Thread: [HELP! DarkComet and Infinity Crypter! HELP!](#)

Funkson - April 5, 2013, 9:50 am

Hello members!

I think my FUD Server is corrupted. I'm pretty new in this world. But im learning

But here is the case I need someone who know how Infinity Crypter V4. works with Dark Comet.

What i have done!

- Made the server with everything unchecked! in darkcomet
- I've tried almost every settings in Infinity.
- I've tested the FUD server and the server in sandbox = worked
- I've tried to test on my notebook! - it showed up as a victim!

I have done everything! Search on hack forums, theres not much about infinity and dark c. and youtube is empty of turtorials with these programs.

If you've tested the FUD server in sandboxie and on your notebook and it worked both times then I don't see what the problem is. That means that you set it up correctly and that it's working.

Chloë Grace - April 5, 2013, 10:32 am

I don't get it. You've said it appeared as a victim, therefore surely it's working?

Funkson - April 5, 2013, 10:40 am

I see! I forgot to say that i have, send the file to people, and they have confirmed it and and run it!

But there was no pop up on the victim board that why i'm confused.

Are your ports forwarded correctly? It wont work if you haven't properly configured them.

Angel Beats?? - April 5, 2013, 10:44 am

You have to set it to your external IP for other people to connect to you.

I have portforwarded my router 100 and checked with open port check tool = succes!

Where ? on my router.

Is it my External IP i have to setup in portforwarding on the router instead IPv4 ?

In darkcomet when you make the server, instead of putting 127.0.0.1 put your external ip from, <http://whatismyip.org>

Funkson - April 5, 2013, 12:15 pm

That's what i'm doing. Im doing everything right. But when the server get to a victim it wount work..

This is probably an error with your port forwarding.

No port is totally succes with green color!, but could it be corupted, because of the Crypter? If it's corupted then it wount go through sandboxie? am i right?

Omg, i think i have solved the problem..

I hadn't disabled Windows Firewall.

Don't you guys, think that's the problem??

Its blocking my victim/slaves?
