Thread: [\[IRC\] Looking for IRC Bot Sources](#)

Cytoplasm - April 18, 2013, 10:29 pm

Looking for some IRC Bot Sources, doesn't matter what bot it is.
Vanadium would be nice, or nGR

There used to be a 300+ bot source download, but unfortunately that link is down :(
^ if anyone has the 300 that would be awesome...

Please help me out!
Thanks,

Cytoplasm

Brosephz - April 18, 2013, 10:44 pm

Both dogshit bots, why can't you just spend a little money on one, they're still pretty shit but better than anything you'll receive for nothing by far.

Cytoplasm - April 18, 2013, 11:22 pm

Link to a premium irc bot source? An up to date one plx

Brosephz - April 18, 2013, 11:37 pm

Barracuda / Insomnia

The only two I know of on here because IRC bots are pretty shit and it's not 2008.

tux1 - April 19, 2013, 4:59 am

Even though most of the open source irc bots are old, they are still work and are a lot better than the .NET shit you get around here.

@ the comment above: I don't know why you would say barracuda or insomnia. Barracuda is a piece of shit, it's easy to remove and the panel is easily hacked. I heard that the owner is also a scammer and has stopped supporting it. Insomnia is coded in c# so you need the .NET framework to run it, there's no injection and it's also incredibly easy to decompile.

Energion - April 19, 2013, 5:02 am

I have IRC bot Source code ,
but its priv8 :/

Panoptic - April 19, 2013, 9:32 am

You misunderstood the ENTIRE concept of my original post. ?

But on that subject.. so what if it's .Net? Insomnia is a stable ass bot and worth that money all day long, the issue is finding a good C# crypt.

Cytoplasm - April 19, 2013, 9:40 am

Damnit.. I just need an IRC Source.

Please Jesus someone just post a DL link ><

^Safe ofc.

Panoptic - April 19, 2013, 9:43 am

Just search Google for a fucking "Aspergillus IRC bot base". It's a public and well known base. Learn to find things yourself instead of having them spoonfed to you.

@Cryp1c I wouldn't say that Insomnia is a stable ass bot, as tux said there is no injection and it is just a very simple bot with no features that make it worth the money.

Fernandez - April 19, 2013, 1:50 pm

(Apr 19, 2013 09:34 AM)Cryp1c Wrote: [\[CITE\]](#) But on that subject.. so what if it's .Net? Insomnia is a stable ass bot and worth that money all day long, the issue is finding a good C# crypt.

Goddamn you are retarded.

.NET should not be used in malware coding. Why? Because there's a HUGE compatibility issue with both .NET malware and crypters. It's hard to estimate how much % of the world's computers have any version of .NET installed, and even harder which ones have the latest. .NET Framework is not installed by default on any Windows version, so the real numbers will be low. It's discouraged to be used for any software development that is distributed to other people. Please get this into your stupid HF skiddy head.

And if you have a .NET executable, you don't need to use a C# or .NET crypter provided the bot/exe is coded properly.

Panoptic - April 19, 2013, 1:57 pm

Fernandez is right, non-dependancy crypters are compatible with .net malware, but .net crypters are not compatible with non-dependancy malware.

Fernandez - April 19, 2013, 2:47 pm

(Apr 19, 2013 01:57 PM)Panoptic Wrote: [\[CITE\]](#) Fernandez is right, non-dependancy crypters are compatible with .net malware, but .net crypters are not compatible with non-dependancy malware.

I didn't say that. .NET crypters are compatible with anything, the drawback is still that their .NET and won't run on half of the world's PC's but they are compatible with any bloody executable no matter

what the coding language is. Same vice versa.

Panoptic - April 19, 2013, 3:34 pm

I have heard of many problems using .NET crypters on bots coded in c/c++. IDK if its just the bots but many are corrupted by .NET crypters.

_Stoner - April 19, 2013, 3:39 pm

Who in the right mind would code mass distributed software(even legitimate) with third party dependencies? That is why .NET is bad for malware. It works fine crypted if the crypter is made properly. But why would you have third party dependencies when you can create software in entirely native programming languages?

Rubber - April 19, 2013, 3:44 pm

<https://hackforums.net/showthread.php?tid=190418>

It was a quick search.

Photo. - April 19, 2013, 3:46 pm

As already said.

Go buy a premium one, public one's are shit.

Fernandez - April 19, 2013, 4:11 pm

The programming language of .exe doesn't make any difference to compatibility of a crypter written in a different language. If something is incompatible/crashes when using certain crypters it only indicates that either the bot or the crypter is coded like shit.

(Apr 19, 2013 03:39 PM)_Stoner Wrote: [\[CITE\]](#) Who in the right mind would code mass distributed software(even legitimate) with third party dependencies? That is why .NET is bad for malware. Exactly, it's amazing how many people don't realize the problem with using .NET on this forum.

And then there's the likes of Crypt1c who support usage of .NET in malware because they are noobs and can't code anything in a proper language.

Cytoplasm - April 19, 2013, 7:22 pm

This has gotten way off topic, WTB more links.

Thanks :)

sonrise - April 19, 2013, 11:42 pm

I have like 70 bots in a rar somewhere between my computer and my servers.

I will try to upload some if I can find it (my upload speeds are just really bad)

Cytoplasm - April 20, 2013, 9:57 am

I would be very much appreciative if you did this Sonrise :-)!

Thanks bro

MrPip - April 20, 2013, 6:44 pm

I can give you a bin of a good bot. Shoot me a PM ! Would fetch in a free crypt also.

Nice fucking gravedig, pretty sure he has found what he was looking for.

KarNak - May 17, 2013, 3:18 pm

Why not just ask mom for a shit load of funds and get you self a coder to do you a clean/recoded version of zeus with some shit u want on it ;) Just an idea ;) xxx

@Cryp1c I wouldn't say that Insomnia is a stable ass bot, as tux said there is no injection and it is just a very simple bot with no features that make it wort the money.

Tried insomnia myself and have to agree that it is a very simple bot. The botkill feature on it is terrible as well. Not an opinion. That's a fact.

SN 1006 - May 17, 2013, 3:36 pm

Way to grave dig the thread people, but anyways.

Only use source codes to make your own bot, better. Never copy source codes. But anyways, hope the OP has a good time having this grave diggen over and over.

Fernandez - May 17, 2013, 3:56 pm

Lol... how many times is this thread gonna get gravedug?

its just a generic asper mod the "author" threw together to make a quick buck

ovelaye - May 17, 2013, 4:35 pm

isn't everyone complaining about the grave digger doing the same thing..
sh*t now i did it

and if your looking for old bot sources try here

<http://repo.meh.or.id/bootnets/>

Cytoplasm - June 21, 2015, 8:42 am

Thanks everyone :-), been a great help!

illuzionzsquad98 - November 27, 2015, 2:58 pm

I have a LA Private Exploit and 7 ALready list never been Scan. Asking for \$100

Naggzy - January 17, 2016, 7:24 pm

Hey ppl, didn't want to open a new thread just for this, but I have a question. I made an irc bot and now I want to make it able to „ping" a channel. What I mean, is to make it do what mIRC does when you type <[/PING> in the main channel. This makes the window flash in Windows so everyone just like when you get a pm. What command to use for this? PING obviously doesn't do it, and I've even tried it, but nothing happens. Thanks

Finity - January 18, 2016, 8:13 am
