Thread: [Voltrex - Java Drive By Generator \(from the makers of uJDB\) \[Registration OPEN\]](#)

??s?? - April 13, 2013, 4:43 pm

Hey guys, I'm here to tell you that within 24 hours or so Voltrex, an FUD Java Drive By Generator, is going to be released. Since this is a somewhat rebuild of uJDB, most features are the same if not new and improved, such as the infection method.

Here are some features that you can look forward to seeing on Voltrex (visit: <http://schoolgradesapp.com/features.php> to view more)

Large Image ([Click to View](#))

Currently awaiting for the Thread Design & Signature Design, as well as a private offshore domain. Currently all is hosted on a domain that I have laying around, but you can still check out the site as we have features there as well.

Let me know what you think! ?

Is this free? May I have a copy in exchange for my services to create you a thread design?

Since the service is titled, "uJDB Re-Launched", what does this mean for returning customers?

what does this mean for returning customers?

I don't have time to make sure members are genuinely previous members, and end up just making a huge loophole for members to get a free membership abusing it. It's been almost a year not to mention, usually when booters go down and back up within a month customers don't get membership back (And we've all seen this happen), so I feel as if my final decision is quite just. ?

It's a new product, fresh and has nothing to do with uJDB. It is just from the creators of uJDB. :)
