Tenaxiums RAT Remover

With the growing threat of RATS getting in to your system you need a light weight simple tool that will tell you if you are infected. %100 Guaranteed. No RAT can protect from Tenaxiums method of detection and deleting RAT software.

Now remember, this does NOT substitute for a antivirus. It is a simple tool that DOES NOT even scan files, people need to relies that many RATS are FUD, scanning then scanning WILL NOT help.

Im not afraid to share what this tool does, because before you run anything you should always know what it does. This tool simply scans the computers connected to yours. Its that simple. If it finds anything suspicious it will tie the suspicious connection to a program you have or have not download with your consent. It will prompt you with the file and a Y/N answer to delete it or not. Its simple huh?

With a program like this their is bound to be false positives, Something like uTorrent for example, if your sharing files, your connected to other computers. Another example of this is Spotify. You can saftly ignore this.

So all that's left is the GUI. To be completely honest im not a GUI person and the GUI sucks. Now to all the skids that cant read a post before downloading a tool the next line message is for you..

==--==--

IF YOU ARE NOT INFECTED IT WILL IMMEDIATLY CLOSE AND NOT PROMT YOU WITH ANYTHING!!!

==--==--

That's just the way this program works, sorry.

This is very good if it works. I have a feeling I might be RATED.
Will wait for some comments first though.

The Conjurer - April 18, 2013, 1:02 pm

You only have 18 posts and it just seems sketchy to me. I'm uploading it to Anubis to get a scan; will post the results when I get them.

Yes, I know, however we just need to be sure your not just some new guy trying to infect us. Many people is like that. I'm sure you understand.

Im gone brah - April 18, 2013, 1:06 pm

I will wait until conjurer, tells us if this is legit. Your new.

Btw upload it to Virustotal instead, it got a bigger av list ;)

booby - April 18, 2013, 1:10 pm

It seems clean to me, however I would run this in sandboxie first.

My internet is awful. The anubis scan is taking ages; I'm going to close the tab. You can scan this file on anubis if you want, but if this user says it's safe, then it's safe.

Vouch.

As he said, it closed upon opening just to check and see if i had a RAT. Just to be sure, i will be using other anti-RAT programs that are out there, but this is something ill be using. Thanks so much!

My pc is clean from RAT's.

Thanks bro.

3nterman234 - July 7, 2013, 1:28 am

I tried this... and it works. It found my RAT, and deleted it, but my RAT has two parts, and if one of it gets deleted, its still functional. So... 5/10 because RAT is still functional upon computer restart.

Only false positive is Dropbox, so very good! :)
