Thread: [Backtracing DDoS attacks?](#)

Frederik200 - April 10, 2013, 2:58 pm

Hello HF

Currently I have an arsenal of a hundred servers with 1gbps each with intention of DDoS'ing and my question is as following;

Will the government's agencies (CIA, Mossad etc.) be able to trace DDoS attacks back to my computer (the computer is using a VPN, ofcourse) ?

The Alex - April 10, 2013, 2:59 pm

I'm not sure. I don't think so because of your VPN and because DDOS is distributed; meaning lots of people are taking part. I think anyway

Max™ - April 10, 2013, 3:00 pm

Yes check my thread posted by me , that will show you its easy to be traced even with protection

Frederik200 - April 10, 2013, 3:04 pm

The servers is'nt located where I live but in a foreign country.

?IvNet™ - April 10, 2013, 3:32 pm

DDoS is from many home computers that may be infected and force to do so. Or VPS's. There untraceable to the original source unless you look through every individual IP.

DoS is 1 person attacking. Usally a newb who found LOIC. If he has no VPN he can be easily traced back. But with VPN with no logs theres nothing u can do. Or if he's DoSing from a VPS then u have to talk to the provider and see if they can get you some IP logs.

Oh, okay.

I'm running with my own VPN (my IP is being rerouted through an external server overseas) and I'm a 100% sure that the internet provider doesn't leak. Isn't that most secure all in all?

Prostitute - April 10, 2013, 4:27 pm

no, you are retarded OP stop ddosing dumbass government sites. i doubt you have 100GBP/s worth of power

Frederik200 - April 10, 2013, 4:34 pm

Why do you think I'll DDoS government sites? The government agencies mentioned is for examples, and just to clarify that if they backtrace it, they could (or could not) backtrace it to me.

Regarding you doubting the 100gbps, ok.

?lvNet™ - April 10, 2013, 4:53 pm

<http://www.dnsleaktest.com/>

See if theres any dns leak test and make sure ur VPN keeps NO LOGS at all. Also if anything use a proxy on ur browser if ur hacking with ur browser.

Johnny Ramone - April 10, 2013, 5:21 pm

Make sure to use spoofed attacks (SSYN, SUDP, etc) on your servers and it's VERY unlikely for them to track it back to your servers, let alone your IP.

VPNs aren't perfect. If they're wiretapped or keep logs, it is 100% possible.

I suggest 2 VPNs, or a VPN and 1+ proxies.

-Hyperion - April 10, 2013, 5:22 pm

just who are you ddos'ing that the CIA would backtrace and come to your country -.-

Haseo™ - April 10, 2013, 11:06 pm

(Apr 10, 2013 05:22 PM)Azryel Wrote: [\[CITE\]](#) just who are you ddos'ing that the CIA would backtrace and come to your country -.-

Exactly the same question I'd like the answer to.

You don't need to be worried about being traced unless you are DOSing, if you are DDOSing you don't really need to worry much about that since they are from addresses away or different than your own. (unless when you send the commands and such)

Phizo - April 11, 2013, 4:06 am

I would love to see a dstat of your firepower.

If you're asking this, then you're not competent enough to personally obtain the servers you speak of.

Sonics - April 11, 2013, 4:10 am

Nice, how did you obtain the servers though?

I would launch the attack through chained cracked servers on a VPN. Don't do it on your own machine.

Frederik200 - April 11, 2013, 5:34 am

(Apr 10, 2013 05:22 PM)Azryel Wrote: [\[CITE\]](#) just who are you ddos'ing that the CIA would backtrace and come to your country -.-

Again, that was just an example. The question could also be if anyone could trace it back to me.

St4rfox - April 12, 2013, 6:26 am

Logging the DDoS attack is obviously the first step.. This can be done with any decent Protocol analyzer (TCPdump, Wireshark).

Next parse the traffic log and filter it to a list of just the IP's...

```
nmap -sU161 -vv --script=snmp-netstat -Pn -n -oN Scan.txt -iL /tmp/list.txt
```

This will tell Nmap's NSE to authenticate to SNMP using public community strings and to run a Netstat (on the actual bots/servers themselves) and it will disclose what they are remotely connected to. This way you can find the ircd/httpd server they are using.

hahahah i lol'd at you reply so much :D

-Elusive- - April 12, 2013, 1:22 pm

DDOS attacks can be traced. WTFux do it all the time.

SlightlyNuclear - May 31, 2014, 9:36 am

You definitely have no intentions of black hat activity, do you? </sarcasm>

Mr. Tycoon - May 31, 2014, 9:37 am

So you go on national television telling everyone you can hack the news channel and think it's safe to continue? The FBI or CIA are likely to be watching you.

SlightlyNuclear - May 31, 2014, 9:39 am

He must have a death wish doing something as stupid as that - what sort of retard broadcasts his activities if he clearly has blackhat intentions?!

Mr. Tycoon - May 31, 2014, 9:40 am

(May 31, 2014 09:39 AM)SlightlyNuclear Wrote: [\[CITE\]](#) He must have a death wish doing something as stupid as that - what sort of retard broadcasts his activities if he clearly has blackhat intentions?!

Exactly. I would be seriously amazed if they do not wait till he is 18 and pile every single illegal activity and get him the second he's 18.

SlightlyNuclear - May 31, 2014, 9:41 am

I'd sure hope so; he deserves everything he's going to get. I'm sure he'll plead his "innocence" though! ;)

He'd be better off pleading insanity. Because you've got to be insane to broadcast your hacking activity.

SlightlyNuclear - May 31, 2014, 9:45 am
