Adding the script

How to use a putty booter

Web Booter

Files to download

Getting web hosting and domain

Adding files to cpanel

Changing booter info

Setting up a Putty Booter

Files to download

First you will need a program like FileZilla or WinSCP. I prefer WinSCP.

[WinSCP Download Page](#)

[FileZilla Download Page](#)

After that you will need PuTTY which is used to send a DDoS attack.

[Putty Download Page](#)

Lastly you are going to need a script. I will give 1 script which i prefer to use and i will teach you how to use it at the end of the tutorial.

[Script Download \[Mediafire\]](#)

Getting a VPS

Getting a VPS usually cost money. I will post a few websites i prefer to purchase them from below. They can cost all different prices and i will give you some of the cheapest ones i know that still work good.

You will want to buy a linux VPS. I prefer the operating system to be CentOS or Ubuntu, but you can choose what you want.

<http://www.frontrangehosting.com/index.php#openvz-tab> - Cheap and i highly recommend this website.

<https://hosthatch.com/> - Very good VPS's but cost more money

Adding the script

Once you get your VPS you should be given a root password and the IP for your vps. Once you have that open WinSCP or FileZilla. Once you have WinSCP or FileZilla fill in the textboxes with your VPS information.

[img]<http://content.screencast.com/users/LinkLance/folders/Snagit/media/2f0dc16e-6a9e-474a-be22-b41087a9f8c0/04.15.2013-20.05.png>[img]

Once logged in you will want to drag and drop ace.pl into the right side of WinSCP or FileZilla. You can rename it to a name that you will remember.

How to use a putty booter

Once the script is added you are ready to use your PuTTY booter. First open up PuTTY and fill in the info like you did in WinSCP or FileZilla.

[img]<http://content.screencast.com/users/LinkLance/folders/Snagit/media/ea1ea6ae-3ecc-4664-8b11-975477b097e4/04.15.2013-20.13.png>[img]

After you have entered your information press Open. Now that you are in PuTTY as username type in root and as password put in whatever your vps hosting company told you or what you set it to. Now you are ready to use your PuTTY booter you will have to type in one to ddos.

Code perl Ace.pl (or whatever you named the file with .pl at the end) <IP> <PORT> 10000 <TIME>
Now that you have typed that in you have learned to make and use a PuTTY booter.

Setting up a Web Booter

Files to download

Firstly you will need a booter source

I recommend this one which was leaked by [Tibit](#).

http://www.mediafire.com/download/tmtds1oq2a8i88g/Khaotic_Source.rar

Getting web hosting and domain

Web hosting a domain usually cost money and you can rarely get a domain for free but you can find hosting some places. You can get any domain you want i prefer using [Namecheap](#) to get my domain and you can also get hosting from them. Just search google for hosting and domains if you dont want to use namecheap. The good thing about namecheap is that they accept paypal and most hosting and domain companies don't.

Once you have your domain and hosting you will want to add the two nameservers that came with your hosting and link the domain to them. On your hosting there should be a tab that says Domain Name and server setup or something like that. When you click it there will be 5 slots for nameservers. In the first two enter your nameservers and leave the others blank. It can take a few minutes for the domain to become linked to the hosting.

Adding files to cpanel and setup booter

Now once you have your domain and hosting setup you will want to login to your cpanel. Your hosting should tell you how to do this. Once you are logged into your cpanel go to file manager for your domain. Once you do that you will want to make a new Winwar zip archive and add in the files from the source. For Khaotic boot source these files will be in the folder source_files. Drag and drop all of those files into the Winwar zip archive. Now you will want to upload the Winwar zip archive into file manager and extract it.

Once you have done that go back to your Cpanel home and click on MySQL Database wizard or something like that. Now you will make a database and put in information that you will remember. Once your database is created you can go back to your Cpanel home and then click on phpmyadmin. It will ask for some login info put in the full username which will be some Numbers and letter_<Name you chose>. Also put in the password that you chose. Once logged in go to databases and click on the one that you chose. Now click on import and import the file source.sql which is in the Khaotic Booter source.

Now that you have done that go to the cpanel home and go back to file manager. Now open the Includes folder and right click on db.php and click edit. Now you will want to put in all of your database information

After you have done that go to your domain and it should work.

Change booter info

Now you will have to change the booter info to yours. Firstly i would want to admin my self by creating a account on your domain and then going into PhpMyAdmin and under users you will see yourself. Change the rank to 1 which is admin 0 is for normal member. After that is done you can login to the admin panel and edit some stuff there. Next go to the includes folder in File Manager and right click init.php then click edit. Now you can edit some information in there to yours. Everything else is pretty straight forward.

If you need help you can add link.lance on skype!

I???I?? - April 15, 2013, 5:29 pm

Reserved post spot. Will add more to this later.

Thanks to [Halo.](#)

Policies - April 15, 2013, 5:31 pm

Vouch for Link Ive done this before and It worked perfectly thank you so much for the helpful tips!

?aba Yaga - April 15, 2013, 5:31 pm

Looks great , should help some people out :)

I???I?? - April 15, 2013, 5:32 pm

(Apr 15, 2013 05:31 PM)iKLUTCH Wrote: [\[CITE\]](#) Looks great , should help some people out :)
Thanks i will add the web booter and i know a lot of people need help with that.

D4zk1tty - April 15, 2013, 5:32 pm

thank you, this was a great thread, i cant wait till you add the web booter!

Ryan_Car - April 15, 2013, 5:52 pm

Good thread, - warning, your VPS may get suspended if overused.

I???I??? - April 15, 2013, 6:00 pm

(Apr 15, 2013 05:32 PM)D4zk1tty Wrote: [\[CITE\]](#) thank you, this was a great thread, i cant wait till you add the web booter!

Just typed in up quickly hope you enjoy it :D

VPN - April 16, 2013, 3:20 am

Thanks for the tutorial.. you have saved me. Going to try it now!

f00bar - April 16, 2013, 3:23 am

Looked through to setup web booter all good except you don't say anywhere how to add shells <<

VPN - April 16, 2013, 9:12 am

Where we do add the server information on Khaotic booter panel ?

I???I??? - April 16, 2013, 1:30 pm

(Apr 16, 2013 09:12 AM)Vendox Wrote: [\[CITE\]](#) Where we do add the server information on Khaotic booter panel ?

i dont quite understand what u mean please add link.lance on skype.

(?_?)Booze?(?_?) - April 16, 2013, 7:24 pm

worked for me, just need a few things for him to help me with :D

Oniloni - April 17, 2013, 8:51 am

Thanks for the share, going to try it out!

I???I??? - April 17, 2013, 5:41 pm

Thanks for all liking this tutorial will do more :D

I???I??? - April 19, 2013, 2:44 pm

This tutorial is still here!! Hope u all like it!

Hope u all are enjoying this tutorial!!

I???I??? - April 21, 2013, 6:10 am

Hope u all enjoy this tutorial :D. Post ur feedback.

jStark - April 21, 2013, 1:30 pm

I can't seem to find the source.sql file. Can someone send it to me please?

I???I??? - April 21, 2013, 1:35 pm

(Apr 21, 2013 01:30 PM)jStark Wrote: [\[CITE\]](#) I can't seem to find the source.sql file. Can someone send it to me please?

it will be int he download.. Just opne the zip

originalserv3r.exe - April 21, 2013, 1:36 pm

very nice tutorial man, definatly bookmarking this for future use!

jStark - April 21, 2013, 1:46 pm

Got it..

also, where do I update the API link?

Secondly, If I update it all to SPAM, would the booter actually work?

I???I???☿? - April 21, 2013, 1:53 pm

Your going to need API's which u can buy. its hard to do.

jStark - April 21, 2013, 1:57 pm

I've got an API. How do I add it? (I'm new to this API thing. I've got a C file and H file.. is that correct)

Whisky123 - April 22, 2013, 12:53 am

Very cool very modern very fashionable, will try. i like.

I???I???☿? - April 22, 2013, 8:20 pm

Hope that u all enjoyed this also check out my booter for a lot of power

BossCircle - April 22, 2013, 10:35 pm

Looks great. And I am definatly going to try this!

blrubin1 - May 7, 2013, 12:48 am

do you have to pay for it ok can you get it compleylt free

yarinhazan - May 25, 2013, 1:17 pm

Dude, how do I Mosich attacks? What if what he attacks the shells or dedicated server / VPS? If VPS How do I add a site?

Dealer - May 25, 2013, 1:28 pm

Good thread, your VPS may get suspended if overused.

jeroenb5011 - May 26, 2013, 9:03 am

is a vps needed is there now way doing it witout it??

I???I???☿? - May 27, 2013, 12:10 pm

For a shell booter you will need vps

ofek123ofek - May 29, 2013, 2:02 am

i did the tut and my server is crash :(i cont re cconnect him i try to attack some one and the server is dead now :(

Fly By Night - May 29, 2013, 2:33 am

(May 27, 2013 12:10 PM)I???I???☿? Wrote: [\[CITE\]](#) For a shell booter you will need vpsNo you don't, I'm running a shell booter on a free web host and it hit's .7GBPS

I???I???☿? - May 29, 2013, 6:03 pm

I meant a putty booter shit lemme chane thread

I???I???☿? - June 16, 2013, 9:35 am

I won't be able to help u on Skype. Summer!

I???I??? - July 9, 2013, 4:03 pm

Haven't brand this to the top in a while :). Anyways I don't want to help on Skype anymore too many people are messaging me

I???I??? - July 15, 2013, 9:30 am

tezcan34 - July 16, 2013, 4:22 am

Looks great. And I am definately going to try this!

Agfx - July 16, 2013, 5:02 pm

The link you have given for the source Tibit "leaked" is gone.

I???I??? - July 16, 2013, 5:30 pm

(Jul 16, 2013 05:02 PM)Agfx Wrote: [\[CITE\]](#) The link you have given for the source Tibit "leaked" is gone.

Link updated to http://www.mediafire.com/download/tmtds1oq2a8i88g/Khaotic_Source.rar

swagster - July 16, 2013, 5:38 pm

Thanks for the tutorial i'll get the 10gbps when i get the money and I'll share with you cuz you showed me the EPIC site:3

cogumelohat - July 21, 2013, 11:46 am

Looked through to setup web booter all good except you don't say anywhere how to add shells <<

I???I??? - July 21, 2013, 1:02 pm

(Jul 21, 2013 11:46 AM)cogumelohat Wrote: [\[CITE\]](#) Looked through to setup web booter all good except you don't say anywhere how to add shells <<

That is because u can't add shells. U can add Apis

Violators - July 21, 2013, 1:35 pm

(Jul 21, 2013 11:46 AM)cogumelohat Wrote: [\[CITE\]](#) Looked through to setup web booter all good except you don't say anywhere how to add shells <<

That would be a shell booter. I'm not too sure about putty booters, but if I am correct, they run off scripts. Not sure though.

Zombiez™ - July 21, 2013, 9:08 pm

Vouch for Link Ive done this before and It worked perfectly thank you so much for the helpful tips!

Fly By Night - July 21, 2013, 9:15 pm

Khaotic Booter wasn't leaked, It was posted as a free script by the owners of the script. With that aside, Great tutorial Link.

phantomkick - July 25, 2013, 11:55 am

Great TUT thank you for the post. Worked perfectly!

Olof - July 25, 2013, 12:38 pm

Thanks for making this tutorial. I'll test this out

kingzmik123 - July 25, 2013, 2:51 pm

do you help me for setup a booter plz men contact me on msn mikaelbeaulieu13@live.fr thanks :)

BlaBlah101 - July 25, 2013, 4:28 pm

It's a good booter but i can't boot anyone because you can't even add shells...

Would prefer a web-based booter that's actually possible to run shells on and what not.

kingzmik123 - July 26, 2013, 5:22 am

what is my error ??? help me plz Parse error: syntax error, unexpected T_STRING in /hosted/subs/com.net.sc/t/e/teamkingz/public_html/Source/includes/db.php on line 3

IceTimux - August 27, 2013, 3:59 pm

Thanks BRO very nice stuff you have here wonderful share

?Genocide(X) - October 14, 2013, 3:27 am

What exactly do you edit in the init.php and how do you add a api to the vps?

The Supreme Gentleman - November 23, 2013, 5:03 pm

HELP I get this error. I changed the part where it says my username and password so I don't get hacked.

Fatal error: Uncaught exception 'PDOException' with message 'SQLSTATE[28000] [1045] Access denied for user 'user'@'10.1.2.31' (using password: YES)' in /home/u912949166/public_html/Khaotic Source/includes/db.php:7 Stack trace: #0 /home/u912949166/public_html/Khaotic Source/includes/db.php(7): PDO->__construct('mysql:host=mysql...', 'user', 'password') #1 /home/u912949166/public_html/Khaotic Source/index.php(3): require_once('/home/u91294916...') #2 {main} thrown in /home/u912949166/public_html/Khaotic Source/includes/db.php on line 7

MY ACCOUNT WAS SUSPENDED THE NEXT DAY.Send them an email or ask for a refund they will give u back the vps. Just dont ddos from it anymore.

The Supreme Gentleman - November 25, 2013, 12:52 pm

(Nov 23, 2013 08:36 PM)I???I??? Wrote: [\[CITE\]](#) Check line 45 on login.php see if theres anything u notice wrong

I don't see anything wrong. This is my line 45:

```
$SQLCheckLogin -> execute(array(':username' => $username, ':password' => SHA1($password)));
```

Also if I try to register I get an error on line 42 of register.php

Here is my line 42:

```
$checkUsername = $odb -> prepare("SELECT COUNT(*) FROM `users` WHERE `username` = :username");
```

I???I???? - November 25, 2013, 1:01 pm

Well it has to be something with ur database :/

?ain - November 25, 2013, 1:43 pm

About how hard do these hit? And which is better?

traczthefox - November 28, 2013, 11:12 pm

wow nice. tut ill have to do one later when im fully awake

I???I???? - November 29, 2013, 7:17 am

(Nov 25, 2013 02:43 PM)G0dOf4ll Wrote: [\[CITE\]](#) About how hard do these hit? And which is better? If you have a good script and a amp list a Vps could be better

Jeremy Clarkson - November 29, 2013, 11:41 pm

Right i got this setup but doesn't hit. I tested on myself and i didn't even lag, is there anything additional i need to do? Any suggestions i have setup on a web based server with a 1gbs line

I???I???? - November 30, 2013, 2:31 pm

(Nov 30, 2013 12:41 AM)thetechfather Wrote: [\[CITE\]](#) Right i got this setup but doesn't hit. I tested on myself and i didn't even lag, is there anything additional i need to do? Any suggestions i have setup on a web based server with a 1gbs lineYes of course you need to add an API to it.

(Nov 30, 2013 03:31 PM)I???I??? Wrote: [\[CITE\]](#) Yes of course you need to add an API to it. Okay thanks for the help, can you point me in the right direction for an api please?

Autograph - November 30, 2013, 5:24 pm

Great tutorial. I'm still a bit fuzzy on adding servers/shells.

yobyobx - November 30, 2013, 6:29 pm

Very cool very modern very fashionable, will try. i like.

mecoda42 - December 1, 2013, 3:40 am

I hope this will work for me i gona try it out!!

dunkyou11 - December 9, 2013, 6:17 pm

just bought a server seems like it could hit ok.... but idk

NegativeGamer - December 9, 2013, 6:46 pm

thanks man been looking for a decent web booter source!

xvipercodes - January 24, 2016, 6:49 pm

what version of CentOS? Need a reply ASAP...

Theres CentOS 5,6,and 7 and each one has 32 bit or 64 bit

criminalagency - July 1, 2016, 7:32 am

Huh, pretty impressive. A very well thought out booter file. Even uses PDO for database connections, so no chances of SQL Injection there. Nice! Thanks. Do you know if there is a ticket system though?

sabur - July 1, 2016, 7:39 am

nice tutorial man, thanks for it.
