RAT's stand for Remote Administration Tools.

They are used to remotely connect to a computer, and do whatever you want, such as open files, delete files, run files on them, spy on them via webcam, etc;

Np.

DD7 - April 18, 2010, 8:02 am

A DD 7 Crypter ? Seems like a fake for me ^^

I think I didn't ever release one , did I ?

Be careful please downloading this file.

It's not from me, I'm gonna check it in sandbox

It's not from me , remove it immediately, saw it on youtube too..... infected probably

(Apr 18, 2010 08:02 AM)??? DD 7 ??? Wrote: [\[CITE\]](#) A DD 7 Crypter ? Seems like a fake for me ^^

First of all, I never ever infect people.

And how should I know? These aren't mine at all, I just made a compilation of tools for everyone to choose from, it's your problem if your infected, not mine, so don't go raging on me.

BTW, I can't remove it, I'm not L33T or UB3R.

It's your problem if you download something infected that I put up and never knew of. I didn't make the crypter, and no, I don't even know what the hell the crypter is, and who you are.

Citric Meltdown - April 18, 2010, 8:51 am

Epic shares bro ???

No prob. And don't download DD 7 crypter, it's not mine, and it's not DD 7's, so most likely it is malware.

please post passwrd for Sub7, Prorat, Netbus, Raptor RATS all in one :

-mothered- - April 23, 2010, 6:44 am

A nice compilation Indeed mate. There's a couple of Keyloggers, and a few Crypters, that'll come to good use.

Appreciate the share :)
