Thread: [How Can bypass a index.php so i can acces index of files](#)

HelpHackz - April 6, 2013, 7:09 am

for example i want to access all the files on a site it only contains these files index.php, index.html, send.php and a .txt file related to the send.php is there such way i can have access to this site here is the site i want <http://jamesdobson.host-ed.me/> is there anyway to access the other files. cheers

That site times out for me. Check the source of each file though. I know with LFD a lot of the times the MySQL DB details can be contained within the index file source.
