Thread: [\[TUT\]How to setup Cybergate RAT \(download link included\)\[TUT\]](#)

**Cyber Terrorist** - March 30, 2010, 7:35 pm

[warn]

No-IP (step one)

Spoiler [\(Click to View\)](#)

download no-ip DUC [here](#)

start by going to no-ip.com

Register and everything. after u register, go to add a host.

Name the host whatever you want, on the field next to it, scroll and select no-ip.biz otherwise it will not work. skip everything else and add your host.

Now open the no-ip DUC you downloaded, sign up and wait for ur hosts to appear. when they appear click the check box. there will be text at the bottom saying it has been updated. You are done with the no-ip. Moving on...

The RAT (step 2)

Spoiler [\(Click to View\)](#)

go to Control Center, Click start

Start the RAT. Go to Control Center>options>Select Listening Ports

Start by deleting any active ports. Write 82 on the blank then click the arrow. For connections limit leave it as it is. For the connection password write your No-IP login password or it will not work! Click save.

go to control center>Builder>create server

delete what is there then click new. Name it whatever u want. Click on the user to highlight it then an arrow should appear on the bottom right, click on it. you should be on connections

Delete all ports and all DNA hosts. Then click add.

write this in: yourhostname.no-ip.biz:82

make sure the :82 is in there.

for the identification write in your no-ip user name (your e-mail)

for the password write your no-ip password.

Now move on to installation.

Make sure the check box marked Install server is checked at the top left.

For installation directory click on system.

for inject into click on default browser.

for boot have everything checked (dont write anything)

all the way at the bottom click random 5 times for both buttons.

for the checkboxes at the right have only the first three checked.

skip message

skip keylogger

for anti-debug have everything checked.

now move on to create server.

Make all boxes unchecked then click on create server.  
Put the server wherever u wish. save settings: Yes

Now, go back to Control Center and click on DNS console

Put ur no-ip username and password.  
click Auto-Detect for the IP address.  
set No-IP as your DNS provider then click update at the bottom.

CONGRATULATIONS, YOU HAVE SUCCESSFULLY SET UP YOUR RAT!!

to test it, run it on yourself and you should be your first victim. Try messing with the options by right-clicking on the victim, dont do anything dangerous because the first victim is you.

To spread your server send it to anyone you like, when they run it you should get your second victim.

Some anti-viruses might pick up the server as a virus, download a crypter to make it FUD (fully undetectable)

If you have any questions don't be afraid to PM me.

**662xChase** - March 30, 2010, 8:59 pm

Dont forget to encrypt it because most antiviruses should pick it up so unless you know they dont have one other than that good job for your first tut

**peek** - March 30, 2010, 9:00 pm

Just a suggestion you should put some pictures up of what your doing it helps a lot. Good tut though, but some are better on this site.

**Big.Eye** - March 30, 2010, 9:28 pm

Ty man i just used and set up my rat. TY

**jkpraleon** - March 30, 2010, 9:36 pm

Thank you, this got me going as well. Meant to say it last night but totally forgot.

**Leet15** - April 6, 2010, 1:44 pm

I dont see a no-ip.biz..

**-mothered-** - April 6, 2010, 2:29 pm

Agreed with peek, some screenshots would've been of greater assistance In following your tut. Nonetheless, not too bad at all.

**Jackal King** - April 6, 2010, 4:57 pm

Wow, awesome tut. I really needed this, too. I couldn't test out the server due to av problems, but I hope it works (it should, i followed everything to the T) Thanks again!?

**blksith0** - April 6, 2010, 5:08 pm

Meh, okay tutorial, if you like colored blocks of text.

**NXRyuKenXN** - April 18, 2010, 5:29 pm

good tut, but for some reason nothing shows up for me under the main screen, I have sent it to a

few friends to test it but it didn't work, I tried it on a virtual machine also, I'm positive I properly port forwarded and I have my no-ip host and No-IP DUC running yet I still can't get it to work D: any help (AT ALL) will be very appreciated

**el pollo grande** - April 18, 2010, 5:39 pm

Yeah thanks for the tutorial just put em with the other 20 cybergate tutorials.

**Trentizback** - February 2, 2011, 9:05 pm

does it work on windows 7 because whenever i try to download it and extract cybergate always disapears does this work on windows 7

**carl020989** - February 6, 2011, 11:38 pm

I'm running it on windows 7 ultimate, the only problem I'm having is the slaves showing up. I set it up exactly as the tut says and i have the DUC running. I'm testing it on myself nothing updated. :(

**carl020989** - February 8, 2011, 3:13 am

Well, I do not know if it's me or not but, I cannot seem to get my VM to show up as a slave... I got VMware and I installed windows 7 on it and ran my server. Nothing happened on cybergate client. I followed the instructions step by step. I read them first before doing them then I read them as I was doing them, I forwarded port 82. I also tried port 3828, same thing. Before I chose to use cybergate, I was testing out Dark comet. I kept getting this message "MYHOSTNAME.no-ip.biz did not successfully connect to port ####"

(#### = the multiple ports I tried after forwarding them) So, If anyone can help me out, I would appreciate it greatly. Just send a PM. Thanks!

**iHaCk3R** - February 8, 2011, 3:14 am

very good tutorial Hope to see more

**Elvcandor** - February 9, 2011, 5:13 pm

i love you, no homo

great help indeed

**luigi90210** - February 9, 2011, 7:26 pm

nice tutorial

really helped me out

**Rockwings00** - February 10, 2011, 4:16 pm

Pretty good tut. It's sure to help out some noobs.?

**iSynergy** - February 10, 2011, 9:55 pm

Time for me to Try!!!, i used to keep getting Fail Conections even though there was none, if you try on yourself wat would happen? XD?

**cmaster1988** - February 15, 2011, 1:18 pm

Ty for good info, made mistake by not using the same info from "no-ip" and the CyberGate setup :)

**Chris Versaci** - February 18, 2011, 10:08 pm

More pictures would be nice. Other than that it's good :).

**dark satin96** - February 19, 2011, 12:30 pm

ive followed it step by step and and it didnt work is it because i have windows 7 ?

**NewbieHacka** - February 19, 2011, 4:06 pm

very nice tutorial bro just try to put some more pics in it make it more eye popping.

**DevTagS** - March 13, 2011, 6:43 am

Indeed more pics and it will be perfect

**wimpie2001** - March 15, 2011, 12:36 am

looks great, this is just what i needed :p

**uglykidjoes** - March 15, 2011, 2:13 pm

nice tut , first time rat user here and ive set it up right and everything went well and ive clicked to test on me but nothings showing up in control centre, aint i ment to be there as a slave?

not sure if this is relivent but at bottom it says waiting for connection to port(s) 82 ... has been for ten mins now

**shahxzinen** - April 18, 2011, 3:20 am

i want cybergates softwarem,, this is my yahoo ID ,, shahxzinen@yahoo.com

**Dmcboying** - April 18, 2011, 9:47 am

Eeh?

YOU NEED TO PORTFORWARD?

You need to porward the port 82 to your router first,  
if you need help with that.

PM me if you want ;)

**Mogo** - April 18, 2011, 12:00 pm

Should I connect to a VPN before using this so I don't get caught?

Also, should I disable my network shield? (using Avast)

**Dmcboying** - April 20, 2011, 12:57 am

(Apr 18, 2011 12:00 PM)Mogo Wrote: [\[CITE\]](#) Should I connect to a VPN before using this so I don't get caught?

Also, should I disable my network shield? (using Avast)

Yeah, thats the best.

@ Disable your network shield.

**Airwalker** - May 11, 2011, 12:58 pm

I'm having the same problem as some others here... I don't see my server on the main menu.. :( help?

**masterbrain** - May 12, 2011, 6:17 am

THANKS I LOVE YOU SOO MUCH

PS: i am not gay

**psvoleole** - May 13, 2011, 10:37 am

i don't see control center can you say me wher it is?

**psvoleole** - May 15, 2011, 3:08 am

nice works great for me (i have windows 7)

thx

**jam0rz** - May 19, 2011, 3:51 am

nice tutorial man, i will try!

**BigLad** - May 25, 2011, 10:45 pm

when i open the server it doesnt make me a slave it just does nothing

**iToKe** - May 26, 2011, 11:05 am

Great tut, now if only I could find the DUC in my folders.. D:

**khalisor** - June 18, 2011, 9:35 pm

follow this tut. its finally working!...a big thnx!

**magemaniac33** - June 18, 2011, 11:11 pm

I'm getting an invalid user name for DNS Console O.o "[2:07:52 AM] Error : Invalid username

[2:07:53 AM] Error : Invalid username

[2:07:54 AM] Error : Invalid username

[2:08:06 AM] Error : Invalid username

[2:08:12 AM] Error : Invalid username

[2:08:20 AM] Error : Invalid username

[2:08:21 AM] Error : Invalid username

[2:08:21 AM] Error : Invalid username

[2:08:32 AM] Error : Invalid username

[2:08:45 AM] Error : Invalid username"

I put my \*.no-ip.biz and my password host name the same thing but without the ".no-ip.biz" and redirecting to my home ipadress...

**AzzidReign** - June 19, 2011, 1:55 am

I need a little help, I did everything, but oddly can't seem to find the server. Its supposed to be in my docs but its not...Help??

**craig.hamilton1994** - June 23, 2011, 1:16 pm

After i registered at no-ip.com i opened the No-IP DUC and signed in ok. The problem is that the host i added on the website is not coming up on on the No-IP DUC application. Can you help me please :S

**Inso** - June 24, 2011, 12:40 pm

I've done everything listed.

I've tried to make myself a slave, but in the program, I can't see myself. Just blank, and at the bottom it says:

Quote:Waiting for connection on ports: (82)

Do I need to forward my port 82? And if so, can I please have some help in this?

**christaphaa** - June 24, 2011, 11:47 pm

thanks this helped alot man.

**umair344** - June 28, 2011, 6:52 am

nice tutorial helped me a lot .. plz recommend me some good crypter too

**craig.hamilton1994** - June 30, 2011, 4:43 pm

Really good tut thank you. It helped me soo much!

**craig.hamilton1994** - June 30, 2011, 4:43 pm

Really good tut thank you. It helped me soo much!

**dj1471** - July 1, 2011, 6:14 am

i also seem to be slightly stuck with this installation any help would be greatly appreciated , i get a message in DNS that

" is not a integer value

But there is no " anywhere in the User name or password or in the no-ip

**thejsunna** - July 1, 2011, 6:43 am

great Tut...nice and simple for beginners :) 9:43

**m3llomatt82** - July 3, 2011, 5:57 am

NEVER EVER RUN THE SLAVE ON YOURSELF! Only run the slave on yourself if you do it in sandboxie, <http://www.sandboxie.com/> . Nothing against Cyber Terrorist. I believe most if not all copies of CG have a leech attached to the created server. When you send your server to a vic, their server gets loaded at the same time. They pick out the out your prime vics and leave you with the rest.

**://PhaZe** - July 21, 2011, 10:10 am

This is the most understandable cybergate tutorial ive looked at xD great job, and ty :P

**[KiLLeR]Hussen** - July 21, 2011, 10:15 am

aweosme for noobs :D , keep up the good work :)

**sh00t3r** - July 21, 2011, 12:32 pm

the file size seems kinda weird

1846kb?

**kennydragon** - August 6, 2011, 9:42 pm

Ugghhh what do i put at "Host Name" (found in "DNS Console").... for now i just puted mine (myhostname.no-ip.biz)

i already tried with the one that was already there and it just said the following message "[00:39:23] Error : Hostname supplied does not exist"

**Rammstein** - August 7, 2011, 8:52 pm

worm in there scanned w/ avg

**Gongoozle** - August 7, 2011, 11:22 pm

Thank you very much this helped! :D Thank you very much this helped! :D

**Rated®** - August 21, 2011, 11:07 am

please someone reply: everytime someone restarts there computer and sign back in there not on my list no more also i got a message saying put them on your start up application's list if you know where thats located private message me or reply

**TagJackers** - September 4, 2011, 11:58 pm

Very Trusted User Link And Tutorial Works 100%

**dark satin96** - September 12, 2011, 2:46 pm

so why does my server get deleted every time i run it do you know ???

**splintercell44** - September 13, 2011, 10:27 pm

You cant be serious... I have never had to enter in my no-ip address and password upon any cybergate server I have ever built.. I don't understand why anyone would do this because the password is only necessary to connect from server to client the no-ip information is separate and apart of the rout of connection only. am I wrong anyone?..

**spykids007** - October 2, 2011, 8:15 am

thanks for the guide it really helped

**iamveryveryverygay** - October 6, 2011, 6:22 pm

(Mar 30, 2010 09:36 PM)jkpraleon Wrote: [\[CITE\]](#) Thank you, this got me going as well. Meant to say it last night but totally forgot.it doesn't have to be no-ip.biz it can be anything

**sorenm** - October 7, 2011, 5:26 am

hi all

I'm new here and have a few questions:

1. I used cybergate to create a hack file, now I see on that people say thah BLACKSHADES is the best RAT available, can some one tell me what's the advantages of blackshades over cybergate? and where can I purchase blackshades?

2. there are many remote control programs on the market today like: spyanywhere, realtime spy etc'. Those programs are commercial and detected by antiviruses, is it possible to crypte these programs?

and if some one sells blackshades and a fud long lasting crypter please contact me by PM, here or by mail  
thanks alot!!

email: oren1211[at]yahoo.com

**teme`** - October 14, 2011, 2:55 am

when i install no-ip file my virus protection says its virus and i cant open that file :( help ?

**gummyboy** - October 21, 2011, 8:01 am

thanks mate, awesome tutorial. very helpful

**G.O.O.G.L.E** - October 22, 2011, 7:32 pm

Thanks Man! Very Easy Step By Step Tutorial!

**Heroicis** - October 23, 2011, 6:04 pm

Mind posting link from direct source or a virus scan?

**The Social Experiment** - October 25, 2011, 4:04 am

My server.exe, when ran, just comes up with the sand timer and nothing happens. I don't come up as a slave on CyberGate either. Any ideas?

EDIT: Sorted, instead of doing it through No-Ip, I went with a good old VPN (proXPN) and it's working great. Working on getting my first slave.

**James Wrecks** - October 25, 2011, 7:15 pm

i need major help with RATS,it never finds any slaves for me,not even myself

**Dracula1** - October 29, 2011, 2:35 pm

Hi, I have cybergate and made a server with chrome password option enabled, uploaded a .dll to free webhosting, but now? Do I get mails in my webhosting box?, or do I miss an option in cybergate to view directly. Because from the keylogger I can see the passwords, but there is no need for a .dll. What does the .dll do. what ccybergate without this option can't.

TFYT

**flexian001** - November 15, 2011, 8:03 am

nice nice , but you forgot to mention that you also have to make a new host under the section free host names with whatever name you would like and then should the dns console fully be updated succesfull

**Saucy** - November 20, 2011, 6:11 pm

<https://hackforums.net/member.php?action=profile&uid=946680>

**toon** - November 28, 2011, 4:11 am

ok ive done everything right but when i sent it to myself on my other computer noting showed up. so if anyone could help me with this plz send me a message

**VZ3R** - November 29, 2011, 8:07 am

You guys are using an extremely outdated version on an extremely old post.

Please refer to newer threads and tutorials!

He speaks the truth, that is why I haven't been responding to any of your PM's.

Besides, I realized that RATs get boring eventually. It's the same thing every time.

**chrisinho** - December 4, 2011, 5:08 am

Really nice tutorial, helped me a lot, thank you!!

**outlawnigga** - December 9, 2011, 11:50 am

ok i have one question,what am i suppose to do with this,how do i send it to someone,idk,what im doing wrong i need help

**hemant1307** - December 10, 2011, 4:47 pm

Nice share thanks bro and also please tell me which rat is the best to use for linux, mac and windows aswell. This is one of the most understandable cybergate tutorial ive looked at great job

**Largest** - December 11, 2011, 1:43 am

thank you so much bro :P... you helped quite a bit

OK but could you please post a link to newest CG if you have ?

**darkside8686** - December 30, 2011, 2:50 pm

Great tutorial, really useful. Thanks!

**Bennis** - January 1, 2012, 10:59 am

Simple but useful guide. Nice share :)

**Quizzical** - January 1, 2012, 12:19 pm

Ty so much, this helped me get the rat working

**taz2890** - January 22, 2012, 6:54 am

Cyber Terrorist, I went through all of you steps and I keep getting a messages that says: the dialog box has the red x and the name of dialog box is svchost.exe. The message reads the program can't start because missing mozsqlite 3.dll "which sounds like a bogus file" from computer try reinstalling to fix the problem. I tried several time to delete and reinstall but I get the same message. Do you think someone is on my machine??

Taz2890[/b]

**DisasterZany** - January 22, 2012, 8:30 am

Hey man I did everything you said but nothing happens. I created a server for my own but when I open it nothing happens. What do I wrong?

**andrejsed** - January 22, 2012, 1:29 pm

Thank you very much this helped! :D?

**ViR0** - February 1, 2012, 12:53 pm

It won't work for me... Can you please help me, i port forwarded and everything.... (it says it's open)

**addono** - February 4, 2012, 4:01 am

**dishnitup** - February 8, 2012, 1:12 am

Uh-oh, after i selected listen ports, cybergate seems to have frozen up on me. Suggestions?

**xPoverty** - February 8, 2012, 8:01 am

any1 knows where is the download link ?

**dishnitup** - February 8, 2012, 9:11 am

(Feb 8, 2012 09:01 AM)xPoverty Wrote: [\[CITE\]](#) any1 knows where is the download link ?  
It's in the very first post. It says something like, get it here.

**LearnMeToHack** - February 26, 2012, 5:46 am

Thanks for the tutorial very nice and good luck

**ARABIAN1** - February 26, 2012, 4:32 pm

i need help setting it up. can someone help me throught teamviewer?

**stirfry95** - February 26, 2012, 4:51 pm

Awesome TuT man! For some reason I can't run it on my own computer to test it out tho :( Any clue on how to fix this issue? Thanks for the TuT and thanks in advance for any help :)

**HTShadow** - February 28, 2012, 8:29 am

Good tutorial, helped me set my first server up

**CasperGhost1993** - April 1, 2012, 11:57 am

i need help with cybergate. im having trouble.. when i send my server to my vitim (friend is testing for me) when they open they get a black screen... im sending before encrypting to see if it works and have also tryed sending crypted version, both of which have the same results. im sure im fuckin up sumwhere.. if sum1 could help me find the problem it wold be greatly appreciated. id like to communicate through email at casperghost1993@yahoo.com.. or any other type of communication, please email me at this adress first because its the thing i check most.

**indeep100** - April 4, 2012, 1:26 am

ezut is ki próbáltam de nem lett jo valaki segitsen

**F4mOuS** - April 22, 2012, 12:39 pm

Hello, do you crypt to any for free??

**abdi8270** - July 4, 2012, 2:47 am

Nice 1 u helped me a lot but i can't use the rat on my own pc

**Windz12345** - July 6, 2012, 10:55 am

it says error host name dosent exiest when i followed all steps.

**PosionAvy** - August 12, 2012, 8:37 am

when i start my server.exe it shows following errors :

mozglue.dll

nspr4.dll

plc4.fll

mozsqlite3.dll

nssutil3.dll

missing.

i even tired reinstalling and restarting. What do i do?

**xmailmanx** - August 12, 2012, 3:59 pm

Hey thank you a lot, great TuT dude ?

**Arbatix** - August 13, 2012, 2:00 pm

Nice thread, really helped. Now I just need to find a Crypter..

**Humla** - August 13, 2012, 7:00 pm

On the last step i accidently deleted the "host name".

And can't figure it.

Any kind soul wanna tell me what to type in that field?

**razem** - August 13, 2012, 10:42 pm

Nice tutorial, it was useful; keep it up.

**S k O r M** - August 14, 2012, 7:16 am

Very good tut dude, congrats ! Thank you for every beginners you helped !

**/bin/bash** - August 14, 2012, 7:13 pm

Hmmm, so I downloaded cybergate off this thread, as it came up in search first. I'm getting an error that says "Windows cannot find this file, or you may not have permissions to run it." [or some shit].

I've never had a problem running CG before. Really hoping that I'm not being trolled off this.

**snack** - August 15, 2012, 5:46 am

Thanks works perfect.

Best Regards.

**adarsh** - August 15, 2012, 5:07 pm

do I need to portforward? Im having a problem when i created it I tryed to test it out on me but it did not work..

**\*QuaRanTinE\*** - August 17, 2012, 8:27 am

Im guessing this has been tested right? It was a good TuT nonetheless. Some pictures next time would make it easier to follow tho :)

**Doniu** - August 23, 2012, 12:41 pm

Very nice thanks! Really helped me!!!

**coling123** - August 23, 2012, 10:27 pm

What control center are you talking about? In the bottom left of the computer, when i check for options there I have internet, folder, and indexing options. Sorry i'm new :P

**lucz0rr** - August 24, 2012, 11:42 am

my server gives app crash :\  
please can you help me followed tut 100%

**emile** - August 24, 2012, 6:05 pm

Thanks for the tutorial helped me setting up my rat.  
The only problem is that when I use webcam capture it crashes (the slave).

**halomaster369** - August 25, 2012, 7:45 pm

i get a bunch of errors when i try to infect myself.

**hackerpiet** - August 26, 2012, 4:36 pm

thank you very much! i only have 1 question.

is it FUD if i follow these steps?

**cashpile** - August 27, 2012, 5:58 pm

I tried running this on myself with all antivirus and firewalls down and nothing happened, anybody know whats wrong?

**sk1ttlez** - August 28, 2012, 5:58 pm

hey can some1 help me please i have portforwarded it all right but nothing is coming up can some1 please help me thanks :)

**cod3dbobY** - August 28, 2012, 7:27 pm

i tried to download the rat but it's nt working pls.. i need latest rat brother  
Bro.. itworks,,, but i need Fud to encrypt it pls help me with the link

**Milfan** - August 31, 2012, 10:37 am

I still have got problem with port forwarding, it just doesnt work :(

**Jooney Trell** - August 31, 2012, 6:09 pm

The DL isn't safe, MBAM detected it as a keylogger. Download it with caution.

**anonymark** - September 1, 2012, 4:18 am

thx mate this was awesome but wana know more abt taht ...

Q: once i created & sent that server whoever I wish then i shut down the system ..is that necessary to be online all the time ...or i have to create new server all the time ...

**SIM-899646** - September 1, 2012, 6:05 am

I go to control center > DNS Console > enter my info > click update then I get this error: "[4:01:56 PM] Error : Invalid username"..(Even though it is correct username) could anyone help me please?

**VoxPopulis** - September 1, 2012, 9:35 pm

I have not been able to find a "clean" copy of Cybergate, all the links I find are either dead or someone trying to infect you. Would sincerely like some help finding a proper link.

**driffter82** - September 3, 2012, 6:14 am

Great stuff! Works good. Files from here are mainly detected by AV. What else do you expect in Hack forum? Use a sandbox if you are afraid!

**mollymac** - September 3, 2012, 6:47 am

Having a problem wen server is finished! it gives a error MSVCR100.dll - MOZCRT19.dll - plds4.dll not found? anyone else have this problem?  
thanks

**driffter82** - September 3, 2012, 2:36 pm

The links are detected because Cybergate is detected and it is not any one trying to INFECT you. For proof download the latest Cybergate from the official site and scan it. Guaranteed it will be detected as-well!

Official Site Download link: [http://www.cyber-software.org/misc/CyberGate\\_v3.1.0.0-public.zip](http://www.cyber-software.org/misc/CyberGate_v3.1.0.0-public.zip)

**ahmadu** - September 4, 2012, 2:34 pm

Nice and Thnks for your great turtorial but how i can make my server uncatchable(clean)

**Weelchair** - September 6, 2012, 1:10 pm

I've a problem... remote desktop gives quality of 1, should it not be 50?

**sine99998** - September 9, 2012, 4:14 pm

(Aug 12, 2012 08:37 AM)PosionAvy Wrote: [\[CITE\]](#) when i start my server.exe it shows following errors :

mozglue.dll  
nspr4.dll  
plc4.fl  
mozsqlite3.dll  
nssutil3.dll  
missing.

i even tired reinstalling and restarting. What do i do?

Same thing here. all of these dll files are missing.however i can find my server running in the task manager of the slave.but nothing shows up on my cybergate panel.anyone knows how to fix that?

**Leonard Inc** - September 10, 2012, 7:19 am

where is the control center???

**Blue Art** - September 10, 2012, 11:56 am

Error: I could not see your service on 2.219.139.162 on port (82)  
Reason: No route to host

i got this :(

Error: I could not see your service on 2.219.139.162 on port (82)  
Reason: No route to host

i got this :(

**AWAIS113** - September 11, 2012, 3:58 pm

Thanks man love you non of other software working you are charm dude keep it up

**Dimebag82** - September 11, 2012, 5:17 pm

Stay clear from anything off 4shared or 2shared. Pretty much impossible to find a clean copy of cybergate or dark comet.

**UnKnowN112** - September 12, 2012, 8:15 am

How would you like un-infect that computer when it gets infected?  
Remotely also please

**panda911** - September 12, 2012, 8:19 am

(Sep 12, 2012 08:15 AM)UnKnowN112 Wrote: [\[CITE\]](#) How would you like un-infect that computer when it gets infected?  
Remotely also please  
if you right click the server there should be a uninstall button

**ChRoNiC™** - September 15, 2012, 6:47 pm

it could just be me being paranoid...but what does using your no-ip username and password have anything to do with the connections as long as you are using your actual host...unless it's backdoored.

**TheMotion** - September 16, 2012, 11:43 pm

Okay, so I have the servers and all set up, but how do I keep it from being detected by my target's antivirus?

**257207954** - September 17, 2012, 1:05 pm

Where is the file your gonna send to other ? I cant find it ;(

**JulianV** - September 18, 2012, 8:09 am

it says that mozglue.dll is missing. any solutions?

**Tom Black** - September 18, 2012, 1:22 pm

Thank you forrthis nice Tut!  
It has helped me very much :)

**asetobaron** - September 19, 2012, 5:10 pm

awesome tut bro.. keep it up... thumbs up for you..

**hit them off** - September 20, 2012, 10:47 pm

Nice Tutorial Right HERE HQ User Right HERE

**rickyross** - September 22, 2012, 3:51 am

Nice tut, I need to know if it is easy binding cybergate to a picture file without it showing as an application file. Also does the keylogger record every key stroke from the v\*ct\*m's end?

Please who has the latest version of cybergate and who knows the best crypter for it?...Thanks

**Goldman4** - September 23, 2012, 2:46 pm

cool thanks for it ! :) it was helpful

**Oodos54** - September 23, 2012, 3:11 pm

This is one of the best tutorials on the net, hands down!

**Mostin** - September 25, 2012, 8:34 am

Thanks for the easy to use Tutorial :), Nice and easy setup.

**BlackEvil** - September 29, 2012, 4:02 am

thanks bro nice tut , easy for beginners ?

**ranvijaysingh4** - September 29, 2012, 4:43 am

Hi Bro,

I have successfully created the Cybergate server file and crypted it. It is FUD now and not detected by any Antivirus and it is working fine on first execution... it is showing the Slave's desktop, logs everything but when the slave restarts his system the server does not get executed... it stops after the slave system is restarted once.... please help me on this issue...

Please add me on skype my ID is rodeojaxx, what is your skype ID?

Regards,  
Ranvijay

**Dimebag82** - September 30, 2012, 1:05 am

Yeah, you have to know if the crypter's startup function works properly. Sometimes you have to make sure the startup option is setup through cybergate in order for it to work with your crypter. A lot of these guides for RATs/crypters don't apply to all crypter's. I know for mine, it's .net based and it works with cybergate being setup normally, whereas some other crypters say you should have a very basic, bare bones server.

**DrZaZgA** - October 7, 2012, 7:56 pm

This was amazing, only thing you need to work on is to make or get a crypter to encrypt it before sending it out.

**ranvijaysingh4** - October 9, 2012, 8:54 pm

Hi... Please suggest me a good Crypter for Cybergate... I would also like to know how to set up Dark Comet... I have been struggling on it for many days, I have created the server but I am not able to test it.... I want to test it on myself first....

I have heard that Dark Comet is more stable than Cybergate and since Cybergate is .net based so if the Slave does not have .net framework 3.5 or above, the server will not execute...

Your help is highly appreciated... thanks in advance...

Ranvijay

**pideerman** - October 18, 2012, 5:57 am

Thaankss for this sick tutorial ;))

**Phoenix2058** - October 20, 2012, 6:06 am

HEy, first thanks for that nice tutorial!

But i have a problem, i did everything right, NO-IP is running, ports are forwardred (i checked with canyouseeme.org) the server and cybergate have the same passwords, i checked all speeling and everythings right, but still my server doesn't connects, it doesn't when i try it on my own pc, and it also doesn't works when i try it on a friends pc :/

I'm really confused because i did all troubleshooting and i have no idea where the problem cloud be?

Hope anyone can help me!!

(btw. 2 years ago i had cybergate running on the exact same pc, same network, same ports and everything was running well...)

**Justproness** - October 20, 2012, 5:07 pm

It would be great if there was some pictures :-D!

But nice TUT! :-)

**Atharva** - October 29, 2012, 11:28 pm

Thank you ! I make a RAT

Keep helping others !

**shadey960** - November 12, 2012, 11:58 am

thnks do this is a awesome tut but they are rite about the pics

**SIM-1241186** - November 12, 2012, 12:02 pm

Already know how to do this, not into ratting much anymore, but thanks for the tutorial. Cybergate is a tad annoying sometimes if not done right lol.

**The Black Knight** - November 13, 2012, 9:43 am

hey does anyone know what the port ranges of this rat and also if you would use the 82 in the ip adress? if anyone knows please pm me

**peacedink** - November 19, 2012, 8:31 am

thank you very much for this tutorial!

**turfy0** - November 19, 2012, 3:35 pm

I cant find control center, any help?

**ranvijaysingh4** - November 20, 2012, 7:19 am

I was able to set up Cybergate successfully, however, when the slave computer is restarted I lose them, any suggestions on this.... moreover the antivirus detects it and kills it very often even if the file is crypted...

**cyb3rzone** - November 20, 2012, 7:23 am

(Nov 20, 2012 08:19 AM)ranvijaysingh4 Wrote: [\[CITE\]](#) I was able to set up Cybergate successfully, however, when the slave computer is restarted I lose them, any suggestions on this.... moreover the antivirus detects it and kills it very often even if the file is crypted...

Pm me your skype i can help you on that ?

**Grand** - November 23, 2012, 2:19 pm

Thanks, first CyberGate rat setted up.  
I Want slaves!!!

**sandman1234** - November 23, 2012, 2:34 pm

Ty man i just used and set up my rat. TY

**BashMAN** - November 29, 2012, 10:46 am

thank you very much for this tutorial!

**syntax17** - November 29, 2012, 1:00 pm

You Bind youre own RAT with the file GG

**Fletcher** - November 29, 2012, 4:54 pm

Nice Tutorial, add pics please to be more detailed.

**jdmllover145** - December 23, 2012, 11:19 pm

Slaves do not show up... help me please!!!

**Clark Kent™** - December 24, 2012, 5:05 am

Sweet thanks for this tutorial :) Very useful

**SouqIRS** - December 26, 2012, 12:07 am

where's control center.. ??12#?@!#?

**sshadow31** - December 26, 2012, 9:48 am

thanks a lot?????

**Haslaa** - December 28, 2012, 12:40 pm

Amazing man, this helped me alot! Thanks.

**atomikz** - December 29, 2012, 7:51 am

Hi thanks for the tutorial , but atm i have a problem where it just app crashes whenever i try to open the server any help ?

Running windows 8 , tried compability etc no joy as yet :S

**targ489** - December 30, 2012, 7:14 pm

My slaves won't show up, guessing I'm doing something...?

**Astropid.META** - December 31, 2012, 1:50 am

(Jul 3, 2011 05:57 AM)m3llomatt82 Wrote: [\[CITE\]](#) NEVER EVER RUN THE SLAVE ON YOURSELF! Only run the slave on yourself if you do it in sandboxie, <http://www.sandboxie.com/> . Nothing against Cyber Terrorist. I believe most if not all copies of CG have a leech attached to the created server. When you send your server to a vic, their server gets loaded at the same time. They pick out the out your prime vics and leave you with the rest.

Well I guess too late for half the people on this thread

**Callisto89** - January 2, 2013, 7:39 pm

is the download is safe cause i know alot of them is virus itself. Around how much MB the REAL download is ?

**19ac85** - January 13, 2013, 4:51 pm

thanks this is useful thanks this is useful thanks this is useful

**fluid77** - January 15, 2013, 10:47 am

thank you, this worked with the first tryi ;)

**ikbantton** - January 19, 2013, 9:56 am

i followed the laid down instruction, after running the created server on my system, i wasnt able to see my own system

**Strychnos27** - February 3, 2013, 6:07 am

**cretinel4ever** - February 4, 2013, 11:44 pm

@Rushazoid PM me your mail, i will help u, it works smooth to me, yesterday configured my server, if u have yahoo messenger, i'll guide you via teamviewer!

**Dolphin.** - February 5, 2013, 3:15 pm

Nice and straight forward mate, nicely done.

**sligerman46** - February 5, 2013, 10:06 pm

Is this safe?

Looks dodgy and it's coming up as malware.

I did everything you said to do, and when I get someone to open the file, they dont pop up in my list. Help please?

**V.V.V.V.V** - February 15, 2013, 9:19 am

great tutorial . this helped my alot. Thanks :)

**Jet???** - February 19, 2013, 12:46 am

Nice tut, want to set it up someday soon I'll definitely have to come back to this thread.

**gilbennett** - February 24, 2013, 4:34 pm

How does CyberGate compare to DarkComet and others?

**sex13** - February 24, 2013, 6:12 pm

hi, please help me.

I have a problem in darkcomet..

when the no-ip preferences is in the windows default setting my darkcomet cannot connect but when I change to local network adapter it connect but only in my PC,, I tried to spread, the dark wont connect to my client, just the same with cybergate..

**coder\_brian** - March 4, 2013, 3:04 pm

This is helpful for me. Using this guide, thanks.

**general101** - March 15, 2013, 8:01 am

i successfully set up my rat and i wonder how its work? i tried to search my own host that i created in no-ip but it is unsearchable.

**dancer2007** - March 23, 2013, 1:13 am

thanx for great TUT!

Q; to use cybergate on ones computer you have to deactivate all securityprograms or else cybergate and my servers will be erased or set in cuarenteen right....so how to do this right i cant allways use my computer without all security right

**seirina** - March 24, 2013, 7:57 am

is normal the av detect this like malware??? im smelling baad things in it !!

**dancer2007** - March 24, 2013, 8:03 am

hmm we have to deactivate ALL security to even be able to download cybergate RAT and to save and keep our server.exe

but how do we do if we want to have security after download, i mean everyone wants that right...

regards

**seirina** - March 24, 2013, 8:21 am

(Mar 24, 2013 08:03 AM)dancer2007 Wrote: [\[CITE\]](#) hmm we have to deactivate ALL security to even be able to download cybergate RAT and to save and keep our server.exe
