Thread: [Applet](#)

Johndoe27328 - April 11, 2013, 1:12 pm

I have an applet and I want you guys to tell me what I should add/improve. You see I want to get into this AP Computer Science class guaranteed. This is my final project (already finished everything else) and I know I will get 100% but I want to wow the teachers. I have a 98% in the class but I just want to be sure to get into AP Computer Science.

Project:

-Option 1

Write a program to count the number of mouse clicks on a button within a frame. (For an extra challenge, have a yes or no question on the screen and have it count the votes.)

-Option 2

Write a program that will print the position of the mouse when it is clicked within a frame. (For an extra challenge, have the mouse click event cause a change in color of the applet screen.)

-Option 3

Write a program that has three buttons, each displaying a different text that when pressed will display the text on the button in a text box. (For an extra challenge, have the user choose the color of the displayed text as well).

Applet:

Code /*

* This is Option two for this project

* It changes color when clicked and displays the location of where the mouse clicked

*/

import java.applet.*;

import java.awt.event.*;

import java.awt.*;

import javax.swing.JOptionPane;

public class Music extends Applet implements MouseListener{

 public void mouseReleased(MouseEvent le){

 //do nothing

 }

 public void mouseEntered(MouseEvent le){

 //do nothing

 }

 public void mousePressed(MouseEvent le){

 //do nothing

 }

 public void mouseExited(MouseEvent le){

 JOptionPane.showMessageDialog(null, "Mouse Exited",

 "Message", JOptionPane.PLAIN_MESSAGE);

 getMouseMotionListeners(); //warn user

 }

 public void init(){

 addMouseListener(this); //start getting mouse input

 setBackground(Color.yellow); //set background color

 }

```

public void paint(Graphics g){
    if(getBackground()==Color.yellow){
        g.drawString("Click to change color!",20,20); //tells user what to do
        Image img = getImage(getDocumentBase(), "pic.png");
        g.drawImage(img, 20, 40, this);
    }
    if(getBackground()==Color.RED){
        g.drawString("Mouse Click Position: "+getMousePosition(), 20, 20); //change text when
mouse is clicked
        Image img2 = getImage(getDocumentBase(), "pic2.png");
        g.drawImage(img2, 20, 40, this);
    }
}

public void mouseClicked(MouseEvent e){
    if(getBackground()==Color.yellow){ //only display message if it changed from yellow.
        setBackground(Color.RED);
        JOptionPane.showMessageDialog(null, "Color Changed",
            "Message", JOptionPane.INFORMATION_MESSAGE);
    }
}
}

```

Create a Label at the bottom which changes to whether or not the mouse is inside or outside the box. The pop-up window is annoying as hell.

What grade are you in?

Click position also is "Null". Might wanna look into that !

Johndoe27328 - April 11, 2013, 2:28 pm

What grade are you in? I'm in grade 12. Although I program at high university levels I think you can do a lot more to "wow" the teachers.

Click position also is "Null". Might wanna look into that !

1/2 of the time it is null other half it works. IDK what is wrong.

I am in 9th grade. ?

Thanks for the advice. ?

Bahahahahahaahah

Okay, do all of the above 3.... When I was in 9th grade it was assumed that you could do this within 3 minutes on a piece of paper....

I'm doing the same project. Do you happen to have option 1 available? I'm having so much trouble

with this project?

SIM-429621 - May 9, 2017, 10:20 am

0 "wows" will be given, maybe if you're from Kazakhstan or something and computers are rarity, so writing some bullshit Java code will make your teachers drop their jaws and masturbate to your IDE successfully running that shit.

You're asking a question to a closed account, kappa.

This is from 2013 lol

And here I was thinking that applets just became a thing somewhere in some jungle village in Cambodia after they discovered brand new browser called Internet Explorer 6. I need to start paying attention to dates.
