypter been going, are you planning to keep going with the crypter and make it FUD once in awhile for a year or more? (Dumb question, I know..), When you say '1pc install' does that mean if I would get a new computer I will have to rebuy it?, I will get 300 free installs if I buy the life time version of the crypter, correct?

Best Regards,
Alu

Best Regards,

It has been running for more than a year and we plan to keep this up for even a longer period.

Regarding the "1 pc" thing:

You don't have to rebuy it. The first HWID change is free, next HWID changes cost 5 USD.

And yes, you will receive 300 free installs with the lifetime package.

You will be able to bind it with any extension you like.

The FUD duration is like a week and updates usually come within 24 hours, so whatever package you're buying, you won't have to worry about the FUDness.

I Tried almost all paid crypters that are available on HF,But this is the best crypter i ever used.Worked with all RATS,Stealers... that i tried.I sent my server to 24 persons on facebook now all 24 are slaves on my RAT. ?

Vouch! Really nice Crypter with a lot of useful features. ?

This works for Silent Miner?

Count me In buddy! Can anyone confirm that It has stability with Silent Miner?

Yes, 2012 Crypter is compatible with Silent Miner.

Let me know what you think.

OTMB - April 29, 2013, 11:54 am

does this also work with blackshades NET? that's what i'm using and i see other blackshades products there. either way, i'm probably gonna buy this when i can pm you. i don't want to spam the forums for enough posts either lol.

Xparn - April 29, 2013, 1:23 pm

I still waiting for my installs! I'm quite bored now because i've been waiting for 2 days now! :(Posted my direct link again to your inbox E V O.

And also i tried to use my server on vmware it works when executed but when i restart the vm i get this;

Not really.
Also, I can't accept it at the moment due the unstable market.

It is coded in C#, as you can see in the thread title.

This means it has Net Framework dependencies.

Note that almost every computer these days has Net Framework installed.

Mine isnt updating either not that I have any use for it right now anyway. Still trying to get my BS up and running since I was hacked. Hopefully it auto updates for me because I am not real comfortable downloading anything any more.

soldizach - May 24, 2013, 11:05 am

@xtofke10x and @nelram I had the same problem, contacted support and they said that they had not uploaded the update properly to the server

Everything is ok now

I kind of wish that were true, I bought this directly from N3o a few months back. I bought it through him because I have been dealing with him for a long time. What I did not realize at the time I purchased it was that there was a difference between this 2012 crypter and the one that he sold me.

EVO tells me to get support from N3o and N3o is almost impossible to get in touch with. If I could somehow get my money back from N3o I would buy it through EVO.

All my work is paused almost about 6 days. Who will compensate this 6 days, that I lost not because of my fault? I paid for all 30 days of FUDness in month, but last 6 days I don't getting this service.

Maybe the creators of 2012 crypter should to return all that days of license for their customers?
