Thread: [HOW TO GET LINK FOR ALL VALID PAGES ON A WEBSITE?](#)

TURKINATOR - April 16, 2013, 8:04 pm

lets say the website was hackforums.net , i want to find all the pages that would be hackforums.net/*****.php etc etc , any tool to do this really quickly? thanks , help will be appreciated

Toasties - April 16, 2013, 10:46 pm

google site:hackforums.net/
look at results

acunetix web vulnerability scanner - note this is shit, just use for the dir

well if you are not bothered to learn anything, i think you should not even try.... seriously. the more information you know the better.
knowledge is power.

Knowledge is nothing without wisdom.

OP: What you're trying to do is called Crawling.

You could use Wget with this simple command:

Code wget -mirror http://www.site.com/You could of course use more variables, just look up the manual for Wget.
