project neptune NOT FUD but works better than unknown

Kiev - April 7, 2013, 4:02 am

FUD means it will not get detected by anti virus as far as I know.

Ekoplex - April 7, 2013, 4:03 am

(Apr 7, 2013 03:42 AM)rwk.williams Wrote: [\[CITE\]](#) I dont get all of this FUD stuff.. could you explain a bit more? And how does it work better?

Fully undetectable. You can crypt a detectable keylogger like Neptune to make it FUD". The program doesn't get picked up by any antivirus.

Snowflake1337 - April 7, 2013, 4:15 am

I Would say Project Neptune, works fine for me.

kapakapa - April 7, 2013, 9:18 am

I testet both, project neptune works better IMO

nill - April 7, 2013, 9:48 am

I've tested ProjectNeptune and it works, and is quite simple to use. I'll also be testing Unknown and Limitless today.

But I can't figure out how to crypt ProjectNeptune to make it FUD?

I tried FileProtector and Aegis, and both corrupt the server....no I'm not sure how folks are crypting it or making it FUD?

KissMyBlade - August 13, 2013, 7:35 pm

I just tried neptune yet. I'm checking out unknow. just to know, unknow is FUD right? thankss

rikodewa85 - August 14, 2013, 9:22 am

Even i tried Project Neptune but cannot find a way to crypt it. Even I tried Aegis but file gets corrupted..

Vigor - August 15, 2013, 12:03 am

As the proud creator of Project Neptune...

PROJECT NEPTUNE FOREVER BITCHESS!!
